

2V0-16.25 Valid Study Materials - New 2V0-16.25 Test Objectives

You may find it is hard to catch up at the start of 2V0-16.25 exam certification. Now you are better to seek for some useful study material than complain about the difficulty of the 2V0-16.25 exam. 2V0-16.25 training practice may be your best choice. There are comprehensive content in the 2V0-16.25 simulate test which can ensure you 100% pass. 2V0-16.25 valid and helpful training will give you more confidence and courage. Just starting study with 2V0-16.25 dumps torrent, you will be on the way to success.

We are glad to receive all your questions on our 2V0-16.25 learning guide. If you have any questions about our 2V0-16.25 study questions, you have the right to answer us in anytime. Our online workers will solve your problem immediately after receiving your questions. Because we hope that you can enjoy the best after-sales service. We believe that our 2V0-16.25 Preparation exam will meet your all needs. Please give us a chance to service you; you will be satisfied with our 2V0-16.25 study materials.

New 2V0-16.25 Test Objectives - Exam 2V0-16.25 Course

Dear, if you are preparing for the 2V0-16.25 exam test, you cannot miss Pass4suresVCE 2V0-16.25 dumps torrent. 2V0-16.25 pdf torrent is the best valid and reliable study material you are looking for. The content of 2V0-16.25 training vce are edited and compiled by the professional experts who have all been worked in the IT industry for decades. The authority and reliability are without any doubt. With the help of VMware 2V0-16.25 Free Download Pdf, you will get high scores in your actual test.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.

Topic 2	Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
Topic 3	IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.
Topic 4	Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
Topic 5	VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q53-Q58):

NEW QUESTION # 53

An administrator has enabled a Supervisor on a vSphere cluster. The DevOps team has requested access to vSphere resources such as virtual machines, storage, and networking using Kubernetes tooling. To meet this request, the administrator must provide secure, policy-based access that sets clear boundaries for compute and storage consumption.

Which function is provided by Supervisor services to support this use case?

- **A. Allow access to vSphere resources through Kubernetes in a configured Supervisor Namespace.**
- B. Grant DevOps users administrator access to the vCenter Server system namespace.
- C. Enable virtual machine backup using native Kubernetes ConfigMaps.
- D. Enable vSphere Replication between Supervisor Namespaces.

Answer: A

Explanation:

When Supervisor is enabled:

* It provides Supervisor Namespaces, which grant DevOps teams secure, policy-based access to vSphere resources (VMs, storage, networking) through Kubernetes tooling.

* This enforces boundaries and quotas for compute/storage consumption.

Other options:

* B. VM backup via ConfigMaps# Not a feature of Supervisor.

* C. vSphere Replication between namespaces# Not a Supervisor function.

* D. Granting administrator access to vCenter system namespace# Violates least-privilege security.

NEW QUESTION # 54

An organization requires a centralized platform to monitor the performance, health, and capacity of their entire VMware vSphere

Foundation (VVF) environment.

Which two components would provide this capability? (Choose two.)

- A. VCF Operations for Logs
- **B. VCF Operations for Networks**
- C. vSphere Supervisor
- **D. VCF Operations**

Answer: B,D

Explanation:

The requirement is for a centralized platform to monitor performance, health, and capacity across the entire VMware vSphere Foundation (VVF) environment.

* VCF Operations

* Provides end-to-end performance monitoring, capacity management, and health analytics across vCenter, ESXi, vSAN, and NSX.

* Includes FinOps and Capacity Planning, performance diagnostics, and AI-driven troubleshooting for faster remediation.

* This is the primary component for monitoring the entire VCF environment.

* VCF Operations for Networks

* Extends observability to network operations by monitoring NSX health, VPCs, and network flows.

* Provides traffic summaries, alerts, and network capacity metrics.

* Integrated with VCF Operations to ensure a complete platform-wide view of health and performance.

* Why not the others?

* VCF Operations for Logs # Focused on log management, troubleshooting, and diagnostics (not holistic performance/capacity monitoring).

* vSphere Supervisor # Provides Kubernetes namespace and workload management, not centralized performance/capacity monitoring.

NEW QUESTION # 55

An administrator is tasked to create a new VMware vSAN cluster. The following information was provided to the administrator:

* Should host high performance application.

* Workload is latency dependent.

* Workload, compute and storage must be in the vSAN cluster.

Which configuration should the administrator choose for this vSAN cluster?

- A. vSAN Original Storage Architecture (OSA) Stretched Cluster
- B. vSAN Storage Cluster
- C. vSAN Original Storage Architecture (OSA)
- **D. vSAN Express Storage Architecture (ESA)**

Answer: D

Explanation:

The workload requirements specify:

* High-performance application

* Latency-dependent workloads

* Compute and storage must reside in the vSAN cluster

The correct option is vSAN Express Storage Architecture (ESA) because:

* ESA is designed for high-performance, low-latency applications.

* It leverages NVMe-based storage devices and 25GbE networking, delivering better IOPS and reduced latency compared to OSA.

* OSA (Original Storage Architecture) is older and less efficient.

* OSA Stretched Cluster (A) is for resilience across sites, not specifically performance.

* vSAN Storage Cluster (B) is a generic term and not specific.

References:

VMware vSAN 9.0 - ESA vs OSA Architecture

VMware Docs: vSAN Express Storage Architecture

NEW QUESTION # 56

An administrator is following the concept of least privilege and must configure permissions in a vSphere environment granting members of the group corp\VM-Managers the following abilities:

- * Power on/off virtual machines
- * Open consoles
- * Create snapshots

Which out-of-the-box role satisfies these access control requirements?

- A. Virtual Machine User
- B. Administrator
- C. Virtual Machine Console User
- **D. Virtual Machine Power User**

Answer: D

Explanation:

The requirement is to follow least privilege while granting specific VM operations:

- * Power on/off virtual machines
- * Open consoles
- * Create snapshots

The Virtual Machine Power User role is the correct out-of-the-box role, as it includes all these privileges without granting unnecessary administrative access.

Other roles:

- * Administrator (A): Grants full environment control # too broad.
- * Virtual Machine Console User (B): Limited to console access, cannot power on/off or snapshot.
- * Virtual Machine User (C): Can interact with VMs but lacks snapshot privileges.

NEW QUESTION # 57

An administrator is tasked to configure shared storage for a VMware vSphere Foundation (VVF) cluster at a remote location.

The following is available at the remote location:

- * Two ESX servers.
- * Two 1GbE network cards per ESX.
- * One sixteen port 1GbE Switch.
- * One NVMe per ESX for the Operating System.
- * One storage system supporting network and fiber channel capabilities.

What storage protocol must the administrator use at the remote location?

- A. Local Storage
- **B. NFS**
- C. Fiber Channel
- D. vSAN

Answer: B

Explanation:

The scenario:

- * Remote site with 2 ESXi servers, 1GbE networking only.
- * Storage system supports both network (NAS/iSCSI/NFS) and Fiber Channel.
- * Fiber Channel is not feasible (no FC switches/HBAs).
- * vSAN requires more than 2 nodes (minimum 3 for standard vSAN, 2+Witness for 2-node), not mentioned here.

The most suitable solution:

- * Use NFS storage over 1GbE. (D)
- * Provides shared storage accessible to both ESXi hosts.

Other options:

- * A. vSAN # Needs 3+ nodes or a witness, not supported in this config.
- * B. Local storage # Not shared, fails HA/DRS requirements.

* C. Fiber Channel# Requires HBAs and FC switch, not available.

NEW QUESTION # 58

.....

Due to extremely high competition, passing the VMware vSphere Foundation 9.0 Administrator (2V0-16.25) exam is not easy; however, possible. You can use Pass4suresVCE products to pass the 2V0-16.25 exam on the first attempt. The VMware vSphere Foundation 9.0 Administrator (2V0-16.25) practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the VMware vSphere Foundation 9.0 Administrator (2V0-16.25) exam on the first attempt. Pass4suresVCE 2V0-16.25 Questions have helped thousands of candidates to achieve their professional dreams.
