The services provided by our 300-620 test questions are quite specific and comprehensive. First of all, our test material comes from many experts. The gold content of the materials is very high, and the updating speed is fast. By our 300-620 exam prep, you can find the most suitable information according to your own learning needs at any time, and make adjustments and perfect them at any time. Our 300-620 Learning Materials not only provide you with information, and our 300-620 learning guide is tailor-made for you, according to the timetable to study and review.

Cisco 300-620 certification exam is a crucial step for IT professionals who want to specialize in implementing Cisco Application Centric Infrastructure (ACI). Implementing Cisco Application Centric Infrastructure certification process is designed to equip candidates with the necessary knowledge and practical skills to design, configure, and manage Cisco ACI solutions. 300-620 exam is also designed to evaluate the ability of candidates to troubleshoot and optimize Cisco ACI infrastructure.

Cisco 300-620 (Implementing Cisco Application Centric Infrastructure) Exam is a certification exam offered by Cisco Systems, Inc. It is designed for IT professionals who are interested in implementing, configuring, and managing Cisco's Application Centric Infrastructure (ACI). 300-620 exam is an entry-level certification that is highly valued by enterprises seeking to modernize their infrastructure and make it more agile, flexible, and secure.

2025 Cisco High-quality 300-620: Valid Implementing Cisco Application Centric Infrastructure Exam Topics

The Implementing Cisco Application Centric Infrastructure (300-620) certification is a valuable credential that every Cisco professional should earn it. The 300-620 certification exam offers a great opportunity for beginners and experienced professionals to demonstrate their expertise. With the Implementing Cisco Application Centric Infrastructure (300-620) certification exam everyone can upgrade their skills and knowledge. There are other several benefits that the Cisco 300-620 exam holders can achieve after the success of the Implementing Cisco Application Centric Infrastructure (300-620) certification exam.

Cisco 300-620 Exam, also known as Implementing Cisco Application Centric Infrastructure (DCACI), is a certification exam that is designed to test the knowledge and skills of IT professionals who are responsible for implementing and managing Cisco Application Centric Infrastructure (ACI). Implementing Cisco Application Centric Infrastructure certification is intended for those who have experience in data center technologies and possess a good understanding of networking, virtualization, and storage technologies.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q275-Q280):

NEW QUESTION # 275

Which two protocols support accessing backup files on a remote location from the APIC? (Choose two.)

- A. HTTPS
- B. TFTP
- C. SMB
- D. FTP
- E. SFTP

Answer: D,E

Explanation:

The two protocols that support accessing backup files on a remote location from the APIC are FTP (File Transfer Protocol) and SFTP (SSH File Transfer Protocol). Both FTP and SFTP allow for the transfer of files to and from a remote location, but SFTP provides an additional layer of security by utilizing SSH.

NEW QUESTION # 276

Refer to the exhibit.

A Cisco ACI fabric is newly deployed, and the security team requires more visibility of all inter-EPG traffic flows. All traffic in a VRF must be forwarded to an existing firewall pair. During failover, the standby firewall must continue to use the same IP and MAC as the primary firewall. Drag and drop the steps from the left into the Implementation order on the right to configure the service graph that meets the requirements. (Not all steps are used.)

Apply a service graph template and select v2Any EPG as the consumer and provider.	Step 1
Select a redirect policy with the Layer 3 destination.	Step 2
Create a Layer 4 to Layer 7 service graph template.	Step 3
Select a redirect policy with enabled anycast and the Layer 3 destination.	Step 4
Select the same cluster interface under Consumer Connector and Provider Connector.	Step 5
Create a service bridge domain and a Layer 4 to Layer 7 device with one cluster interface.	Step 6
Select the existing contract with custom IP EtherType filter.	

Answer:

Explanation:

Apply a service graph template and select vzAny EPG as the consumer and provider.	Create a service bridge domain and a Layer 4 to Layer 7 device with one cluster interface.
Select a redirect policy with the Layer 3 destination.	Create a Layer 4 to Layer 7 service graph template.
Create a Layer 4 to Layer 7 service graph template.	Select a redirect policy with enabled anycast and the Layer 3 destination.
Select a redirect policy with enabled anycast and the Layer 3 destination.	Select the existing contract with custom IP EtherType filter.
Select the same cluster interface under Consumer Connector and Provider Connector.	Select the same cluster interface under Consumer Connector and Provider Connector.
Create a service bridge domain and a Layer 4 to Layer 7 device with one cluster interface.	Apply a service graph template and select vzAny EPG as the consumer and provider.
Select the existing contract with custom IP EtherType filter.	

NEW QUESTION # 277

Refer to the exhibit.

Create L4-L7 Devices

General

Name: test-device

Service Type: Firewall

Device Type: ☐ PHYSICAL ☒ VIRTUAL

VMM Domain: west

Trunking Port: ☐

VM Instantiation Policy: select an option

Promiscuous Mode: ☐

Context Aware: ☐ Multiple ☒ Single

Function Type: ☒ GoThrough ☐ GoTo ☐ L1 ☐ L2

Devices

The configuration can comprise a single device, two devices (such as an active-standby HA pair), or two or more standalone devices in a scale-out pool.

Name	VM Name	vCenter Name	Interfaces
test-device-VM1	Razboni-City/VRF-1[EPG-1]...	mspl-vcenter	one-armed-IF

Cluster Interfaces:

Name	Concrete Interfaces	Enhanced Lag Policy
one-armed-IF	test-device-VM1/one-armed-IF	

Refer to the exhibit. An engineer configures a Layer 4 to Layer 7 device object. The device is a virtual firewall with a single network adapter and it must be deployed in routed mode. Which .. completes the configuration of the device object?

- A. Change context awareness to Multiple.
- B. Enable Promiscuous Mode.
- C. Change Function Type to GoTo.
- D. Add an outside interface to the cluster interfaces.

Answer: C

Explanation:

<https://www.cisco.com/c/en/us/td/docs/dcn/aci/apic/6x/l4-l7-configuration/cisco-apic-layer-4-to-layer-7-services-deployment-guide-60x/defining-a-logical-device-60x.html>

NEW QUESTION # 278

Which method does the Cisco ACI fabric use to load-balance multidestination traffic?

- A. shortest-path trees
- **B. forwarding tag trees**
- C. spanning trees
- D. PIM routing

Answer: B

Explanation:

The method that the Cisco ACI fabric uses to load-balance multidestination traffic is forwarding tag trees³. This method involves assigning a forwarding tag (FTAG) to the traffic when it is forwarded within the fabric, ensuring efficient load balancing of multi-destination traffic³.

https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/1-x/aci-fundamentals/b_ACI-Fundamentals/b_ACI-Fundamentals_chapter_010010.html

The ACI fabric uses Forwarding Tag (FTAG) trees to load balance multi-destination traffic. All multi-destination traffic is forwarded in the form of encapsulated IP multicast traffic within the fabric. The ingress leaf assigns an FTAG to the traffic when forwarding it to the spine. The FTAG is assigned in the packet as part of the destination multicast address. In the fabric, the traffic is forwarded along the specified FTAG tree. Spine and any intermediate leaf switches forward traffic based on the FTAG ID. One forwarding tree is built per FTAG ID. Between any two nodes, only one link forwards per FTAG. Because of the use of multiple FTAGs, parallel links can be used with each FTAG choosing a different link for forwarding. The larger the number of FTAG trees in the fabric means the better the load balancing potential is. The ACI fabric supports up to 12 FTAGs.

NEW QUESTION # 279

What is the name of the automatically configured VLAN 3600 presented during Cisco ACI fabric discovery?

```
101# show ip int brief vrf overlay-1
```

```
(output truncated for brevity...)
```

```
Interface Status for VRF "overlay-1"(4)
```

```
Interface Address Interface Status
```

```
49 unassigned protocol-up/link-up/admin-up
```

```
49.34 unnumbered protocol-up/link-up/admin-up
```

```
50 unassigned protocol-up/link-up/admin-up
```

```
50.35 unnumbered protocol-up/link-up/admin-up
```

```
10.233.44.30/27 protocol-up/link-up/admin-up
```

```
0.233.46.32/32 protocol-up/link-up/admin-up
```

```
3 10.233.44.32/32 protocol-up/link-up/admin-up
```

```
101# show vlan extended
```

```
Name Encap Ports
```

```
-----  
a:default vxlan-4 6 9660132, Eth1/1, Eth1/2, Eth1/47  
3600
```

- A. Fabric VLAN
- **B. Infrastructure VLAN**
- C. Loopback VLAN
- D. Transit VLAN

Answer: B

Explanation:

The Infrastructure VLAN is automatically configured during the Cisco ACI fabric discovery process. This VLAN, often referred to as the "infra VLAN," is used to enable internal communication between the ACI fabric components, such as the leaf and spine nodes. It is vital for the overlay network and the control plane functionality. In the provided output, VLAN 3600 represents the Infrastructure VLAN, which is configured for inter-node communication.
