SAP C-
BRIM-2020 SAP Certified Application Associate - SAP Billing and Revenue Innovation Management 3

NEW QUESTION # 54

Which business partner role is required to trigger the business partner replication from SAP S/4HANA to SAP Convergent Charging?

- A. Contract partner
- B. Sold-to-Party
- C. Service Recipient
- D. FI Customer

Answer: A

NEW QUESTION # 55

Our C-BRIM-2020 guide torrent specially proposed different versions to allow you to learn not only on paper, but also to use mobile phones to learn. This greatly improves the students' availability of fragmented time. You can choose the version of C-BRIM-2020 learning materials according to your interests and habits. And if you buy the value pack, you have all of the three versions, the price is quite preferential and you can enjoy all of the study experiences. This means you can study C-BRIM-2020 Exam Engine anytime and anywhere for the convenience to help you pass the C-BRIM-2020 exam.

It is seen as a challenging task to pass the 2V0-16.25 exam. Tests like these demand profound knowledge. The VMware 2V0-16.25 certification is absolute proof of your talent and ticket to high-paying jobs in a renowned firm. VMware vSphere Foundation 9.0 Administrator 2V0-16.25 test every year to shortlist applicants who are eligible for the 2V0-16.25 exam certificate.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.

Topic 2	Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
Topic 3	IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.
Topic 4	VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.
Topic 5	Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.

In the era of informational globalization, the world has witnessed climax of science and technology development, and has enjoyed the prosperity of various scientific blooms. In 21st century, every country had entered the period of talent competition, therefore, we must begin to extend our 2V0-16.25 personal skills, only by this can we become the pioneer among our competitors. At the same time, our competitors are trying to capture every opportunity and get a satisfying job. In this case, we need a professional 2V0-16.25 Certification, which will help us stand out of the crowd and knock out the door of great company.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q44-Q49):

NEW QUESTION # 44

An administrator is tasked with adding a 96-core VMware ESX host to a VMware vSphere Foundation (VVF) 9.0 vCenter cluster. The vCenter has been previously licensed for 1024 cores and the existing hosts equal 960 cores. The administrator adds the host to the vCenter cluster and places the cluster back into production. What issue will occur if the administrator performs no additional actions to this vCenter?

- A. The new ESX host has been limited to 64 cores until more capacity is added to the license to license the host. Once 32 cores or greater is added to the license, the full 96 cores of the new host will be useable.
- B. No issue will occur. The new host was added to the vCenter cluster successfully and will operate for the valid period of the applied license.
- C. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, it is disconnected from the vCenter instance.

- D. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, the host will be limited to 64 cores until 32 cores or greater is added to the license.

Answer: C

Explanation:

The vSphere Foundation 9.0 licensing model uses per-core licensing.

- * Current license covers 1024 cores.
- * Existing hosts = 960 cores, leaving 64 cores licensed.
- * Adding a 96-core host # 32 cores exceed the license.

Result:

- * The new host runs in evaluation mode.
- * If not licensed after the evaluation period, the host is disconnected from vCenter.

Other options:

- * A. Limited to 64 cores # Not how VMware licensing enforcement works.
- * B. Limited to 64 cores until license upgrade # Incorrect; VMware does not partially disable cores.
- * D. No issue # Incorrect; licensing compliance will cause issues.

VMware Licensing Guide -Per-Core Licensing Enforcement

VMware Docs: vSphere License Enforcement

NEW QUESTION # 45

An administrator has been tasked to share resources in the cluster between the Quality Assurance (QA) Department and Marketing Department. The following information has been provided:

- * In the case of contention, the QA Department must not lose any performance.
 - * When the QA Department is not using all of its allocated resources, the Marketing Department requires the ability to consume them.
 - * The administrator has set up resource pools for the QA Department (RP-QA) and Marketing Department (RP-MKT).
- How should the resource shares be configured for each pool?

- **A. Set RP-QA to Fixed and RP-MKT to Scalable.**
- B. Set RP-QA to Scalable and RP-MKT to Fixed.
- C. Set both Resource Pools to Fixed.
- D. It is not possible to satisfy the requirements of both departments.

Answer: A

Explanation:

The requirements:

- * QA must not lose performance during contention # QA must have guaranteed resources, so Fixed is correct.
- * Marketing can use leftover resources when QA is idle # Marketing must be Scalable, so it can borrow resources from QA's allocation when available.

Other options:

- * A. Both Fixed # Marketing would not be able to use QA's unused resources.
- * C. QA Scalable, MKT Fixed # QA would lose guaranteed resources, violating requirements.
- * D. Not possible # Incorrect; VMware supports this configuration.

VMware vSphere 9.0 -Resource Pool Allocation (Fixed vs. Scalable)

VMware Docs: Using Resource Pools

NEW QUESTION # 46

An administrator is tasked with upgrading to VMware vSphere Foundation (VVF) on an existing VMware vCenter 8.0u3. The environment has integrated NSX 4.2, 12 clusters, all using Fibre Channel connected VMFS block shared storage, and is not part of an existing VMware Cloud Foundation.

Which install method is used to perform the upgrade?

- A. Deploy
- B. Not possible, must perform a fresh deployment

- C. Upgrade
- **D. Converge**

Answer: D

Explanation:

When upgrading to vSphere Foundation (VVF) on an existing vCenter Server 8.0u3 environment with NSX, the correct method is Converge:

- * Convergetakes an existing vSphere + NSX environment and brings it into the vSphere Foundation framework, without redeploying from scratch.
- * Deployis used for new greenfield installations.
- * Upgradeapplies to upgrading from an earlier version of vSphere Foundation, not from standalone vSphere.
- * Not possible (A)is incorrect - VMware supports Converge in this scenario.

VMware Cloud Foundation 9.0 -Converge Deployment Path

VMware Docs: Converge Workflow for vSphere Foundation

NEW QUESTION # 47

An administrator is tasked with developing an automated, repeatable process to:

- * Connect to the corporate Active Directory and create a Windows computer object in a defined Organizational Unit.
- * Connect to the target vCenter and create a Windows VM from a template.
- * Power on the VM and join it to the corporate domain.

Which VMware vSphere Foundation (VVF) component is best suited for this task?

- A. VCF CLI
- **B. VCF Operations Orchestrator**
- C. vSphere Supervisor
- D. VCF Operations

Answer: B

Explanation:

The scenario describes an automated, repeatable workflow:

- * Create an AD computer object.
- * Deploy a VM from a template.
- * Power on the VM and join domain.

The correct tool is VCF Operations Orchestrator (formerly vRealize Orchestrator), which:

- * Provides automation and integration with Active Directory and vCenter APIs.
- * Can execute workflows for VM provisioning and domain joining.

Other options:

- * A. vSphere Supervisor# Kubernetes workload management, not AD/VM automation.
- * B. VCF Operations# Monitoring and analytics, not workflow automation.
- * C. VCF CLI# Useful for manual scripting but not suited for automated workflows.

NEW QUESTION # 48

During a recent audit, it was determined that a group of users may have been compromised. These users should not have access to any VMware vCenter resources while an investigation is underway. All the affected users have been placed into a SUSPECT_USERS group.

Which step is required to ensure that the suspect users will never have access to resources in vCenter?

- A. Assign the SUSPECT_USERS group the Read-only role to the vCenter Object and check propagate.
- **B. Assign the SUSPECT_USERS group the No access role to the vCenter Object and check propagate.**
- C. Disconnect the vCenter from Active Directory.
- D. Assign the SUSPECT_USERS group the Administrator role to the vCenter Object and uncheck propagate.

Answer: B

To ensure compromised users cannot access vCenter resources:

- * Assign theNo Accessrole at the vCenter level.
- * Enable propagationso this restriction applies to all child objects.
- * This guaranteeszero permissionsfor SUSPECT_USERS.

Other options:

- * B. Administrator with unchecked propagate# Still gives dangerous access at root level.
- * C. Disconnect Active Directory# Disrupts all AD users, not just suspect ones.
- * D. Read-only role# Still grants access, not acceptable during investigation.
