VMware Cloud Foundation 9.0 Administrator Sample Questions (Q23-Q28):

NEW QUESTION # 23
An administrator of a VMware Cloud Foundation (VCF) fleet is tasked to delegate the resource management of a group of Virtual Machines (VMs) to another department. The following information is provided:
- VMs should power on only if resources are available.
- The VMs are within development and production environments.
- The production VMs require guaranteed levels of resources.
- The VMs support a three-tier application within each environment.
- Each tier of the application has varying levels of demand.
What VCF feature should the administrator use to manage these VMs?

- A. vSphere Dynamic Resource Scheduling
- B. vSphere Availability

- C. vSphere Resource Pools
- D. VCF Operations

Answer: C

Explanation:
Resource pools provide resource isolation, control, and delegation. You can configure reservations, limits, and shares to ensure that mission-critical workloads (such as production VMs) receive guaranteed resources, while development or test workloads consume only available resources.
This aligns directly with the requirements:
Power on only if resources are available - Achieved via reservations and limits.
Production VMs require guaranteed levels of resources - Enforced using reservations.
Three-tier apps with varying demand - Controlled using shares and limits across multiple resource pools.

NEW QUESTION # 24
During the deployment of a VI workload domain using SDDC Manager, an administrator encounters issues with host configuration. Which three steps should be followed to troubleshoot and resolve the configuration issues? (Choose three.)

- A. Ensure that all ESXi hosts have the correct version of ESXi installed.
- B. Reconfigure the NSX Edge nodes.
- C. Verify that all ESXi hosts are connected to the management network.
- D. Check the compatibility of the hardware with VMware Cloud Foundation requirements.
- E. Restart the SDDC Manager appliance to reset configurations.

Answer: A,C,D

Explanation:
Verifying hardware compatibility with VMware Cloud Foundation requirements is essential. If the hardware is not compatible, configuration issues can arise during deployment.
Ensuring that the ESXi hosts have the correct version installed is crucial because mismatched versions can lead to configuration failures.
Verifying that all ESXi hosts are connected to the management network is important because connectivity issues between hosts and management components can prevent proper configuration during deployment.

NEW QUESTION # 25
An administrator is responsible for managing a VMware Cloud Foundation (VCF)-based private cloud. The private cloud consists of a single tenant with two projects: Development and Production. The administrator has been tasked with ensuring that, when users deploy new VMware Supervisor- based resources within the private cloud, they meet the following criteria:
- By default, all Kubernetes clusters must tolerate a single control
plane node failure.
- Only Kubernetes cluster resources will be deployed within the
production project.
- In the development project, resources must be minimized.
Which three actions should the administrator take to meet the objective? (Choose three.)

- A. Create a new IaaS Resource Policy for the production project using the Enforce single-control- node Kubernetes cluster template.
- B. Create a new IaaS Resource Policy for the production project using the Disallow VM resource template.
- C. Create a new IaaS Resource Policy for the development project using the Enforce multi-control- node Kubernetes cluster template.
- D. Create a new IaaS Resource Policy for the development project using the Enforce single-control- node Kubernetes cluster template.
- E. Create a new IaaS Resource Policy for the organization using the Enforce multi-control-node Kubernetes cluster template.
- F. Create a new IaaS Resource Policy for the organization using the Disallow VM resource template.

Answer: B,C,D

Explanation:
For the production project, only Kubernetes resources are allowed, so administrators must disallow VM deployments (A).

To tolerate a single control plane node failure, production clusters should use multi-control-plane node templates, ensuring availability (B).

In the development project, resources should be minimized, so a single-control-plane node policy is enforced (D), which reduces overhead.

NEW QUESTION # 26

Which VMware vSphere feature provides the ability to define and apply datastore capabilities to ensure virtual machines meet specific performance and availability requirements?

- A. Performance Service
- B. Storage Policies
- C. Storage Policy Components
- D. Host Profiles

Answer: B

Explanation:
Storage Policies in VMware vSphere allow administrators to define and apply specific storage requirements for virtual machines, ensuring they meet desired performance and availability standards. These policies enable the alignment of VM storage needs with the capabilities of the underlying datastores.

NEW QUESTION # 27

An administrator is using VMware Aria Automation to automate the provisioning of virtual machines in their VMware Cloud Foundation environment. They notice that the automation workflows are failing frequently and want to troubleshoot the issue. What step should the administrator take in VMware Aria Operations for Logs to diagnose the cause of the automation workflow failures?

- A. Review the Alert Definitions to ensure alerts for workflow failures are configured.
- B. Check the Audit Logs to see if there are any unauthorized access attempts.
- C. Access the Dashboard to get an overview of system health and performance metrics.
- D. Use the Interactive Analytics feature to search for error messages related to the workflows.

Answer: D

Explanation:
To diagnose the cause of automation workflow failures in VMware Aria Automation, the Interactive Analytics feature in VMware Aria Operations for Logs allows administrators to search for error messages and filter logs related to the specific workflows. This feature enables detailed analysis of log data to identify any underlying issues causing the failures.
