## 300-510 - Implementing Cisco Service Provider Advanced Routing Solutions – Reliable Online Version

We prepare everything you need to prepare, and help you pass the exam easily. The 300-510 exam braindumps of us have the significant information for the exam, if you use it, you will learn the basic knowledge as well as some ways. We offer free update for you, and you will get the latest version timely, and you just need to practice the 300-510 Exam Dumps. We believe that with the joint efforts of both us, you will gain a satisfactory result.

To take the Cisco 300-510 certification exam, candidates need to have a solid understanding of the fundamentals of routing and switching, as well as experience with configuring and troubleshooting Cisco routers and switches in a service provider network environment. They should also have a good understanding of IP addressing and routing protocols such as OSPF and BGP. 300-510 Exam consists of 60-70 questions and lasts for 90 minutes.

## **Cisco Implementing Cisco Service Provider Advanced Routing Solutions Sample Questions (Q28-Q33):**

### **NEW QUESTION # 28**

Refer to the exhibit.

Refer to the exhibit. CE1 and CE2 use connectivity over the service provider cloud to reach CE3. In the event of a link failure in the service provider cloud which BGP feature relies on IGP convergence to quickly assist in the installation of a backup path?

- A. BGP graceful restart
- B. BGP route dampening
- C. BGP PIC core
- D. BGP confederations

**Answer: C**

### **NEW QUESTION # 29**

Refer to the exhibit.

A network operator wants to expand the segment routing global block in upcoming maintenance. The operator must ensure that the changes to the segment routing global block have no adverse impacts on the prefix-sid associated with the loopback0 interface used within the OSPF domain.

Which command can the operator use to enforce R2 to have a strict prefix-sid assignment to loopback0?

- A. 

```
router ospf 1
  area 0
  interface Loopback0
    prefix-sid index 19002 explicit-null
```
- B. 

```
router ospf 1
  area 0
  interface Loopback0
    prefix-sid absolute 13002
```
- C. 

```
router ospf 1
  area 0
  interface Loopback0
    prefix-sid absolute 19002
```
- D. 

```
router ospf 1
  area 0
  interface Loopback0
    prefix-sid index 19002
```

- A. Option A
- **B. Option C**
- C. Option B
- D. Option D

**Answer: B**

#### NEW QUESTION # 30

Refer to the exhibit.

```
Router(config-router)#no bgp client-to-client reflection intra-cluster cluster-id 192.168.1.1
```

Routers within the cluster are not receiving the desired prefixes. What must be done to fix the issue?

- A. No client-to-client must be disabled.
- B. Clients in that cluster must have full mesh connectivity between eBGP peers.
- C. No client-to-client reflection must be enabled.
- **D. Clients in that cluster must have full mesh connectivity between iBGP peers.**

**Answer: D**

#### NEW QUESTION # 31

Refer to the exhibit.

|                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                       |
