

Reliable IICRC WRT Exam Testking - WRT Exam Duration

IICRC WRT Exam | Study Questions with Answers 2024 Guide

Wet concrete can be dried by applying heat energy - **Correct**

Answer - True

Drying a wet wall cavity by injecting air into it speeds - **Correct**

Answer - Evaporation

If the dew point changes, what 2 other humidity measurements change with it - **Correct Answer - Vapor pressure and humidity ratio**

What is the measurable force that vapor creates on the things around it - **Correct Answer - Vapor pressure**

What is the temperature at which air reaches 100% relative humidity and condensation can occur - **Correct Answer - Dew point**

BONUS!!! Download part of ITPassLeader WRT dumps for free: <https://drive.google.com/open?id=1k5cq58s04lk2gUkwwg4oRginzzUVwebJg>

We have three versions of WRT learning materials available, including PDF, Software and APP online. The most popular one is PDF version of WRT study guide can be printed into papers so that you are able to write some notes or highlight the emphasis. On the other hand, Software version of our WRT Practice Questions is also welcomed by customers, especially for windows users. As for PPT online version, as long as you download the app into your computer. You can enjoy the nice service from us.

The learners' learning conditions are varied and many of them may have no access to the internet to learn our WRT study question. If the learners leave home or their companies they can't link the internet to learn our WRT test pdf. But you use our APP online version you can learn offline. If only you use the WRT study question in the environment of being online for the first time you can use them offline later. So it will be very convenient for every learner because they won't worry about anywhere to learn our WRT exam practice materials.

Free Download IICRC WRT: Reliable Water Damage Restoration Technician (WRT) Exam Testking - Trustable ITPassLeader WRT Exam

Duration

Our WRT practice questions are undetected treasure for you if this is your first time choosing them. These advantages help you get a thorough look in details. First of all, the price of our WRT exam braindumps is reasonable and affordable, no matter the office staffs or the students can afford to buy them. Secondly, the quality of our WRT Study Guide is high. You can just look the pass rate of our WRT training quiz, it is high as 98% to 100%.

IICRC Water Damage Restoration Technician (WRT) Sample Questions (Q78-Q83):

NEW QUESTION # 78

If the ambient temperature is below 50°F, what is the most effective type of dehumidifier to use when drying a structure?

- A. Conventional dehumidifier
- B. Low-grain refrigerant dehumidifier
- C. Gas bypass dehumidifier
- D. Desiccant dehumidifier

Answer: D

Explanation:

The IICRC WRT body of knowledge states that desiccant dehumidifiers are the most effective option when ambient temperatures fall below approximately 50°F. Refrigerant-based dehumidifiers rely on condensation at cold coils and become inefficient or inoperative at lower temperatures due to coil icing and reduced moisture removal capacity.

Desiccant systems remove moisture through adsorption, a chemical bonding process that is not dependent on air temperature. This allows desiccants to perform effectively in cold environments where refrigerant units fail.

The WRT manual highlights desiccants as the preferred solution for cold structures, unheated buildings, winter losses, and Class 4 drying scenarios. Gas bypass and LGR units extend the operating range of refrigerants but still have temperature limitations.

Selecting the correct dehumidifier type based on ambient conditions is a core competency under the WRT standard and ensures efficient, defensible drying.

NEW QUESTION # 79

How many gallons (liters) are present in a 20-foot by 25-foot basement with standing water at a depth of 4 feet 6 inches (1.37 meters)?

- A. 18,765 gallons (71,033 liters)
- B. 16,830 gallons (63,713 liters)
- C. 2,250 gallons (8,517 liters)
- D. 15,750 gallons (59,620 liters)

Answer: A

Explanation:

The IICRC WRT body of knowledge stresses the importance of accurately estimating the volume of standing water to support proper extraction planning, equipment selection, and safety evaluation. This question requires a volumetric calculation using length, width, depth, and standard water conversion factors.

First, calculate the cubic volume of water:

$20 \text{ ft} \times 25 \text{ ft} \times 4.5 \text{ ft} = 2,250 \text{ cubic feet of water.}$

According to WRT reference tables, 1 cubic foot of water equals approximately 8.34 gallons. Multiplying:

$2,250 \text{ cubic feet} \times 8.34 \text{ gallons/cu ft} = 18,765 \text{ gallons (rounded).}$

This calculation confirms option A as correct. The WRT curriculum includes these conversions to help restorers assess extraction time, pump capacity, disposal logistics, and safety hazards such as hydrostatic pressure or structural loading.

Understanding water volume is not merely academic. Large volumes of standing water significantly affect drying timelines, contamination potential, and classification decisions. The ANSI/IICRC S500 Standard emphasizes prompt and adequate bulk water removal as a critical first step in mitigation.

Accurate water-volume estimation also supports documentation and communication with materially interested parties, ensuring that restoration actions are technically justified and defensible.

NEW QUESTION # 80

What is it called when moisture causes wood flooring to expand, resulting in the edges being higher than the center across the width of the board?

- A. Crowning
- **B. Cupping**
- C. Buckling
- D. Delaminating

Answer: B

Explanation:

Cupping is the correct term used in the IICRC WRT body of knowledge to describe a condition where wood flooring expands due to moisture, causing the edges of each board to rise higher than the center. This deformation occurs because moisture is absorbed unevenly—typically from below—causing differential expansion across the board's thickness.

The WRT manual explains that cupping is most commonly associated with moisture intrusion affecting subflooring or elevated humidity conditions beneath the flooring. As the underside of the board absorbs moisture, it expands more than the top surface, resulting in a concave shape across the width.

This condition is distinct from crowning, which is the opposite deformation where the center is higher than the edges, often occurring after sanding cupped floors before moisture equilibrium is restored. Buckling refers to extreme deformation where boards lift completely from the subfloor, and delamination applies to layered materials separating.

Understanding cupping is essential for restorers because it influences drying strategy, expectations, and post-drying recommendations. The WRT standard emphasizes careful moisture control and adequate acclimation time to allow wood flooring to return as close as possible to its original profile before repairs or refinishing are attempted.

NEW QUESTION # 81

When should carpet cushion (pad, underlay) be removed and discarded?

- A. If it is installed over plywood subflooring
- B. If it has a porous membrane or "skin"
- C. If it is a synthetic felt cushion
- **D. If it is affected with Category 2 or Category 3 water**

Answer: D

Explanation:

The IICRC WRT body of knowledge states that carpet cushion (pad, underlay) must be removed and discarded when affected by Category 2 or Category 3 water. Carpet cushion is a porous material that readily absorbs and retains contaminants, making effective cleaning and decontamination impractical under these conditions.

The WRT manual explains that even if the overlying carpet may be cleanable in some situations, cushion acts like a sponge and can harbor microorganisms, nutrients, and moisture deep within its structure. Attempting to dry or disinfect contaminated cushion poses a health risk and increases the likelihood of secondary damage or odor problems.

While certain cushion types (such as synthetic felt or cushions with skins) influence restorability in Category 1 losses, contamination level takes precedence. The presence of Category 2 or 3 water alone is sufficient to require removal, regardless of cushion construction or subfloor type.

This guidance reflects the WRT emphasis on protecting occupant health and preventing hidden contamination. Removing and discarding contaminated cushion is considered the appropriate and defensible standard of care.

NEW QUESTION # 82

When should water damage restoration services begin?

- A. After equipment and consumables arrive on-site
- B. After the damage survey has been submitted
- C. After the drying standard has been determined
- **D. After a restorer entered into a properly written contract**

Answer: D

Explanation:

The IICRC WRT body of knowledge states that water damage restoration services should begin after a restorer has entered into a properly written contract with the property owner or authorized representative.

This ensures that scope, responsibilities, authorization, and limitations are clearly defined before work begins.

While emergency actions may be necessary to prevent imminent damage, the WRT standard emphasizes the importance of legal and professional authorization prior to performing restoration services. A written agreement protects both the restorer and the client by establishing expectations, access rights, and documentation requirements.

Submitting surveys, delivering equipment, or determining drying standards are procedural steps that occur after authorization is secured. Beginning work without authorization exposes the restorer to liability and disputes.

This requirement aligns with the WRT emphasis on professionalism, transparency, and defensibility.

NEW QUESTION # 83

.....

You can enter a better company and improve your salary if you have certificate in this field. WRT training materials of us will help you obtain the certificate successfully. We have a professional team to collect the latest information for the exam, and if you choose us, you can know the latest information timely. In addition, we provide you with free update for 365 days after payment for WRT Exam Materials, and the latest version will be sent to your email address automatically.
