flexibility. Can be deployed in a Simple or Highly Available Cluster deployment. Recommended deployment is a HA Cluster.... Simple deployment is for test/dev environments, it is not for production use cases."

By contrast, HA/clustered models increase resources to provide redundancy at scale. Since the requirement is the smallest resource footprint, the Simple model is the correct selection. (Stretched/Continuous Availability options are not listed VCF Operations models in this context.)

6.An administrator is tasked to deploy a new vSAN Storage Cluster to an existing VCF instance. The VCF instance is deployed as a single workload domain.

What must the administrator do to achieve this without deploying additional management components?

- A. Deploy an additional VCF instance and workload domain with a vSAN storage cluster.
- B. Deploy additional hosts as vSAN storage-only nodes within the existing cluster.
- C. Deploy a second cluster as a vSAN storage cluster in the existing workload domain.
- D. Deploy an additional workload domain with a vSAN storage cluster within the existing VCF instance.

Answer: C

Explanation:

Comprehensive and Detailed

The VCF 9.0 Architecture and Deployment Guide explains that within a single Workload Domain, administrators can scale resources by adding additional clusters, including compute or vSAN storage clusters. Specifically, "A Workload Domain can contain multiple clusters. You can deploy a new cluster, such as a vSAN cluster, into an existing domain without introducing new management components." . Options A and D both introduce new workload domains or VCF instances, which require their own management stack (vCenter, NSX Manager, etc.) and are unnecessary in this scenario. Option B is incorrect because "vSAN storage-only nodes" are supported in vSAN but are not the method for adding a new cluster within VCF automation. The correct approach is deploying a second cluster inside the same workload domain—this reuses the existing management components while meeting the requirement for a new vSAN storage cluster.

7.Which two types of group can be created to collect and manage objects in Istio Service Mesh? (Choose two.)

- A. Security
- B. Cluster
- C. Service
- D. API
- E. Node

Answer: B, C

Explanation:

Comprehensive and Detailed

The Istio integration in VCF 9.0 defines two main logical groupings for organizing workloads within a service mesh: Cluster groups and Service groups. The documentation notes: "Cluster groups allow you to organize and manage objects across different Kubernetes clusters. Service groups let you aggregate and manage services that share common policies, routing rules, or observability requirements." . These groups enable administrators to apply consistent service mesh policies across multiple deployments and clusters. They also simplify administration by centralizing traffic management, routing,

VMware 2V0-13.24 Exam Syllabus Topics:

Topic	Details
Topic 1	• Install, Configure, and Administrate the VMware by Broadcom Solution: This section has NO TESTABLE OBJECTIVES in this version of the exam.
Topic 2	• Troubleshoot and Optimize the VMware by Broadcom Solution: This section has NO TESTABLE OBJECTIVES in this version of the exam.
Topic 3	• VMware by Broadcom Solution: This section of the exam measures the skills of cloud architects and infrastructure engineers and focuses on understanding the architecture of VMware by Broadcom solution. Candidates should be able to differentiate between various VMware Cloud Foundation architecture options based on different scenarios.
Topic 4	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of VMware administrators. It involves gathering and analyzing business objectives and requirements to create a conceptual model. Additionally, it covers the creation of VMware Cloud Foundation logical and physical designs. This includes prerequisites and design decisions related to Network Infrastructure, VCF Management Domain, VCF Workload Domain, VCF Edge Cluster, VCF Cloud Automation, and VCF Cloud Operations. Designs should consider availability within and across availability zones, manageability (Lifecycle Management, Scalability, Capacity Management), performance, recoverability (BCDR strategies), and security for VCF Management Components and Workloads. Workload mobility, consumption, and monitoring strategies are also addressed in this section.
Topic 5	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of enterprise architects and solution architects and focuses on the fundamentals of IT architectures, technologies, and standards. It covers differentiating between business and technical requirements, understanding conceptual models, and logical and physical designs, and recognizing the distinctions between requirements, assumptions, constraints, and risks. Also included are availability, manageability, performance, recoverability, and security (AMPRS), developing risk mitigation strategies, documenting design decisions, and creating design validation strategies.

VMware Cloud Foundation 5.2 Architect Sample Questions (Q84-Q89):

NEW QUESTION # 84

Which of the following should be part of the logical design when creating a VMware Cloud Foundation Workload Domain?
Response:

- A. The expected workload types and their resource consumption
- B. The placement of physical network equipment in the data center
- C. The specific models of ESXi hosts used in the domain
- D. The configuration of storage devices for the domain

Answer: A

NEW QUESTION # 85

Which of the following is true about the Conceptual Model in IT architecture?
Response:

- A. It is a direct blueprint for the physical implementation of the system.
- B. It is highly detailed and includes specific hardware and software components.
- C. It only focuses on security components of the system.
- D. It defines a high-level representation of the system's structure and interactions.

Answer: D

NEW QUESTION # 86

What should be the first action to troubleshoot a network connectivity issue in VMware Cloud Foundation?

Response:

- **A. Check the physical NIC status**
- B. Check the ESXi host's network adapter settings
- C. Verify the DNS configuration
- D. Ensure the virtual switches are properly configured

Answer: A

NEW QUESTION # 87

Which of the following is part of developing a risk mitigation strategy in IT architecture?

Response:

- **A. Identifying risks and planning strategies to reduce their impact.**
- B. Focusing only on the cost and ignoring technical risks.
- C. Designing the system without assessing potential risks.
- D. Ignoring all potential risks to speed up the design process.

Answer: A

NEW QUESTION # 88

What is the main purpose of VMware NSX within the VMware Cloud Foundation environment?

Response:

- A. Virtual machine migration
- B. Storage management
- **C. Network virtualization and security**
- D. Monitoring and analytics

Answer: C
