VMware 2V0-11.24 Exam Syllabus Topics:

Topic	Details
Topic 1	• User Interface: This section of the exam measures the skills of Lightning Developers and covers UI customization using Visualforce pages, Lightning Components, and Flow. Candidates must understand how to securely display and modify Salesforce data through controllers or extensions while ensuring protection against security vulnerabilities. The section also evaluates knowledge of Lightning Web Components, event handling, and best practices for creating custom UI components. Additionally, it assesses the ability to integrate Apex with various UI elements such as Lightning Components, Flow, and Next Best Actions.

Topic 2	• Testing, Debugging, and Deployment: This section of the exam measures the skills of Salesforce DevOps Engineers and focuses on writing and executing tests for triggers, controllers, and automation processes. Candidates should understand how to utilize Salesforce Developer tools like Salesforce DX, CLI, and Developer Console for troubleshooting. The section also covers debugging strategies for monitoring flows, processes, and asynchronous jobs. Furthermore, it evaluates knowledge of different deployment environments, requirements, and best practices for releasing code and configurations efficiently.
Topic 3	• Process Automation and Logic: This section of the exam measures the skills of Apex Developers and focuses on the capabilities of declarative process automation tools and Apex programming. It includes defining variables, constants, and methods while understanding the use of modifiers and interfaces. Candidates must be able to apply control flow statements, write SOQL, SOSL, and DML statements, and follow best practices for Apex classes and triggers. The section also assesses knowledge of governor limits, transaction management, execution order, and recursion. Additionally, candidates should be able to implement error handling using standard and custom exceptions.
Topic 4	• Developer Fundamentals: This section of the exam measures the skills of Salesforce Developers and covers key concepts such as multi-tenant architecture, MVC framework, and the Lightning Component Framework. It evaluates the ability to differentiate between declarative and programmatic customization approaches while considering governor limits, formula fields, and roll-up summaries. Candidates must demonstrate proficiency in defining data models, including objects, fields, relationships, and external IDs. Additionally, they should understand the best practices for importing and exporting data within development environments.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q14-Q19):

NEW QUESTION # 14

Which tool can be used to enable vSphere IaaS control plane in VMware Cloud Foundation?

- A. NSX-T
- **B. SDDC Manager**
- C. vSphere Client
- D. vRealize Operations

Answer: B

Explanation:

NSX-T does not handle enabling IaaS; it focuses on networking.

SDDC Manager is specifically designed for enabling IaaS control plane.

vRealize Operations does not manage the enabling of IaaS control plane.

The vSphere Client is used for management but not for enabling IaaS.

NEW QUESTION # 15

Which prerequisite must be fulfilled before deploying VMware Cloud Foundation?

- A. Software Updates

- **B. Proper Licensing**
- C. Network Configuration
- D. Documentation

Answer: B

Explanation:

While having documentation is helpful for guiding the deployment process, it is not a formal prerequisite for deployment.

While network configuration is critical for the deployment and operation of VMware Cloud Foundation, it is typically set up as part of the deployment process itself rather than a prerequisite.

While keeping software up to date is important for security and functionality, it does not serve as a prerequisite for the initial deployment of VMware Cloud Foundation.

Ensuring that you have the correct licenses is essential prior to deploying VMware Cloud Foundation. The deployment of VMware Cloud Foundation requires specific licensing to unlock features and capabilities across the various components, including vSphere, vSAN, NSX, and vRealize Suite. Without the appropriate licenses, the deployment may not function as intended or may be limited in functionality.

NEW QUESTION # 16

When troubleshooting the SDDC Manager deployment, which logs should be the primary focus?

- A. vSAN Logs
- B. NSX Logs
- **C. SDDC Manager Logs**
- D. vCenter Logs

Answer: C

Explanation:

SDDC Manager logs provide detailed information about the deployment process.

vSAN logs are related to storage and do not focus on SDDC Manager.

NSX logs focus on network configurations, not SDDC deployment.

vCenter logs are relevant but not specific to SDDC Manager operations.

NEW QUESTION # 17

When deploying a vSAN cluster, what is a critical step?

- **A. Validate Hardware**
- B. Configure Networks
- C. Deploy Cluster
- D. Backup Settings

Answer: A

Explanation:

Backup settings are important but not critical to initial deployment. You cannot deploy the cluster without ensuring prerequisites are met. It's essential to validate hardware compatibility before deployment. Network configuration is not the first step in vSAN deployment.

NEW QUESTION # 18

What is a key benefit of using APIs for managing VMware Cloud Foundation?

- A. Increased Costs
- **B. Increased Efficiency**
- C. User Training
- D. Complexity

Answer: B

APIs can reduce complexity when integrated properly.
While user training is important, it is not the main benefit of APIs.
APIs allow for faster and more efficient management of resources.
Using APIs does not necessarily increase costs; it often reduces them.
