information in order to learn more. Ind-Dev-201 training materials can meet all your needs. What are you waiting for?

Salesforce Certified Industries CPQ Developer Sample Questions (Q252-Q257):

NEW QUESTION # 252

Which two custom settings need to be set to true in order to avoid passing large sets of items to the configuration rules and the pricing engine?

Choose 2 answers

- A. Cache API Fields
- **B. Delta Validate**
- C. Delta Price
- **D. Cache API Time To Live In Days**

Answer: B,D

Explanation:

To troubleshoot issues related to API cache jobs in Salesforce Industries CPQ, the developer should: A. Run Refresh Platform Cache: This clears and refreshes the cache, which can resolve issues stemming from stale or corrupted cache data. D. Run Load API Metadata: This action ensures that all necessary metadata for APIs is correctly loaded and up-to-date, which is crucial for the proper functioning of API-dependent processes.

These actions help in ensuring that the platform's backend processes are synchronized and functioning correctly, thereby resolving issues related to API performance or data integrity.

NEW QUESTION # 253

Document sections within a Vlocity Document Template can be conditionally included based on which two items?

Note: This question displayed answer options in random order when taking this Test.

- A. Products
- B. Browser Version
- **C. Advanced Entity Filters**
- **D. Merge codes**

Answer: C,D

Explanation:

In Salesforce Industries (Vlocity) document templates, document sections can be conditionally included based on Advanced Entity Filters and Merge Codes. Advanced Entity Filters allow the template to include or exclude sections based on specific data points or criteria related to the entities being used in the document (e.

g., customer data, product types). Merge Codes are placeholders in the template that dynamically pull in data or content based on the underlying data model and specific conditions, allowing for highly customized and relevant document generation.

NEW QUESTION # 254

How should the developer configure the products to support these requirements following best practices?

- **A. Create a Color attribute and assign it to an object type. Create products for each phone using the object type, and override the inherited Color attribute's picklist with a custom picklist.**
- B. Create Product2 record types for each phone. Create a Color attribute and assign it to the record types. Create global picklist for each set of possible colors, and assign the picklist to the record types.
- C. Create a Color formula field on the Product2 object. Use a function to display different values depending on a product code lookup.
- D. Create an object type for each phone. Create a Color attribute, and assign it to each of the object types. On each object type, override the default picklist with custom picklist.

Answer: A

Explanation:

For configuring products to support various colors in a flexible and scalable manner, it's best to create a Color attribute and assign it to an object type. Then, create products for each phone using this object type. By overriding the inherited Color attribute's picklist with a custom picklist for each product, the developer can ensure that each phone model can have its unique set of available colors. This approach leverages Salesforce's object and attribute functionality to maintain clean data structures while allowing for customization at the product level.

NEW QUESTION # 255

Choose the accurate statement below.

- A. Existing customer assets must be marked as assetizable
- **B. Products can be set as non*assetizable**
- C. Setting a product as not assetizable ensures that the product is offered
- D. asa promotion to customers

Answer: B

Explanation:

* A. Products can be set as non-assetizable: In Salesforce Industries CPQ, products can be configured as non-assetizable. This means they do not become customer assets upon purchase. This setting is used for products that do not require post-sale services or tracking as assets, such as disposable items or those that do not require installation or maintenance.

NEW QUESTION # 256

What must a developer set to allow a user to modify an attribute in the Cart's configuration window?

- **A. Run-time Configurable property**
- B. Active property
- C. Filterable property
- D. Not Hidden property

Answer: A

Explanation:

To allow a user to modify an attribute in the Cart's configuration window in Salesforce Industries CPQ, a developer must set the "Run-time Configurable property" for that attribute. This property enables the attribute to be edited during the configuration process within the cart, providing flexibility to the end-user to customize product specifications or choices directly from the cart interface. This is crucial for scenarios where product configurations need final adjustments before completing the order.

NEW QUESTION # 257

.....

Are you still worried about not passing the Ind-Dev-201 exam? Do you want to give up because of difficulties and pressure when reviewing?
