

300-710 Exam Duration - Realistic New Securing Networks with Cisco Firepower Exam Questions Pass Guaranteed

Securing Networks: Your Ultimate Cisco Firepower 300-710 Exam Companion

In the ever-changing world that is cybersecurity, being ahead of the curve is not just a matter of goal, but essential. [Securing Networks with Cisco Firepower 300-710 Exam Practice Questions](#) is an important step in gaining a thorough understanding of network security. This comprehensive guide is your complete guide, offering tips, techniques, strategies and questions that will help you succeed in securing networks.

Understanding Cisco Firepower 300-710 Exam

Before diving into the intricacies of exam questions we must first understand the fundamentals. The Cisco Firepower 300-710 Exam is designed to assess your skills in the implementation of advanced firewalls, including setup, and troubleshooting of Cisco security equipment. This test will testify to your ability to provide solid security for your network using Cisco Firepower Threat Defense technology.

Key exam objectives

- 1. Firepower Threat Defense Architecture:** Learn about the structure and deployment methods that comprise Firepower Threat Defense (FTD).
- 2. Deployment:** Manage the use of Firepower Threat defense devices. Also, establish high-availability.

New 300-710 Exam Questions | 300-710 Exam Bible

Every Cisco aspirant wants to pass the Cisco 300-710 exam to achieve high-paying jobs and promotions. The biggest issue 300-710 exam applicants face is that they don't find credible platforms to buy real 300-710 exam dumps. When candidates don't locate actual Securing Networks with Cisco Firepower (300-710) exam questions they prepare from outdated material and ultimately lose resources. If you are also facing the same problem then you are at the trusted spot.

Cisco Securing Networks with Cisco Firepower Sample Questions (Q69-Q74):

NEW QUESTION # 69

An engineer is configuring a custom application detector for HTTP traffic and wants to import a file that was provided by a third party. Which type of files are advanced application detectors creates and uploaded as?

- A. Python program
- B. NBAR protocol
- C. Perl script
- **D. LUA script**

Answer: D

Explanation:

Explanation

A custom application detector is a user-defined script that can detect web applications, clients, and application protocols based on patterns in network traffic. Custom application detectors are written in LUA, which is a lightweight and embeddable scripting language. LUA scripts can use predefined functions and variables provided by the Firepower System to access packet data and metadata, and to specify the detection criteria and the application information.

To import a custom application detector file that was provided by a third party, you need to follow these steps:

In the FMC web interface, navigate to Objects > Object Management > Application Detectors.

Click Import.

Browse to the location of the LUA script file and select it.

Click Upload.

Review the detector details and click Save.

The other options are incorrect because:

Perl script is not a supported format for custom application detectors. Perl is a general-purpose programming language that is not embedded in the Firepower System.

NBAR protocol is not a file type, but a feature of Cisco IOS routers that can classify and monitor network traffic based on application types. NBAR protocols are predefined and cannot be imported as custom application detectors.

Python program is not a supported format for custom application detectors. Python is a general-purpose programming language that is not embedded in the Firepower System.

NEW QUESTION # 70

Refer to the exhibit.

An engineer is modifying an access control policy to add a rule to inspect all DNS traffic that passes it making the change and deploying the policy, they see that DNS traffic is not being inspected by the Snort engine. What is.....

- A. The rule must define the source network for inspection as well as the port.
- **B. The action of the rule is set to trust instead of allow.**
- C. The rule is configured with the wrong setting for the source port.
- D. The rule must specify the security zone that originates the traffic.

Answer: B

NEW QUESTION # 71

An administrator is adding a QoS policy to a Cisco FTD deployment. When a new rule is added to the policy and QoS is applied on "Interfaces in Destination Interface Objects", no interface objects are available. What is the problem?

- **A. QoS is available only on routed interfaces, and this device is in transparent mode.**
- B. The FTD is out of available resources for use, so QoS cannot be added.
- C. A conflict exists between the destination interface types that is preventing QoS from being added.

- D. The network segments that the interfaces are on do not have contiguous IP space

Answer: A

Explanation:

https://www.cisco.com/c/en/us/td/docs/security/firepower/640/configuration/guide/fpmc-config-guide-v64/quality_of_service_qos_for_firepower_threat_defense.html

NEW QUESTION # 72

Refer to exhibit. Which two descriptions of the configurations of the Cisco FirePOWER Services module are true? (Choose two)

```
ASA# show service-policy sfr

Global policy:
Service-policy: global policy
Class-map: SFR
SFR: card status Up, mode fail-open monitor-only
packet input 0, packet output 44715478687, drop 0, reset-drop 0
```

- A. Traffic is blocked if the module fails
- B. The module is operating in IDS mode
- C. The module is operating in IPS mode
- D. Traffic continues to flow if the module fails
- E. The module fails to receive redirected traffic

Answer: B,D

Explanation:

Showing Module Statistics

Use the show service-policy sfr command to display statistics and status for each service policy that includes the sfr command. Use clear service-policy to clear the counters.

The following example shows the ASA FirePOWER service policy and the current statistics as well as the module status. In monitor-only mode, the input counters remain at zero.

```
ciscoasa# show service-policy sfr

Global policy:
Service-policy: global_policy
Class-map: my-sfr-class
SFR: card status Up, mode fail-close
packet input 2626422041, packet output 2626877967, drop 0, reset-drop 0, proxied 0
```

NEW QUESTION # 73

Refer to the exhibit.

II. ASSESSMENT RESULTS	
AUTOMATING THE TUNING EFFORT	
During the assessment period, the following changes to your network were observed.	
NETWORK CHANGE TYPE	NUMBER OF CHANGES
A new operating system was found	310
A new host was added to the network	366
A device started using a new transport protocol	381
A device started using a new network protocol	373

And engineer is analyzing the Attacks Risk Report and finds that there are over 300 instances of new operating systems being seen

on the network How is the Firepower configuration updated to protect these new operating systems?

- A. Cisco Firepower automatically updates the policies.
- **B. Cisco Firepower gives recommendations to update the policies.**
- C. The administrator requests a Remediation Recommendation Report from Cisco Firepower
- D. The administrator manually updates the policies.

Answer: B

Explanation:
