### Cisco Automating and Programming Cisco Enterprise Solutions Sample Questions (Q133-Q138):

#### NEW QUESTION # 133

A programmer is creating a Meraki webhook python script to send a message to webex teams. Which two elements should be configured to create this script? (Choose two.)

- A. gRPC credentials
- B. User authentication count
- **C. Webex teams access token**
- D. XML formatted request
- **E. Webhook server secret**

**Answer: C,E**

Explanation:

To create a Meraki webhook Python script that sends a message to Webex Teams, the programmer needs to configure the Webex Teams access token and the webhook server secret. The access token is necessary for authenticating with the Webex Teams API, allowing the script to send messages on behalf of a user or bot. The webhook server secret is used to secure communication between Meraki and the receiving server, ensuring that messages are not tampered with during transit.
