VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.

Topic 2	• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 3	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 4	• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q39-Q44):

NEW QUESTION # 39

An organization is using VMware Aria Automation for automating virtual machine deployments.

Recently, some deployment requests have been failing. An administrator needs to use Aria Automation to troubleshoot these failures. Which two steps should be taken? (Choose two.)

- A. Review the provisioning diagrams for patterns of failure.
- B. Disable integrations and re-run deployment.
- C. Re-run the failed deployments without any changes.
- D. Disable all automation policies temporarily.
- E. Check the request logs for error messages.

Answer: A,E

Explanation:

Checking the request logs surfaces the specific error messages and failures during provisioning.

Reviewing the provisioning diagrams helps identify patterns or misconfigurations in the automation workflow.

NEW QUESTION # 40

In a multi-tier application hosted on vSphere, the database VM consistently faces storage latency issues.

What is the most appropriate initial action?

- A. Examine disk performance metrics in vCenter or vRealize Operations
- B. Configure an EVC cluster for the database VM
- C. Increase the VM's CPU reservation
- D. Migrate the database VM to a Standard vSwitch

Answer: A

Explanation:

Troubleshooting storage latency usually begins with reviewing performance charts and metrics. CPU reservations (A), network switching (C), or EVC (D) do not directly address storage latency without first identifying the root cause through monitoring.

NEW QUESTION # 41

Which of the following features in vRealize Operations aids in optimizing a VMware environment?

- A. Automated resource reclamation recommendations
- B. Predictive capacity analytics
- C. Built-in compliance checks for best practices
- D. Real-time VM-to-VM replication for backup

Answer: A,B,C

Explanation:

vRealize Operations provides optimization capabilities like resource reclamation, compliance checks, and capacity analytics. Real-time replication (C) is not a vRealize Operations feature; vSphere Replication or other backup/DR solutions handle that functionality.

NEW QUESTION # 42

After a migration to VCF 9.0, an administrator must import only logging data newer than 90 days from Aria Operations for Logs 8.x into VCF Operations for Logs. If VCF Operations for Logs has enough space available, what is the correct way to achieve this?

- A. Initiate the transfer from the Control Panel in VCF Operations.
- B. Initiate the transfer from Aria Operations for Logs.
- C. Configure log forwarding in Aria Operations for Logs.
- D. Import logs from an NFS archive used for Aria Operations for Logs.

Answer: A

Explanation:

VCF 9.0 introduces Log Data Transfer initiated from VCF Operations. The docs say: "You can transfer log data for up to 90 days from Aria Operations for Logs 8.x... The migrated logs are stored in VCF Operations for logs." and "To transfer logs... navigate to the Logs Data Transfer card in Administration > Control Panel... click the INITIATE TRANSFER button... You can select the duration of logs to transfer..." (emphasis added).

They further clarify that simple forwarding does not transfer already ingested logs: "Forward logs... does not transfer already ingested logs. Transfer historical logs up to 90 days... using the Log Data Transfer feature in VCF Operations." Hence, the correct action is to initiate the transfer in VCF Operations (Administration > Control Panel > Logs Data Transfer).

NEW QUESTION # 43

Which vSphere feature reduces the time required to patch and update multiple ESXi hosts in a cluster by using a centralized repository and automated workflows?

- A. vSphere Lifecycle Manager (vLCM)
- B. Enhanced vMotion Compatibility (EVC)
- C. vSAN Health Service
- D. Host Profiles

Answer: A

Explanation:

vSphere Lifecycle Manager allows administrators to centrally manage ESXi images and automate patching tasks across multiple

hosts, streamlining updates while minimizing manual intervention.
