1z0-1077-25 Study Materials Review | 1z0-1077-25 Latest Exam Materials

In the process of preparing the passing test, our 1z0-1077-25 guide materials and service will give you the oriented assistance. We can save your time and energy to arrange time schedule, search relevant books and document, ask the authorized person. As our study materials are surely valid and high-efficiency, you should select us if you really want to Pass 1z0-1077-25 Exam one-shot. With so many advantages of our 1z0-1077-25 training engine to help you enhance your strength, would you like have a look at our process of using 1z0-1077-25 study materials?

Oracle Order Management Cloud Order to Cash 2025Implementation Professional Sample Questions (Q56-Q61):

NEW QUESTION # 56
Your company has a requirement to transform sales orders imported from a legacy system into cloud.
Which Oracle Business Rule component determines the specific rule that will be used to transform the imported orders?

- A. Rule Conditions

- B. Rule Actions
- C. Facts
- D. Rule Dictionary

Answer: A

Explanation:
Rule conditions are the Oracle Business Rule component that determines the specific rule that will be used to transform the imported orders.Oracle Business Rules are a set of logic statements that define the behavior of an application or a process, such as order transformation, order orchestration, or order approval1. A rule consists of two parts: a condition and an action. A rule condition is a statement that evaluates to true or false based on the input data, such as order attributes, order lines, or order status.A rule action is a statement that performs a specific task or operation when the rule condition is true, such as updating order attributes, creating order lines, or changing order status2.You can use the Manage Order Transformation Rules task to define the rule conditions and actions for transforming the imported orders from a legacy system into Oracle Order Management Cloud3.

Manage Order Transformation Rules

NEW QUESTION # 57
Identify the sequence of Oracle Management Cloud components involved while processing a sales order.

- A. External Source Systems, Order Entry, Orchestration, External Interface Layer, Task Layer Services
- B. External Source Systems, Internal Systems, Orchestration, Task Layer Services, External Interface Layer
- C. External Source Systems, Order Entry, Orchestration, Task Layer Services, External Interface Layer
- D. Order Entry, Orchestration, Task Layer Services, External Interface Layer

Answer: D

NEW QUESTION # 58
Your company wants to default the preferred fulfillment warehouse and scheduled ship date as order requested date during order import and skip the scheduling task for a particular order type.
What are the two business rules that must be configured to achieve this requirement? (Choose two.)

- A. Define a compensation pattern rule.
- B. Define a lead time expression rule.
- C. Define a line selection criteria rule for the scheduling task.
- D. Define a branching condition rule.
- E. Define a pre-transformation defaulting rule.

Answer: C,E

NEW QUESTION # 59
You have a requirement to configure a different user interface (UI) depending on the user accessing it.
For one hosting application, you want a full-featured interface where users can select all options. These users have product knowledge and, therefore, do not need to be guided as much.
For the other hosting application, you want a more guided interface that takes the users through each step and hides some of the product details that may be confusing.
How can you do this?

- A. By doing nothing. You cannot have more than one UI based on different applications that are accessing it. All users will have to use the more simplified method.
- B. By building a Configurator rule that shows different options based on the application that is accessing
- C. By building two separate user interfaces and for each UI and selecting the corresponding application under Applicability Parameters in the user interface setup
- D. By using Dynamic Tree Navigation and making the first question that users are prompted with to be related to the interface that they want to use

- E. By bullding this using different languages; for example, you can have the first hosting application to provide access by using American English and the second hosting application to provide access by using British English

Answer: C

Explanation:
By building two separate user interfaces and for each UI and selecting the corresponding application under Applicability Parameters in the user interface setup.
This answer is correct because it allows you to create different user interfaces for different hosting applications, and control the visibility and behavior of each UI based on the applicability parameters.You can use the User Interface Setup task in the Setup and Maintenance work area to create and manage user interfaces for Oracle Order Management Cloud Order to Cash1.
The other answers are incorrect for the following reasons:
* By building this using different languages; for example, you can have the first hosting application to provide access by using American English and the second hosting application to provide access by using British English: This answer is incorrect because using different languages does not change the user interface design or functionality. It only changes the language of the labels and messages that are displayed to the user.
* By doing nothing. You cannot have more than one UI based on different applications that are accessing it. All users will have to use the more simplified method: This answer is incorrect because you can have more than one UI based on different applications that are accessing it.You can use the applicability parameters to specify the hosting application for each UI, and the order of precedence to determine which UI to display when there are multiple matches1.
* By using Dynamic Tree Navigation and making the first question that users are prompted with to be related to the interface that they want to use: This answer is incorrect because Dynamic Tree Navigation is a feature that enables you to create a guided selling experience for configurable products.It does not allow you to create different user interfaces for different hosting applications2.
* By building a Configurator rule that shows different options based on the application that is accessing:
This answer is incorrect because Configurator rules are used to define the logic and constraints for configurable products.They do not allow you to create different user interfaces for different hosting applications3.

NEW QUESTION # 60
Your procurement organization has a requirement to include order information from a sales order with their purchase order documents. Service mappings can be used to help meet their specific integration requirements for their supply chain tools.
If you need to integrate objects from a sales order with a purchase order, which three supply chain modules would be required?

- A. Supply Chain Orchestration Cloud
- B. Supply Planning Cloud
- C. Business Process Management Cloud
- D. Order Management Cloud
- E. Procurement Cloud

Answer: A,D,E

Explanation:
Service mappings are used to integrate Order Management with other Oracle applications by mapping attributes from a sales order to a purchase order. Service mappings enable you to pass order information from a sales order to a purchase order document, such as supplier, item, quantity, price, and so on. To use service mappings, you need three supply chain modules: Supply Chain Orchestration Cloud, Procurement Cloud, and Order Management Cloud. Supply Chain Orchestration Cloud is the module that creates and manages the purchase order document based on the sales order information. Procurement Cloud is the module that provides the functionality to manage suppliers, purchase agreements, and requisitions. Order Management Cloud is the module that captures and fulfills the sales order.
