NEW QUESTION # 12

What are three requirements for a static IPv6-in-IPv4 tunnel? (Choose three.)

- A. Cisco Express Forwarding must be enabled.

- B. A static IPv6 address must be configured.
- C. A dynamic IPv6 address must be configured.
- D. A static IPv4 address must be configured.
- E. A dynamic IPv4 address must be configured.
- F. Each tunnel endpoint must support IPv4 and IPv6.

Answer: B,D,F

Explanation:

An IPv6 address is manually configured on a tunnel interface, and manually configured IPv4 addresses are assigned to the tunnel source and the tunnel destination. The host or device at each end of a configured tunnel must support both the IPv4 and IPv6 protocol stacks. Manually configured tunnels can be configured between border devices or between a border device and a host. Cisco Express Forwarding switching can be used for IPv6 manually configured tunnels, or Cisco Express Forwarding switching can be disabled if process switching is needed.
