VMware Cloud Operations 8.x Professional V2 Sample Questions (Q57-Q62):

NEW QUESTION # 57
An administrator would like to limit the access in vRealize Log Insight for application developers to a specific group of hosts where their application is running.
What should the administrator to configure satisfy this requirement?

- A. Define a data set with required ESXi hosts and associate it with a role.
- B. Make sure that all ESXi hosts are added to the same vSphere HA/DRS cluster.
- C. Create a DRS Host group and assign the users as part of the role assignment in vRealize Log Insight.
- D. Define a data set with required ESXi hosts and associate it with the vSphere content pack.

Answer: A

Explanation:
To limit access in vRealize Log Insight for application developers to a specific group of hosts, the administrator can define a dataset that includes only the required ESXi hosts where the application is running, and then associate this data set with a specific role. By doing this, the administrator ensures that the developers only have access to the logs from those specific hosts.
This method leverages the role-based access control (RBAC) in vRealize Log Insight, allowing granular control over the logs that users can access based on their assigned role and the data sets to which they are associated.

NEW QUESTION # 58
An administrator is attempting to install a new management pack on to a 2-node vRealize Operations cluster but the installation is failing.
Which two actions can the administrator take to troubleshoot the issue? (Choose two.)

- A. Run the $VMWARE_PYTHON_3_BIN /usr/lib/vmware-casa/bin/Netcheck.py script.
- B. Run the $VMWARE_PYTHON_3_BIN /tmp/Netcheck.py script.
- C. Log into each vRealize Operations node in the cluster as root.
- D. Log into each vRealize Operations node in the cluster as admin.
- E. Log into the Primary vRealize Operations node for the cluster as admin.

Answer: D,E

Explanation:
Log into each vRealize Operations node in the cluster as admin: Troubleshooting should start by logging into both nodes (or at least the primary node) as an admin user to check for any errors or configuration issues that might be affecting the management pack installation.
Log into the Primary vRealize Operations node for the cluster as admin: The primary node often holds key configuration and management tasks, so troubleshooting on this node can provide more insight into the issue.

- A. Three node deployment with an external load balancer
- B. Single node deployment with an external load balancer
- C. Single node deployment with the integrated load balancer
- D. Ten node deployment with the integrated load balancer
- E. Two node deployment with the integrated load balancer
- F. Single node deployment with no load balancer

Answer: A,E,F

Explanation:
Two node deployment with the integrated load balancer: vRealize Log Insight supports a two-node deployment with an integrated load balancer, providing redundancy and load distribution.
Three node deployment with an external load balancer: A three-node deployment with an external load balancer is a valid and scalable option, ensuring high availability and load balancing.
