NEW QUESTION # 618

An engineer configured a DHCP server for Cisco IP phones to download its configuration from a TFTP server, but the IP phones failed to load the configuration. What must be configured to resolve the issue?

- A. DHCP option 69
- B. BOOTP port 67
- C. BOOTP port 68
- **D. DHCP option 66**

Answer: D

Explanation:

Command	Purpose
<code>dhcpd option 66 ascii server_name</code>	Provides the IP address or name of a TFTP server for option 66.

Example:

```
hostname(config)# dhcpd option 66 ascii  
exampleserver
```

DHCP options 3, 66, and 150 are used to configure Cisco IP Phones. Cisco IP Phones download their configuration from a TFTP server. When a Cisco IP Phone starts, if it does not have both the IP address and TFTP server IP address preconfigured, it sends a request with option 150 or 66 to the DHCP server to obtain this information. + DHCP option 150 provides the IP addresses of a list of TFTP servers. + DHCP option 66 gives the IP address or the hostname of a single TFTP server.
