This is a desktop-based exam simulator software. The user can easily get used to its format and it is compatible with Windows. It has a bank of the actual VMware Cloud Foundation 5.2 Administrator (2V0-11.25) exam questions, going through them will prove to be vital for your VMware 2V0-11.25 exam preparation since a candidate must know his lacking points. The 2V0-11.25 Practice Exam simulator is reliable because its VMware 2V0-11.25 exam questions have been compiled by experts and you can be sure of their validity and accuracy. All features of the web-based practice exam are present in this software.

The price for 2V0-11.25 study materials is quite reasonable, no matter you are a student at school or an employee in the company, you can afford it. Just think that you just need to spend some money, you can get the certificate. What's more, 2V0-11.25 exam materials are compiled by skilled professionals, and they cover the most knowledge points and will help you pass the exam successfully. We have online and offline chat service stuff, they have the professional knowledge about 2V0-11.25 Exam Dumps, and you can have a chat with them if you have any questions.

Pass 2V0-11.25 Exam One Time

We know deeply that a reliable 2V0-11.25 exam material is our company's foothold in this competitive market. High accuracy and high quality are the most important things we always looking for. Compared with the other products in the market, our 2V0-11.25 latest questions grasp of the core knowledge and key point of the real exam, the targeted and efficient VMware Cloud Foundation 5.2 Administrator study training dumps guarantee our candidates to pass the test easily. Passing exam won't be a problem anymore as long as you are familiar with our 2V0-11.25 Exam Material (only about 20 to 30 hours practice). High accuracy and high quality are the reasons why you should choose us.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 2	- Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network - storage design.
Topic 3	Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 4	Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 5	IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q86-Q91):

NEW QUESTION # 86

What is the primary benefit of using VMware vCenter Content Libraries?

- A. They enable centralized management and distribution of VM templates, ISO images, and scripts.
- B. They allow for the automation of VM snapshots.
- C. They provide enhanced security for vCenter Server.
- D. They facilitate the creation of virtual networks.

Answer: A

Explanation:

VMware vCenter Content Libraries provide a centralized location for storing and managing virtual machine templates, ISO images, and scripts, making it easier to distribute these resources across multiple vCenter instances. This helps streamline the deployment process, ensuring consistency and reducing the overhead of managing these resources manually.

NEW QUESTION # 87

DRAG DROP

Match each troubleshooting task with its relevant procedure or tool.

Answer:

Explanation:

Tasks

Setting a host in maintenance mode	Resolve certificate issues
Resolve host connectivity issues	Setting a host in maintenance mode
Resolve certificate issues	Resolve host connectivity issues
Troubleshoot snapshot issues	Troubleshoot snapshot issues

Procedures/Tools

Use the Certificate Manager tool

Right-click the host and select "Enter Maintenance Mode"

Check physical connections and network configuration

Check for orphaned snapshots and consolidate if necessary

NEW QUESTION # 88

Which two steps should an administrator perform to configure the backup of the VMware Cloud Foundation (VCF) SDDC Manager and NSX components to allow them to be recovered in the event of a full site failure?

(Choose two.)

- A. Define a scheduled task in vCenter to create a snapshot of the NSX Edge cluster.
- B. Configure image-based backup for the NSX Manager cluster.
- C. Configure the backup settings in SDDC Manager.
- D. Prepare an external SFTP server to store file-based backups.
- E. Backup the NSX Manager configuration by exporting it to an archive file.

Answer: C,D

Explanation:

According to the official VMware Cloud Foundation 5.2 Administration Guide and VMware NSX Data Center documentation, the required and recommended steps to enable proper backup and recovery for the SDDC Manager and NSX Manager components are as follows:

Option B: Configure the backup settings in SDDC Manager. Exact Extract from official documentation:

"You must configure backup settings in SDDC Manager to ensure scheduled, automated backups of critical SDDC Manager configuration and inventory data. Backups are stored as files that can be used to restore SDDC Manager in case of a failure or disaster." (VMware Cloud Foundation Administration Guide - Backing Up SDDC Manager) Option D: Prepare an external SFTP server to store file-based backups. Exact Extract from official documentation:

"Configure an external SFTP server to store SDDC Manager backup files. SDDC Manager supports only file-based backups using SFTP as the storage protocol." (VMware Cloud Foundation Administration Guide - Configuring Backup Destinations) Why Not the Other Options?

Option A: Exporting an archive file from NSX Manager is a manual method and does not constitute a complete, restorable backup suitable for full site failure recovery.

Option C: Image-based backups for NSX Manager are not supported and can cause issues with the integrity and recoverability of NSX appliances, as per VMware best practices.

Option E: Snapshots of the NSX Edge cluster are not supported for backup and recovery; VMware specifically advises against using snapshots for backup purposes of NSX appliances.

Summary:

The administrator must configure the backup settings in SDDC Manager (B) and prepare an external SFTP server (D) to enable

secure, automated, and restorable backups of SDDC Manager and NSX components, as recommended and required by the official VMware Cloud Foundation 5.2 documentation.

NEW QUESTION # 89

A company plans to enhance its DevOps practices by implementing Kubernetes as part of a VMware Cloud Foundation (VCF) environment.

Which three steps must an administrator perform to achieve this integration? (Choose three.)

- A. Deploy HCX to migrate existing VMs to Kubernetes.
- B. Configure Aria Automation to automate the deployment of Kubernetes clusters.
- C. Enable IaaS control plane on existing vSphere clusters.
- D. Deploy NSX to manage the networking for Kubernetes clusters.
- E. Configure storage policies for Kubernetes cluster namespace consumption.

Answer: C,D,E

Explanation:

You must enable the IaaS control plane (Workload Management/vSphere Supervisor) on your vSphere clusters via SDDC Manager to provide the Kubernetes control plane.

Defining storage policies ensures that your Kubernetes Namespaces can consume persistent storage that meets application requirements.

NSX must be deployed (and an Edge cluster available) to provide networking, load balancing, and security services for the Kubernetes Pods and control plane.

NEW QUESTION # 90

Which three tools could identify and assist with troubleshooting a misconfigured vSAN network? (Choose three.)

- A. Direct Console User Interface (DCUI)
- B. vCheck
- C. esxcli
- D. Ruby vSphere Console (RVC) commands
- E. Supportability and Serviceability (SoS)
- F. vmkping

Answer: C,D,F

Explanation:

esxcli commands (for example, esxcli network vsan cluster get) can validate and configure vSAN network settings.

vmkping allows you to test VMkernel adapter connectivity on the vSAN network to confirm reachability and MTU correctness.

RVC provides specialized vSAN commands (such as vsan.network_info and health check commands) tailored for diagnosing vSAN network misconfigurations.
