Get 2025 Update VCP-VCF 2V0-17.25 Dumps To Study The Latest Questions

flexibility. Can be deployed in a Simple or Highly Available Cluster deployment. Recommended deployment is a HA Cluster.... Simple deployment is for test/dev environments, it is not for production use cases."

By contrast, HA/clustered models increase resources to provide redundancy at scale. Since the requirement is the smallest resource footprint, the Simple model is the correct selection.

(Stretched/Continuous Availability options are not listed VCF Operations models in this context.)

6.An administrator is tasked to deploy a new vSAN Storage Cluster to an existing VCF instance. The VCF instance is deployed as a single workload domain.

What must the administrator do to achieve this without deploying additional management components?

- A. Deploy an additional VCF instance and workload domain with a vSAN storage cluster.
- B. Deploy additional hosts as vSAN storage-only nodes within the existing cluster.
- C. Deploy a second cluster as a vSAN storage cluster in the existing workload domain.
- D. Deploy an additional workload domain with a vSAN storage cluster within the existing VCF instance.

Answer: C

Explanation:

Comprehensive and Detailed

The VCF 9.0 Architecture and Deployment Guide explains that within a single Workload Domain, administrators can scale resources by adding additional clusters, including compute or vSAN storage clusters. Specifically, "A Workload Domain can contain multiple clusters. You can deploy a new cluster, such as a vSAN cluster, into an existing domain without introducing new management components." . Options A and D both introduce new workload domains or VCF instances, which require their own management stack (vCenter, NSX Manager, etc.) and are unnecessary in this scenario. Option B is incorrect because "vSAN storage-only nodes" are supported in vSAN but are not the method for adding a new cluster within VCF automation. The correct approach is deploying a second cluster inside the same workload domain—this reuses the existing management components while meeting the requirement for a new vSAN storage cluster.

7.Which two types of group can be created to collect and manage objects in Istio Service Mesh? (Choose two.)

- A. Security
- B. Cluster
- C. Service
- D. API
- E. Node

Answer: B, C

Explanation:

Comprehensive and Detailed

The Istio integration in VCF 9.0 defines two main logical groupings for organizing workloads within a service mesh: Cluster groups and Service groups. The documentation notes: "Cluster groups allow you to organize and manage objects across different Kubernetes clusters. Service groups let you aggregate and manage services that share common policies, routing rules, or observability requirements." . These groups enable administrators to apply consistent service mesh policies across multiple deployments and clusters. They also simplify administration by centralizing traffic management, routing,

We did not gain our high appraisal by our 2V0-11.25 exam practice for nothing and there is no question that our 2V0-11.25 practice materials will be your perfect choice. First, you can see the high hit rate on the website that can straightly proved our 2V0-11.25 study braindumps are famous all over the world. Secondly, you can free download the demos to check the quality, and you will be surprised to find we have a high pass rate as 98% to 100%.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details

Topic 1	• Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 2	• Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.
Topic 3	• VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 4	• Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 5	• IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.

Overcome Exam Challenges with 2V0-11.25 VMware 2V0-11.25 Exam Questions

Nowadays the requirements for jobs are higher than any time in the past. The job-hunters face huge pressure because most jobs require both working abilities and profound major knowledge. Passing 2V0-11.25 exam can help you find the ideal job. If you buy our 2V0-11.25 test prep you will pass the 2V0-11.25 Exam easily and successfully, and you will realize you dream to find an ideal job and earn a high income. Our 2V0-11.25 training braindump is of high quality and the passing rate and the hit rate are both high as more than 98%.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q97-Q102):

NEW QUESTION # 97

An administrator is tasked with enabling Workload Management (vSphere Supervisor) on a VMware Cloud Foundation (VCF) workload domain using the SDDC Manager UI.

Which three are prerequisites for enabling Workload Management? (Choose three.)

- A. Verify at least one NSX Edge cluster is deployed and available.
- B. Verify that the cluster is running vSAN.

- C. Verify all hosts within the selected Sphere clusters have the proper vSphere with Tanzu licensing to support Workload Management.
- D. Verify that the vSphere Distributed Switch is configured with sufficient port groups.
- E. Verify at least one Content Library is available.

Answer: A,C,D

Explanation:

The official documentation for enabling Workload Management (vSphere Supervisor) on a VCF workload domain requires the following prerequisites:

Verify that the vSphere Distributed Switch is configured with sufficient port groups (A):The vSphere Distributed Switch must have the appropriate port groups created and configured to support the networking requirements of the Supervisor Cluster.

Verify all hosts within the selected Sphere clusters have the proper vSphere with Tanzu licensing to support Workload Management (C):All ESXi hosts in the target cluster must have vSphere with Tanzu licensing to enable and use Workload Management features.

Verify at least one NSX Edge cluster is deployed and available (D):NSX Edge cluster is necessary to provide network services, including load balancing and routing, which are required for the Supervisor Cluster.A content library is not a prerequisite for enabling Workload Management, and while vSAN is commonly used, it is not a strict requirement for all configurations of Supervisor Clusters.

NEW QUESTION # 98

An administrator needs to delete and re-deploy an NSX Edge cluster that was originally deployed from SDDC Manager and has downloaded the edge cleaner tool.

Where should the administrator run the tool to complete this task?

- A. On the NSX Manager VM.
- B. On the SDDC Manager VM.
- C. On the Edge cluster node VM(s).
- D. On the Cloud Builder VM.

Answer: C

Explanation:

The NSX Edge Cleaner tool is typically run on the Edge cluster node VM(s) to clean up the previous configuration and ensure that the node(s) are properly removed before re-deploying the NSX Edge cluster. This process helps to reset the environment and remove any leftover configurations that may affect the re-deployment.

NEW QUESTION # 99

DRAG DROP

Match each vSphere HA host state issue with its troubleshooting step.

Answer:

Explanation:

A screenshot of a computer error AI-generated content may be incorrect.

Issues	Troubleshooting Steps
Host in Isolation Response	Verify network connectivity and HA isolation response sett
Host in Failover State	Ensure host is powered on and network is properly configu
Host in Unreachable State	Wait for HA to complete its initialization or check logs for e
Host in Initialization State	Check for sufficient resources on remaining hosts

NEW QUESTION # 100

Match each networking issue with the corresponding troubleshooting step.

Issues		Troubleshooting Steps
Host in Isolation Response		Examine NIC teaming and load balancing configuration
Host in Failover State		Verify the port group settings and VLAN configuration
Host in Unreachable State		Check physical network cables and switch port status

Answer:

Explanation:

Issues		Troubleshooting Steps
Host in Isolation Response	Host in Isolation Response	Examine NIC teaming and load balancing configuration
Host in Failover State	Host in Failover State	Verify the port group settings and VLAN configuration
Host in Unreachable State	Host in Unreachable State	Check physical network cables and switch port status

NEW QUESTION # 101

A company plans to enhance its DevOps practices by implementing Kubernetes as part of a VMware Cloud Foundation (VCF) environment.

Which three steps must an administrator perform to achieve this integration? (Choose three.)

- A. Configure Aria Automation to automate the deployment of Kubernetes clusters.
- B. Deploy HCX to migrate existing VMs to Kubernetes.
- C. Enable IaaS control plane on existing vSphere clusters.
- D. Deploy NSX to manage the networking for Kubernetes clusters.
- E. Configure storage policies for Kubernetes cluster namespace consumption.

Answer: C,D,E

Explanation:

You must enable the IaaS control plane (Workload Management/vSphere Supervisor) on your vSphere clusters via SDDC Manager to provide the Kubernetes control plane.

Defining storage policies ensures that your Kubernetes Namespaces can consume persistent storage that meets application requirements.

NSX must be deployed (and an Edge cluster available) to provide networking, load balancing, and security services for the Kubernetes Pods and control plane.

NEW QUESTION # 102

.....

Thousands of people will crowd into our website to choose the 2V0-11.25 study materials. So people are different from the past. Learning has become popular among different age groups. Our 2V0-11.25 guide questions truly offer you the most useful knowledge. You can totally trust us. We are trying our best to meet your demands. Why not give our 2V0-11.25 Practice Engine a chance? Our products will live up to your expectations.
