

# 2V0-16.25 Exam Bootcamp | Reliable 2V0-16.25 Dumps Book

2025 Latest TestBraindump 2V0-16.25 PDF Dumps and 2V0-16.25 Exam Engine Free Share: <https://drive.google.com/open?id=1AS4wyFcmCTBhLW3K-iqdrLpffV3uUiDZ>

As you may know that we have become a famous brand for we have engaged for over ten years in this career. The system designed of 2V0-16.25 learning guide by our professional engineers is absolutely safe. Your personal information will never be revealed. Of course, our 2V0-16.25 Actual Exam will certainly not covet this small profit and sell your information. So you can just buy our 2V0-16.25 exam questions without any worries and trouble.

Generally speaking, preparing for the 2V0-16.25 exam is a very hard and even some suffering process. Because time is limited, sometimes we have to spare time to do other things to review the exam content, which makes the preparation process full of pressure and anxiety. But from the point of view of customers, our 2V0-16.25 Study Materials will not let you suffer from this. As mentioned above, our 2V0-16.25 study materials have been carefully written, each topic is the essence of the content. Only should you spend about 20 - 30 hours to study 2V0-16.25 study materials carefully can you take the exam.

## Free PDF Quiz 2025 Professional 2V0-16.25: VMware vSphere Foundation 9.0 Administrator Exam Bootcamp

The VMware 2V0-16.25 certification topics or syllabus are updated with the passage of time. To pass the VMware VMware vSphere Foundation 9.0 Administrator exam you have to know these topics. The TestBraindump 2V0-16.25 certification exam trainers always work on these topics and add their appropriate VMware 2V0-16.25 Exam Questions And Answers in the 2V0-16.25 exam dumps. These latest VMware VMware vSphere Foundation 9.0 Administrator exam topics are added in all VMware VMware vSphere Foundation 9.0 Administrator exam questions formats.

## VMware vSphere Foundation 9.0 Administrator Sample Questions (Q20-Q25):

### NEW QUESTION # 20

Which action allows a Content Library in VMware vSphere Foundation (VVF) to be accessed by other VMware vCenter Server instances?

- A. Store the library on a vSAN datastore.
- B. Store the library on a shared NFS datastore.
- C. Enable automatic synchronization.
- **D. Publish the Content Library.**

**Answer: D**

Explanation:

To allow a Content Library in vSphere Foundation to be accessed by other vCenter Server instances, it must be published.

\* Once published, other vCenters can subscribe to the library.

\* Synchronization ensures subscribed vCenters receive updated templates and ISOs.

Other options:

\* A. Automatic synchronization# Works only for subscribers, not for publishing.

\* B. Store on vSAN datastore# Storage choice does not enable multi-vCenter access.

\* C. Store on NFS datastore# Similar, datastore type does not matter.

References:

VMware vSphere 9.0 -Content Library Publishing and Subscription

VMware Docs: Publishing and Subscribing Content Libraries

### NEW QUESTION # 21

The security team requests the ability to log into VMware vCenter and review datacenter, cluster and network configurations. The following details are provided:

\* The security team is not authorized to make any changes to the environment.

\* Each user must login with unique credentials.

What steps should the administrator perform to grant access to the security team?

- A. Create a security user, assign the user the Read-Only role, share the credentials with the security team.
- B. Create a group for the security team, add the users to the group, and assign the group the Network Administrator role.
- C. Share the password for 'administrator@vsphere.local' with the security team.
- **D. Create a group for the security team, add the users to the group, and assign the group the Read-Only role.**

**Answer: D**

Explanation:

The security team requires visibility into vCenter configurations but must not make changes.

\* Best practice is to create an Active Directory or vCenter group, add the security users, and assign them the Read-Only role at the datacenter/cluster/network level.

\* This ensures each user logs in with unique credentials, maintaining accountability.

Why others are incorrect:

\* A. Share administrator@vsphere.local password# Violates security best practices.

\* B. Create a single user and share credentials# Still insecure, lacks unique audit trails.

\* C. Assign Network Administrator role# Grants configuration permissions, not allowed.

VMware vSphere 9.0 Documentation - Roles and Permissions Best Practices

VMware Docs: vCenter Server Role-Based Access Control

### NEW QUESTION # 22

An administrator has noticed occasional performance degradation during peak usage times and needs to address this issue proactively by creating a mechanism that doesn't give data or outputs too often to overload the team.

Which of the following steps is required to create the mechanism in VMware Cloud Foundation (VCF) Operations?

- A. Create a custom dashboard to visualize all alerts.
- B. Implement an alert with the default alert settings.
- **C. Implement an alert specifying the metric, threshold, and duration.**
- D. Implement an alert that notifies the IT team during off-peak hours.

**Answer: C**

Explanation:

The administrator wants to proactively manage performance degradation during peak times without overwhelming the IT team.

- \* The correct method is to create a custom alert with specific metric, threshold, and duration (A).
- \* This ensures alerts are triggered only when sustained performance issues occur, reducing noise.
- \* B. Default alert settings# Too generic, may cause alert storms.
- \* C. Custom dashboard# Useful for visualization but not proactive alerting.
- \* D. Notify during off-peak hours# Defers the issue, not proactive.

VMware Docs: [Configuring Alerts in vRealize Operations]

### NEW QUESTION # 23

An administrator enables the VMware Cloud Foundation (VCF) Operations orchestrator Plug-in for VMware vSphere Web Client service on a VCF Operations orchestrator appliance.

How many vSphere instances can be integrated in the vSphere Client through the VCF Operations orchestrator plug-in?

- A. 0
- **B. 1**
- C. 2
- D. 3

**Answer: B**

Explanation:

The VCF Operations Orchestrator Plug-in for VMware vSphere Web Client allows orchestration workflows directly in the vSphere Client.

- \* However, only one vSphere instance can be integrated at a time with the vSphere Client via this plug-in.
- \* This limitation ensures a consistent, single orchestration endpoint per vSphere Client environment.

Other options (8, 10, 15) apply to scaling of vCenter or data sources but not to the Orchestrator Plug-in integration.

References:

VMware Cloud Foundation 9.0.1 -Orchestrator Plug-in Integration Limits

VMware Docs: vRealize Orchestrator Plug-in for vSphere Web Client

### NEW QUESTION # 24

An administrator is tasked with adding a 96-core VMware ESX host to a VMware vSphere Foundation (VVF)

9.0 vCenter cluster. The vCenter has been previously licensed for 1024 cores and the existing hosts equal 960 cores. The administrator adds the host to the vCenter cluster and places the cluster back into production.

What issue will occur if the administrator performs no additional actions to this vCenter?

- A. No issue will occur. The new host was added to the vCenter cluster successfully and will operate for the valid period of the applied license.
- B. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, the host will be limited to 64 cores until 32 cores or greater is added to the license.
- C. The new ESX host has been limited to 64 cores until more capacity is added to the license to license the host. Once 32 cores or greater is added to the license, the full 96 cores of the new host will be useable.
- **D. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, it is disconnected from the vCenter instance.**

**Answer: D**

Explanation:

The vSphere Foundation 9.0 licensing model uses per-core licensing.

- \* Current license covers 1024 cores.
- \* Existing hosts = 960 cores, leaving 64 cores licensed.
- \* Adding a 96-core host# 32 cores exceed the license.

Result:

\* The new host runs inevaluation mode.

\* If not licensed after the evaluation period, the host is disconnected from vCenter.

Other options:

\* A. Limited to 64 cores# Not how VMware licensing enforcement works.

\* B. Limited to 64 cores until license upgrade# Incorrect; VMware does not partially disable cores.

\* D. No issue# Incorrect; licensing compliance will cause issues.
