

2V0-11.25 Valid Exam Cram, 2V0-11.25 Brain Dump Free

BONUS!!! Download part of TestKingIT 2V0-11.25 dumps for free: https://drive.google.com/open?id=1hNKZEbtBS1rfl-qxDO4yz_szoed8JI_O

The VMware 2V0-11.25 certification exam is one of the top-rated and valuable credentials in the VMware world. This VMware 2V0-11.25 exam questions is designed to validate the candidate's skills and knowledge. With VMware Cloud Foundation 5.2 Administrator exam dumps everyone can upgrade their expertise and knowledge level. By doing this the successful 2V0-11.25 Exam candidates can gain several personal and professional benefits in their career and achieve their professional career objectives in a short time period.

When you use our 2V0-11.25 learning guide, we hope that you can feel humanistic care while acquiring knowledge. Every staff at our 2V0-11.25 simulating exam stands with you. So if you have any confusion about our 2V0-11.25 exam questions, don't hesitate to ask for our service online or contact with us via email. we will solve your problem by the first time and give you the most professional suggestions. And we always consider your interest and condition to the first place. That's why so many of our customers praised our warm and wonderful services.

Top 2V0-11.25 Valid Exam Cram | Easy To Study and Pass Exam at first attempt & Latest updated 2V0-11.25: VMware Cloud Foundation 5.2 Administrator

Exam 2V0-11.25 is just a piece of cake if you have prepared for the exam with the help of TestKingIT's exceptional study material. If you are a novice, begin from 2V0-11.25 study guide and revise your learning with the help of testing engine. Exam 2V0-11.25 Brain Dumps is another superb offer of TestKingIT that is particularly helpful for those who want to the point and the most relevant content to pass exam. With all these products, your success is assured with 100% money back guarantee.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.

Topic 2	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 3	<ul style="list-style-type: none"> Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 4	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network storage design.
Topic 5	<ul style="list-style-type: none"> Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q134-Q139):

NEW QUESTION # 134

An administrator needs to configure an ESXi host and create a host profile to ensure consistent configuration across multiple hosts in a cluster.

Which three steps are necessary to achieve this? (Choose three.)

- A. Manually configure each host to match the reference host settings.
- B. Configure the desired settings on a reference ESXi host.
- C. Extract the host profile from the configured reference host.
- D. Remediate the non-compliant hosts to ensure they match the host profile.
- E. Apply the host profile to all hosts in the cluster.

Answer: B,C,D

Explanation:

First, configure the desired settings on a reference ESXi host. This host will be used as the template for creating a consistent configuration across the cluster.

After configuring the reference host, extract the host profile from it. This captures the configuration of the reference host as a host profile.

Remediation is necessary to ensure that other hosts in the cluster align with the reference host's configuration.

The host profile can be applied, and remediation will correct any non-compliant settings on other hosts.

NEW QUESTION # 135

DRAG DROP

Arrange the steps in the correct order to generate a performance report in Aria Operations.

Answer:

Explanation:

A screenshot of a computer AI-generated content may be incorrect.

NEW QUESTION # 136

A virtual private cloud administrator is regularly tasked to provision and manage new application workloads with dedicated subnets. Which two capabilities of VMware Cloud Foundation (VCF) can be used to alleviate the workload of the administrator with minimal interaction with the networking team? (Choose two.)

- A. Use of NSX overlay networks.
- B. Configure vSAN storage policies for each application.
- C. Deploy Aria Automation to enable self-service provisioning
- D. Use vSphere Resource Pools to allocate networking resources to different applications.

Answer: A,C

Explanation:

Deploying VMware Aria Automation enables self-service blueprints that allow the administrator or application owners to provision workloads, including dedicated networks, without direct requests to the networking team.

NSX overlay networks decouple the virtual network from the physical underlay, enabling the creation of tenant-specific subnets on demand without changes to the physical network.

NEW QUESTION # 137

DRAG DROP

Match each networking issue with the corresponding troubleshooting step.

Issues	Troubleshooting Steps
Host in Isolation Response	Examine NIC teaming and load balancing configuration
Host in Failover State	Verify the port group settings and VLAN configuration
Host in Unreachable State	Check physical network cables and switch port status

Answer:

Explanation:

Issues	Troubleshooting Steps
Host in Isolation Response	Examine NIC teaming and load balancing configuration
Host in Failover State	Verify the port group settings and VLAN configuration
Host in Unreachable State	Check physical network cables and switch port status

Explanation:

Issues		Troubleshooting Steps
Host in Isolation Response	Host in Isolation Response	Examine NIC teaming and load balancing configuration
Host in Failover State	Host in Failover State	
Host in Unreachable State	Host in Unreachable State	Check physical network cables and switch port status

NEW QUESTION # 138

Which vSphere component is essential for providing persistent storage to Kubernetes workloads deployed on IaaS Control Plane?

- A. Pod Service
- D vSAN
- B. Container Image Virtual Disks
- C. Control Plane Storage Policy

Answer: A

Explanation:

The vSphere Pod Service is essential for providing persistent storage to Kubernetes workloads deployed on IaaS Control Plane (formerly vSphere with Tanzu). It enables the integration of Kubernetes with vSphere, allowing the creation of persistent volumes and the management of storage resources for Kubernetes workloads, ensuring that they can utilize vSphere's storage capabilities like vSAN.

NEW QUESTION # 139
