1 / 8

Our company employs experts in many fields to write 2V0-16.25 study guide, so you can rest assured of the quality of our 2V0-16.25 learning materials. What's more, preparing for the exam under the guidance of our 2V0-16.25 Exam Questions, you will give you more opportunities to be promoted and raise your salary in the near future. So when you are ready to take the exam, you can rely on our 2V0-16.25 learning materials!

We have confidence and ability to make you get large returns but just need input small investment. our 2V0-16.25 study materials provide a platform which help you gain knowledge in order to let you outstanding in the labor market and get satisfying job that you like. The content of our 2V0-16.25 question torrent is easy to master and simplify the important information. It conveys more important information with less answers and questions, thus the learning is easy and efficient.

Quiz VMware - Accurate 2V0-16.25 Exams Torrent

Another challenge is staying on top of the ever-changing exam content. VMware 2V0-16.25 is constantly evolving, and it can be difficult to know what to expect on test day. Our VMware 2V0-16.25 practice tests and PDF are updated regularly to reflect the latest VMware 2V0-16.25 Exam Format and content, so you can be confident that you are studying the most up-to-date 2V0-16.25 exam information.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q48-

Q53):

NEW QUESTION # 48

The security team has requested that high-sensitivity workloads be protected using Confidential Computing in your VMware vSphere Foundation (VVF) 9.0 environment. These workloads handle regulated data that must be isolated from the hypervisor and other tenants, even when running on the same ESX host.

The vSphere administrator is responsible for ensuring that only trusted hosts are used and that virtual machines are configured with hardware-enforced memory isolation.

Which two configurations must you implement to support Confidential Computing for these workloads?

(Choose two.)

- A. Configure Encrypted vMotion with "Required" mode for the VM.
- B. Enable AMD SEV-SNP or Intel TDX support in the host BIOS and confirm compatibility in vSphere.
- C. Enable vSphere Trust Authority and set the Confidential Computing flag.
- D. Create virtual machines with hardware version 22 and set the Confidential Computing flag.
- E. Use TPM 2.0 on the guest OS to generate attestation reports for VM launch.

Answer: B,C

Explanation:

For Confidential Computing in vSphere 9.0:

* Hardware Memory Isolation: Requires AMD SEV-SNP (Secure Encrypted Virtualization - Secure Nested Paging) or Intel TDX (Trust Domain Extensions) enabled in the host BIOS and supported by ESXi. (C)

* Trusted Hosts: Must use vSphere Trust Authority (vTA) to ensure that only verified, secure hosts run Confidential VMs. The VM must have the Confidential Computing flagset. (E) Other options:

* A. VM Hardware version 22# Required for new features, but Confidential Computing specifically requires hardware + vTA.

* B. TPM 2.0 guest OS attestation# Not used for Confidential Computing, that's host-based attestation.

* D. Encrypted vMotion Required# Recommended for secure vMotion, but not sufficient for Confidential Computing.

VMware vSphere 9.0 - Confidential Computing Requirements

VMware Docs: vSphere with AMD SEV-SNP and Intel TDX

NEW QUESTION # 49

An administrator is preparing to deploy VMware vSphere Foundation using the VMware Cloud Foundation (VCF) Installer wizard. During host onboarding, it is discovered that the VMware ESX hosts each have different root passwords.

Which deployment method must be used to continue the installation?

- A. Proceed with the wizard and override host credentials during staging.
- B. Set the password to expire on all ESX hosts.
- C. Use the deployment wizard and enter credentials per host manually.
- D. Use a JSON specification file to define per-host credentials.

Answer: D

Explanation:

When deploying VMware vSphere Foundation using the VCF Installer wizard, host onboarding requires consistent access credentials.

* If ESX hosts have different root passwords, the wizard cannot proceed using a single credential.

* In this case, administrators must use a JSON specification file to define per-host credentials, ensuring each host can be onboarded successfully.

* The JSON specification allows defining host-specific parameters (IP, hostname, root password, networking, etc.).

Other options are incorrect:

* A. Proceed with wizard and override host credentials during staging# Not supported.

* B. Use deployment wizard and enter credentials per host manually# Wizard requires uniform credentials.

* C. Set password to expire on all ESX hosts# Irrelevant to deployment and would cause failures.

References:

VMware Cloud Foundation Deployment Guide - Host onboarding using JSON specification (covered in installer documentation).

VMware Docs: Using JSON Specification for VCF Deployment

NEW QUESTION # 50

An administrator must configure identity access for VMware vSphere Foundation (VVF) to allow admin accounts from the enterprise Active Directory domain corp.local to log in using domain credentials. Security requires authentication to use the default Active Directory protocol, without federation.

Which configuration step is required to enable Active Directory users to authenticate to vCenter?

- A. Configure Identity Federation using SAML with corp.local.
- **B. Add Active Directory over LDAP as an identity source.**
- C. Configure a trusted identity provider using OpenID Connect (OIDC).
- D. Add the domain controller certificate to the Trusted Root store in vCenter.

Answer: B

Explanation:

To allow Active Directory domain users (corp.local) to authenticate in vCenter with domain credentials:

* The correct method is configuring Active Directory over LDAP as an identity source. (D)

* This uses the default AD protocol (LDAP/Kerberos) without requiring SAML or OIDC federation.

Other options:

* A. Adding domain controller certificate# Needed for LDAPS but not the main step.

* B. Identity Federation with SAML# Requires federation, not allowed per requirements.

* C. OpenID Connect (OIDC)# Used for external IdPs, not traditional AD auth.

VMware vSphere 9.0 - Configuring Active Directory Identity Sources

VMware Docs: Add AD over LDAP as Identity Source

NEW QUESTION # 51

An administrator is tasked to configure VMware Cloud Foundation (VCF) Operations alerts to notify only relevant stakeholders when alerts trigger.

Which configuration step will satisfy the requirement?

- A. Configure notification to use generic contact information.
- B. Configure notification for only critical alerts.
- **C. Configure notification to specific alert recipients.**
- D. Configure notification to write a file to an output folder.

Answer: C

Explanation:

In VCF Operations, alerts can be configured with notification settings. To ensure only relevant stakeholders receive alerts:

* You assign specific recipients to notifications.

* This avoids alert fatigue and ensures teams only see alerts they are responsible for.

Other options:

* A. Write to file# Not for stakeholder notifications.

* B. Only critical alerts# Reduces volume, but still not targeted to relevant recipients.

* D. Generic contact info# Sends to broad groups, not selective.

VMware Docs: Configuring Notifications in vRealize Operations

NEW QUESTION # 52

An administrator has successfully deployed the VMware Cloud Foundation (VCF) Installer appliance to begin a new VMware vSphere Foundation (VVF) deployment. The VMware ESX hosts are powered on and meet all hardware and connectivity prerequisites.

What is the next step to begin deploying vSphere Foundation?

- A. Manually deploy the vCenter Server Appliance.
- **B. Launch the VCF Installer deployment wizard.**
- C. Install SDDC Manager using the VCF Installer.
- D. Enable SSH on all ESX hosts.

Answer: B

Explanation:

After successfully deploying the VCF Installer appliance, and ensuring ESXi hosts are powered on and meet prerequisites, the next steps are to:

* Launch the VCF Installer deployment wizard, which guides administrators through host onboarding, vCenter deployment, and cluster setup for vSphere Foundation.

Other options:

* A. Enable SSH on all ESX hosts# Not required unless troubleshooting.

* C. Install SDDC Manager using VCF Installer# Only applies to full Cloud Foundation, not vSphere Foundation deployment.

* D. Manually deploy vCenter Server Appliance# The Installer wizard automates this.
