Get 2025 Update VCP-VCF 2V0-11.25 Dumps To Study The Latest Questions

flexibility: Can be deployed in a Simple or Highly Available Cluster deployment. Recommended deployment is a HA Cluster.... Simple deployment is for test/dev environments, it is not for production use cases."

By contrast, HA/clustered models increase resources to provide redundancy at scale. Since the requirement is the smallest resource footprint, the Simple model is the correct selection. (Stretched/Continuous Availability options are not listed VCF Operations models in this context.)

6.An administrator is tasked to deploy a new vSAN Storage Cluster to an existing VCF instance. The VCF instance is deployed as a single workload domain.

What must the administrator do to achieve this without deploying additional management components?

- A. Deploy an additional VCF instance and workload domain with a vSAN storage cluster.
- B. Deploy additional hosts as vSAN storage-only nodes within the existing cluster.
- C. Deploy a second cluster as a vSAN storage cluster in the existing workload domain.
- D. Deploy an additional workload domain with a vSAN storage cluster within the existing VCF instance.

**Answer: C**

**Explanation:**

Comprehensive and Detailed

The VCF 9.0 Architecture and Deployment Guide explains that within a single Workload Domain, administrators can scale resources by adding additional clusters, including compute or vSAN storage clusters. Specifically, "A Workload Domain can contain multiple clusters. You can deploy a new cluster, such as a vSAN cluster, into an existing domain without introducing new management components." . Options A and D both introduce new workload domains or VCF instances, which require their own management stack (vCenter, NSX Manager, etc.) and are unnecessary in this scenario. Option B is incorrect because "vSAN storage-only nodes" are supported in vSAN but are not the method for adding a new cluster within VCF automation. The correct approach is deploying a second cluster inside the same workload domain—this reuses the existing management components while meeting the requirement for a new vSAN storage cluster.

7.Which two types of group can be created to collect and manage objects in Istio Service Mesh? (Choose two.)

- A. Security
- B. Cluster
- C. Service
- D. API
- E. Node

**Answer: B, C**

**Explanation:**

Comprehensive and Detailed

The Istio integration in VCF 9.0 defines two main logical groupings for organizing workloads within a service mesh: Cluster groups and Service groups. The documentation notes: "Cluster groups allow you to organize and manage objects across different Kubernetes clusters. Service groups let you aggregate and manage services that share common policies, routing rules, or observability requirements." . These groups enable administrators to apply consistent service mesh policies across multiple deployments and clusters. They also simplify administration by centralizing traffic management, routing,

P.S. Free 2025 VMware 2V0-11.25 dumps are available on Google Drive shared by TorrentExam: [https://drive.google.com/open?id=12gwR-X5\\_T73oYJ\\_0V3rVwSn4EOmply\\_c](https://drive.google.com/open?id=12gwR-X5_T73oYJ_0V3rVwSn4EOmply_c)

If you spare only a few days for exam preparation, our 2V0-11.25 learning materials can be your best choice for your time and money. With our 2V0-11.25 exam questions, you can not only pass exam in the least time with the least efforts but can also secure a brilliant percentage. And we will find that our 2V0-11.25 Study Guide is the most effective exam materials. We can claim that with our 2V0-11.25 training engine for 20 to 30 hours, you can pass the exam with ease.

Facts proved that if you do not have the certification, you will be washed out by the society. So it is very necessary for you to try your best to get the 2V0-11.25 certification in a short time. It is known to us that getting the 2V0-11.25 certification has become more and more popular for a lot of people in different area, including students, teachers, and housewife and so on. Everyone is desired to have the certification. Because The 2V0-11.25 Certification can bring a lot of benefits for people, including money, a better job and social status and so on.

## Well-Prepared VMware 2V0-11.25 Practice Online Are Leading Materials & Correct 2V0-11.25 Exam Topic

There are free demos giving you basic framework of 2V0-11.25 practice materials. All are orderly arranged in our practice

materials. After all high-quality demos rest with high quality 2V0-11.25 practice materials, you can feel relieved with help from then. We offer free demos as your experimental tryout before downloading our real 2V0-11.25 practice materials. For more textual content about practicing exam questions, you can download our 2V0-11.25 practice materials with reasonable prices and get your practice begin within 5 minutes.

## VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network</li> <li>storage design.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.</li> </ul>

## VMware Cloud Foundation 5.2 Administrator Sample Questions (Q134-Q139):

### NEW QUESTION # 134

An administrator has deployed a new VMware Cloud Builder appliance using the downloaded OVF file.

While attempting to use the VMware Cloud Builder interface, the administrator discovers that no connection can be established to the appliance.

Which three configuration errors may have occurred? (Choose three.)

- A. Incorrect DNS settings or inaccessible DNS servers.
- B. VLAN misconfiguration.
- C. Incorrect Dynamic IP configuration.
- D. Incorrect NTP settings or inaccessible NTP servers.
- E. Incorrect Static IP configuration.

- F. BGP routing misconfiguration.

**Answer: A,B,E**

Explanation:

A VLAN misconfiguration could prevent proper network connectivity, particularly if the appliance is not in the correct VLAN or if there is a misalignment in network segmentation.

Incorrect DNS settings or inaccessible DNS servers can prevent the VMware Cloud Builder appliance from being able to resolve hostnames, leading to connection issues.

Incorrect Static IP configuration would result in the appliance being unreachable because it won't have the correct IP address or network configuration to communicate with other components.

### NEW QUESTION # 135

An administrator is managing a VMware Cloud Foundation (VCF) environment. To support virtual machine backup using a third-party tool, the administrator has been tasked with assigning a service account (srvbackup01) access to the Production Virtual Machine (VM) folder and all child objects. The company security policy dictates that only the minimum required permissions must be assigned to service accounts to ensure they can function as designed.

Which three actions should the administrator take in the vSphere Client to complete the objective? (Choose three.)

- A. Clone the Administrator Role to create the backup\_service role.
- B. Select the necessary privileges for the backup\_service role.
- C. Assign the backup\_service role to the srvbackup01 user on the Production VM folder and propagate to all child objects.
- D. Assign the Administrator role to the srvbackup01 user on the Production VM folder and propagate to all child objects.
- E. Create a new Role called backup\_service.
- F. Assign the backup\_service role to the srvbackup01 user on the Production VM folder only.

**Answer: B,C,E**

Explanation:

You need a dedicated backup\_service role to tailor permissions.

Populate that role with only the required privileges for backup operations.

Assign the backup\_service role to srvbackup01 on the Production VM folder and enable propagation so all child VMs inherit those minimal permissions.

### NEW QUESTION # 136

An administrator has been tasked with expanding an existing VMware Cloud Foundation environment by adding a new workload domain. The environment currently has one management domain and one VI workload domain.

What options are available to the administrator for deploying NSX in the second VI workload domain?

- A. The new workload domain must have a dedicated NSX Fabric.
- B. The new workload domain can have its own dedicated NSX Fabric or it can join the existing NSX Fabric configured in the existing VI domain.
- C. The new workload domain can have a dedicated NSX Fabric or it can join the existing NSX Fabric configured in either the management domain or existing VI domain.
- D. The new workload domain can have its own dedicated NSX Fabric or it can join the existing NSX Fabric configured in the management domain.

**Answer: C**

Explanation:

When expanding a VMware Cloud Foundation environment with a new workload domain, you have the flexibility to either configure a dedicated NSX Fabric for the new domain or join an existing NSX Fabric from either the management domain or a previously established VI workload domain. This allows for consistent and scalable network virtualization across multiple domains in the environment.

### NEW QUESTION # 137

An administrator is tasked with deploying a new application that requires both virtual machines and containers.

Which two components of VMware Cloud Foundation would be utilized to provide a unified platform for managing these

workloads? (Choose two.)

- **A. NSX**
- B. Aria Suite Lifecycle
- **C. Aria Operations**
- D. IaaS Control Plane
- E. HCX

**Answer: A,C**

Explanation:

Aria Operations: Aria Operations (formerly vRealize Operations) provides a unified platform for managing both virtual machines (VMs) and containers, offering monitoring, analytics, and performance management for the entire environment.

NSX: NSX provides network virtualization and security, which can be used to manage network traffic for both VMs and containers, offering a consistent networking model for both workloads.

### NEW QUESTION # 138

An administrator is tasked with performing password rotation for VMware Cloud Foundation components managed by SDDC Manager.

Which action must be taken to complete this task?

- A. Schedule a maintenance window to rotate the passwords to minimize disruption.
- B. Manually update the passwords in vCenter Server and NSX Manager.
- **C. Access the SDDC Manager UI and navigate to the password management section.**
- D. Use the Async Patch CLI Tool to rotate passwords for all components.

**Answer: C**

Explanation:

Password rotation for VMware Cloud Foundation components is managed via the SDDC Manager UI. In the password management section of the SDDC Manager, administrators can rotate the passwords for various components like vCenter Server, NSX Manager, and other management components.

### NEW QUESTION # 139
