VMware 2V0-11.25 practice test questions of ValidVCE is the perfect choice for you. With our comprehensive 2V0-11.25 study material, you will be able to pass your 2V0-11.25 certification exam with ease. The basic motive of ValidVCE is to help students pass the 2V0-11.25 Exam on the first attempt. This also offers up to 365 days of free VMware 2V0-11.25 updates. And also helps you evaluate the product with a free 2V0-11.25 demo. Try a free 2V0-11.25 demo now and satisfy yourself.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.

Topic 2	• Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.
Topic 3	• IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 4	• Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 5	• Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

In seeking professional 2V0-11.25 exam certification, you should think and pay more attention to your career path of education, work experience, skills, goals, and expectations. The examinee must obtain the 2V0-11.25 exam certification through a number of examinations that are directly traced to their professional roles. Today, I will tell you a good way to pass the exam that is to choose 2V0-11.25 Exam Materials valid study questions free download exam training materials. It can help you to pass the exam. What's more, you choose 2V0-11.25 exam materials will have many guarantee.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30

An Administrator is tasked with setting up a new workload domain with VMware Cloud Foundation. The workload domain will have the following configuration:

vSphere with Tanzu to support Kubernetes workloads

NSX for container and virtual machine networking

Aria Operations will be configured for monitoring of the infrastructure Which three steps should be taken to complete the installation and configuration of this workload domain?

(Choose three.)

- A. Deploy the Supervisor Cluster for IaaS Control Plane.
- B. Integrate IaaS Control Plane with the existing vCenter Server.
- C. Enable workload management in vCenter Server.
- D. Install Aria Operations agents on all ESXi hosts.
- E. Configure NSX segments for Kubernetes namespaces.

Answer: A,C,E

Explanation:

NSX segments need to be configured for Kubernetes namespaces to provide network connectivity and isolation for the Kubernetes workloads that will be deployed.

The Supervisor Cluster must be deployed as part of the IaaS Control Plane to manage the Kubernetes workloads and enable vSphere with Tanzu.

Enabling workload management in vCenter Server allows the deployment and management of Kubernetes workloads alongside virtual machines, utilizing vSphere with Tanzu.

NEW QUESTION # 31

An organization is planning to manage a diverse set of databases across multiple VMware Cloud Foundation (VCF) environments using Data Services Manager.

Which three capabilities of Data Services Manager would help the organization managing these databases efficiently? (Choose three.)

- A. Automated database provisioning and deployment
- B. Integration with vSAN for optimized storage management
- C. Automated database migration between on-premises and cloud environments
- D. Policy-based backup and recovery for databases
- E. Centralized monitoring and alerting for all managed databases

Answer: A,D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Data Services Manager provides several key capabilities that help organizations efficiently manage databases across VMware Cloud Foundation environments. The official documentation describes the following functions:

Centralized monitoring and alerting for all managed databases (A): Data Services Manager offers a single pane of glass for monitoring health, usage, and generating alerts for all databases under management.

Policy-based backup and recovery for databases (C): The platform allows administrators to define policies for backup and restore operations, ensuring data protection and compliance across all managed databases.

Automated database provisioning and deployment (E): Administrators can automate the deployment, scaling, and lifecycle management of databases, streamlining the operational process.

While Data Services Manager integrates with VMware storage and supports operational automation, it does not provide built-in, automated migration between on-premises and cloud environments, nor does it specifically require direct integration with vSAN for its optimized storage management features.

NEW QUESTION # 32

Which vSphere component is essential for providing persistent storage to Kubernetes workloads deployed on IaaS Control Plane?

- A. Pod Service
D vSAN
- B. Container Image Virtual Disks
- C. Control Plane Storage Policy

Answer: A

Explanation:

The vSphere Pod Service is essential for providing persistent storage to Kubernetes workloads deployed on IaaS Control Plane (formerly vSphere with Tanzu). It enables the integration of Kubernetes with vSphere, allowing the creation of persistent volumes and the management of storage resources for Kubernetes workloads, ensuring that they can utilize vSphere's storage capabilities like vSAN.

NEW QUESTION # 33

Which VMware vSphere feature provides the ability to define and apply datastore capabilities to ensure virtual machines meet specific performance and availability requirements?

- A. Performance Service

- B. Storage Policies
- C. Host Profiles
- D. Storage Policy Components

Answer: B

Explanation:

Storage Policies in VMware vSphere allow administrators to define and apply specific storage requirements for virtual machines, ensuring they meet desired performance and availability standards. These policies enable the alignment of VM storage needs with the capabilities of the underlying datastores.

NEW QUESTION # 34

An administrator needs to ensure that their VMware Cloud Foundation-based private cloud solution can support multi-tenancy for different departments within their organization.

What two configurations and components are necessary to achieve this? (Choose two.)

- A. Use NSX to create isolated network segments for each tenant.
- B. Configure vSAN storage policies for each department.
- C. Deploy Aria Automation to enable self-service provisioning for tenants.
- D. Use vSphere Resource Pools to allocate resources to different departments.

Answer: A,D

Explanation:

vSphere Resource Pools allow for the allocation of CPU, memory, and storage resources to different departments (tenants) within the VMware Cloud Foundation environment. This ensures that each department has its own dedicated resources, preventing resource contention between them.

NSX can be used to create isolated network segments (logical networks) for each tenant, ensuring network security and segmentation between departments. Each department can have its own isolated network environment.
