NEW QUESTION # 136

Which policy blocks TLOCs from remotes and allows TLOCs from the data center to form hub-and-spoke peering?

- A. centralized data policy
- B. localized data policy
- C. localized control policy
- D. centralized control policy

Answer: A

Explanation:

Centralized data policy applies to the flow of data traffic throughout the VPNs in the overlay network. These policies can permit and restrict access based either on a 6-tuple match (source and destination IP addresses and ports, DSCP fields, and protocol) or on VPN membership. These policies are pushed to the selected Cisco vEdge devices.

NEW QUESTION # 137

```
vManage#show control local-properties
personality                vmanage
sp-organization-name       Cisco
organization-name          Cisco
system-ip                  10.1.1.10
root-ca-chain-status       Installed
certificate-status          Installed
```

- A. Configure a valid system IP on the vBond controller.
- B. Configure NTP on both controllers to establish a connection.
- C. Synchronize the WAN Edge list on vManage with controllers.

- A. HTTP loss and latency metrics to the gateway site
- **B. HTTP loss and latency metrics to the SaaS application**
- C. BFD loss and latency metrics to the SaaS application
- D. ICMP loss and latency metrics to the SaaS application
- **E. BFD loss and latency metrics to the gateway site**

Answer: B,E

Explanation:

-The gateway vEdge uses HTTP to obtain SaaS application performance information - The client vEdge will use BFD over the IPSec tunnel to the gateway site to obtain client>gateway path performance information
