

# 2V0-17.25 Valid Test Pattern - 2V0-17.25 Study Materials

What is more difficult is not only passing the VMware 2V0-17.25 Certification Exam, but the acute anxiety and the excessive burden also make the candidate nervous to qualify for the VMware Cloud Foundation 9.0 Administrator certification. If you are going through the same tough challenge, do not worry because VMware is here to assist you.

As everybody knows, the most crucial matter is the quality of VMware Cloud Foundation 9.0 Administrator study question for learners. We have been doing this professional thing for many years. Let the professionals handle professional issues. So as for us, we have enough confidence to provide you with the best 2V0-17.25 Exam Questions for your study to pass it. Only with strict study, we write the latest and the specialized study materials. We can say that our 2V0-17.25 exam questions are the most suitable for examinee to pass the exam.

## VMware 2V0-17.25 Study Materials - Exam Dumps 2V0-17.25 Demo

Our VMware 2V0-17.25 demo products hold the demonstration for our actual products, demos are offered at no cost only for raising your confidence level. Procure the quality of our product in advance, unsighted featured becomes reveal with our 2V0-17.25 Demo products. Free Private Cloud Monitoring and Operations with demos respond to all kind of worries that customers have in their mind while going for actual purchase.

## VMware Cloud Foundation 9.0 Administrator Sample Questions (Q24-Q29):

### NEW QUESTION # 24

An administrator has been tasked with creating an alert in VMware Cloud Foundation (VCF) Operations with the following settings:

- Wait cycle: 2
- Cancel cycle: 2

Assuming the alert is not resolved, how much time elapses by default between the symptom triggering and the alert automatically cancelling itself?

- A. 4 minutes
- B. 40 minutes
- C. 20 minutes
- D. 10 minutes

**Answer: C**

Explanation:

Wait Cycle: The number of consecutive collection cycles that the symptom must remain true before the alert is triggered.

Cancel Cycle: The number of consecutive collection cycles that the symptom must not be true before the alert is canceled.

Default Collection Interval: VCF Operations collects data every 5 minutes by default.

Given the settings:

Wait cycle = 2 The condition must persist for 2 \* 5 minutes = 10 minutes before the alert triggers.

Cancel cycle = 2 The condition must clear for 2 ?5 minutes = 10 minutes before the alert cancels.  
 Thus, the total elapsed time between the symptom being triggered and the alert being automatically canceled (if unresolved) is 10 minutes wait + 10 minutes cancel = 20 minutes.

### NEW QUESTION # 25

A company plans to enhance its DevOps practices by implementing Kubernetes as part of a VMware Cloud Foundation (VCF) environment.

Which three steps must an administrator perform to achieve this integration? (Choose three.)

- A. Deploy NSX to manage the networking for Kubernetes clusters.
- B. Enable IaaS control plane on existing vSphere clusters.
- C. Deploy HCX to migrate existing VMs to Kubernetes.
- D. Configure Aria Automation to automate the deployment of Kubernetes clusters.
- E. Configure storage policies for Kubernetes cluster namespace consumption.

**Answer: A,B,E**

Explanation:

You must enable the IaaS control plane (Workload Management/vSphere Supervisor) on your vSphere clusters via SDDC Manager to provide the Kubernetes control plane.

Defining storage policies ensures that your Kubernetes Namespaces can consume persistent storage that meets application requirements.

NSX must be deployed (and an Edge cluster available) to provide networking, load balancing, and security services for the Kubernetes Pods and control plane.

### NEW QUESTION # 26

DRAG DROP

Put the following steps in the correct order to update the driver/firmware in vSAN.

|                                                                                                    |        |
|----------------------------------------------------------------------------------------------------|--------|
| Verify that the new driver and firmware versions are active and the host is functioning correctly. | Step 1 |
| Download the latest driver and firmware from the hardware vendor's website.                        | Step 2 |
| Apply the firmware update to the host using the vendor's update tool.                              | Step 3 |
| Plan for a maintenance window to perform the update.                                               | Step 4 |
| Check the current driver and firmware versions using the vSphere Client.                           | Step 5 |
| Reboot the host to complete the update process.                                                    | Step 6 |
| Update the driver using the vSphere Lifecycle Manager (vLCM)                                       | Step 7 |

**Answer:**

Explanation:

|                                                                                                    |                                                                                                    |
|----------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| Verify that the new driver and firmware versions are active and the host is functioning correctly. | Plan for a maintenance window to perform the update.                                               |
| Download the latest driver and firmware from the hardware vendor's website.                        | Check the current driver and firmware versions using the vSphere Client.                           |
| Apply the firmware update to the host using the vendor's update tool.                              | Download the latest driver and firmware from the hardware vendor's website.                        |
| Plan for a maintenance window to perform the update.                                               | Apply the firmware update to the host using the vendor's update tool.                              |
| Check the current driver and firmware versions using the vSphere Client.                           | Update the driver using the vSphere Lifecycle Manager (vLCM)                                       |
| Reboot the host to complete the update process.                                                    | Reboot the host to complete the update process.                                                    |
| Update the driver using the vSphere Lifecycle Manager (vLCM)                                       | Verify that the new driver and firmware versions are active and the host is functioning correctly. |

#### NEW QUESTION # 27

An administrator is tasked to deploy a new vSAN Storage Cluster to an existing VCF instance. The VCF instance is deployed as a single workload domain. What must the administrator do to achieve this without deploying additional management components?

- A. Deploy a second cluster as a vSAN storage cluster in the existing workload domain.
- B. Deploy additional hosts as vSAN storage-only nodes within the existing cluster.
- C. Deploy an additional workload domain with a vSAN storage cluster within the existing VCF instance.
- D. Deploy an additional VCF instance and workload domain with a vSAN storage cluster.

**Answer: A**

Explanation:

Comprehensive and Detailed

The VCF 9.0 Architecture and Deployment Guide explains that within a single Workload Domain, administrators can scale resources by adding additional clusters, including compute or vSAN storage clusters. Specifically, "A Workload Domain can contain multiple clusters. You can deploy a new cluster, such as a vSAN cluster, into an existing domain without introducing new management components."

Options A and D both introduce new workload domains or VCF instances, which require their own management stack (vCenter, NSX Manager, etc.) and are unnecessary in this scenario. Option B is incorrect because "vSAN storage-only nodes" are supported in vSAN but are not the method for adding a new cluster within VCF automation. The correct approach is deploying a second cluster inside the same workload domain-this reuses the existing management components while meeting the requirement for a new vSAN storage cluster.

#### NEW QUESTION # 28

An organization requires a private cloud with robust availability and disaster recovery capabilities.

Which three VMware Cloud Foundation components should be considered for integration to meet these requirements? (Choose three.)

- A. vSAN for hyper-converged storage and downtime avoidance.
- B. vSphere Replication for VM-level data replication.
- C. Aria Operations for Logs for enhanced logging and monitoring.
- D. NSX for secure and isolated networking.
- E. VMware Live Site Recovery (VLSR) for orchestrated disaster recovery.

**Answer: B,D,E**

Explanation:

NSX provides network virtualization, offering secure, isolated networking that is crucial for ensuring robust availability and disaster recovery. It supports micro-segmentation and advanced network management features.

VMware Live Site Recovery (VLSR) provides orchestrated disaster recovery capabilities, enabling the organization to efficiently recover workloads and applications in case of a disaster.

vSphere Replication enables VM-level data replication, allowing for recovery and continuity of business operations by ensuring data is replicated across sites for high availability and disaster recovery.

## NEW QUESTION # 29

.....

If you fail in the exam, we will refund you in full immediately at one time. After you buy our VMware Cloud Foundation 9.0 Administrator exam torrent you have little possibility to fail in exam because our passing rate is very high. But if you are unfortunate to fail in the exam we will refund you immediately in full and the process is very simple. If only you provide the scanning copy of the 2V0-17.25 failure marks we will refund you immediately. If you have any doubts about the refund or there are any problems happening in the process of refund you can contact us by mails or contact our online customer service personnel and we will reply and solve your doubts or questions timely.
