

2V0-13.25 Prüfungsaufgaben, 2V0-13.25 Prüfungsvorbereitung

Wenn Sie die neuesten und genauesten Prüfungsfragen zur VMware 2V0-13.25 Zertifizierungsprüfung von ITZert wählen, ist der Erfolg nicht weit entfernt.

VMware 2V0-13.25 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.
Thema 2	Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.

Thema 3	Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.
Thema 4	VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.
Thema 5	IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.

2V0-13.25 Prüfungsvorbereitung, 2V0-13.25 Prüfungsfrage

Egal wie attraktiv die Vorstellung ist, ist nicht so überzeugend wie Ihre eigene Empfindung. Die Demo der VMware 2V0-13.25 Software können Sie auf unsere Webseite ITZert einfach herunterladen. Unser erfahrenes Team bietet Ihnen die zuverlässigsten Unterlagen der VMware 2V0-13.25. Wenn Sie noch Fragen über VMware 2V0-13.25 Prüfungsunterlagen haben, können Sie sich auf unsere Website online darüber konsultieren. Onlinedienst bieten wir ganztägig.

VMware Cloud Foundation 9.0 Architect 2V0-13.25 Prüfungsfragen mit Lösungen (Q71-Q76):

71. Frage

An architect is responsible for designing a VMware Cloud Foundation (VCF)-based solution for a customer.

The customer has the following requirement:

* There should be no single points of failure within the solution.

To comply with the customer requirement, the architect has decided to include physical NIC teaming for all ESX servers in the design.

When documenting this design decision, which consideration should the architect make?

- A. Embedded NICs should not be used for NIC teaming.
- B. Each NIC team must include NICs from different physical NIC Cards.**
- C. Each NIC team must include NICs from the same physical NIC Card.
- D. Only 10GbE NICs should be used for NIC teaming.

Antwort: B

Begründung:

The VMware Cloud Foundation 9.0.1 and 9.0.2 Design Guides emphasize that NIC teaming is a critical design element for fault tolerance and redundancy. To avoid a single point of failure at the physical layer, VMware prescribes that:

"Each traffic type is spread across separate network cards to avoid single point of failure." This ensures that in case one physical NIC card or PCI slot fails, the traffic can continue to flow through another NIC on a separate card, maintaining network connectivity and host resilience. This guidance is part of Physical NIC Level Redundancy (NLR) design considerations, ensuring that no single physical adapter failure disrupts the ESXi host or associated management, vMotion, or vSAN traffic.

The VCF distributed switch and NSX overlay networks benefit from independent uplinks across NIC cards, providing enhanced resiliency for management and workload domains. VMware recommends Active/Active or Active/Standby teaming using policies such as "Route based on physical NIC load" across multiple NIC cards.

References (VMware Cloud Foundation documents):

- * VMware Cloud Foundation 9.0.1 Design Guide - "Physical NIC Level Redundancy (NLR)"
- * VMware Cloud Foundation 9.0.2 Design Guide - "Basic NIC Teaming and Redundancy Considerations"
- * VMware Cloud Foundation 9.0.1 - "vSphere Distributed Switch Design Recommendations for NLR."

72. Frage

What are the most important troubleshooting actions when VMware vSAN experiences performance degradation?

- A. Verify vSAN storage policies
- B. Add more nodes to the vSAN cluster
- C. Check vSAN disk group health
- D. Optimize vSAN network configuration

Antwort: A,C,D

Begründung:

Checking disk group health, optimizing network configuration, and verifying storage policies are key steps.

73. Frage

Which of the following are essential tools for automating workflows in VMware Cloud Foundation?

- A. VMware vRealize Automation
- B. VMware vRealize Operations
- C. VMware vRealize Orchestrator
- D. VMware vSphere

Antwort: A,C

Begründung:

VMware vRealize Orchestrator and Automation are essential for automating workflows in VMware Cloud Foundation.

74. Frage

When planning a disaster recovery solution for VMware, which Broadcom solutions should be prioritized?

- A. Broadcom RAID Controller
- B. Broadcom 25GbE Ethernet Adapter
- C. vSAN
- D. vSphere Replication

Antwort: A,D

Begründung:

vSphere Replication and Broadcom RAID Controllers are key for disaster recovery solutions in VMware environments.

75. Frage

Which Broadcom solutions are critical for network performance and scalability in VMware Cloud Foundation?

- A. Broadcom Fibre Channel HBAs
- B. Broadcom NVMe SSDs
- C. Broadcom RAID controllers
- D. Broadcom Ethernet adapters

Antwort: D

Broadcom Ethernet adapters are critical for network performance in VMware Cloud Foundation.
