Cisco Implementing Secure Solutions with Virtual Private Networks Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which configuration sets up spoke-to-spoke dynamic tunnels of FlexVPN?

- A. The `ip nhrp redirect` command is needed on the hub router virtual-template interface.
- B. The transform set mode must be tunnel mode between hub and spoke routers.
- C. The `ip nhrp nhs` command is needed on spoke routers tunnel interface.
- D. The tunnel mode must be IPsec between spoke and hub routers.

Answer: A

Explanation:

FlexVPN uses Next Hop Resolution Protocol (NHRP) to facilitate spoke-to-spoke communication dynamically. The `ip nhrp redirect` command is required on the hub router's virtual-template interface to enable the hub to redirect traffic between spokes, allowing them to establish direct dynamic tunnels instead of routing all traffic through the hub. This reduces latency and optimizes bandwidth usage.

NEW QUESTION # 56

What is a characteristic of GETVPN?

- A. All peers have one IPsec SPI for inbound and outbound communication.
- B. An ACL that defines interesting traffic must be configured and applied to the crypto map.
- C. Quick mode is used to create an IPsec SA.
- D. The remote peer for the IPsec session is configured as part of the crypto map.

Answer: A

NEW QUESTION # 57

Refer to the exhibit.

```
tunnel-group IKEV2 type remote-access
tunnel-group IKEV2 general-attributes
  address-pool split
  default-group-policy GroupPolicy1
tunnel-group IKEV2 webvpn-attributes
  group-alias ikev2 enable
```

```
-<HostEntry>
<HostName>ikev2</HostName>
<HostAddress>10.106.45.221</HostAddress>
<UserGroup>ikev2</UserGroup>
<PrimaryProtocol>IPsec</PrimaryProtocol>
</HostEntry>
```

The customer can establish a Cisco AnyConnect connection without using an XML profile. When the host "ikev2" is selected in the AnyConnect drop down, the connection fails. What is the cause of this issue?

- A. The HostName is incorrect.
- B. UserGroup must match connection profile.
- C. The IP address is incorrect.
- D. Primary protocol should be SSL.

Answer: B

Explanation:

Reference:

User Group-Specify a user group. The user group is used in conjunction with Host Address to form a group-based URL. If you specify the Primary Protocol as IPsec, the User Group must be the exact name of the connection profile (tunnel group). For SSL, the user group is the group-url of the connection profile.
