Accurate Cisco - 300-730 Cert Guide

Our 300-730 exam material boosts both the high passing rate which is about 98%-100% and the high hit rate to have few difficulties to pass the test. Our 300-730 exam simulation is compiled based on the resources from the authorized experts' diligent working and the real exam and confer to the past years' exam papers thus they are very practical. The content of the questions and answers of 300-730 Exam Questions is refined and focuses on the most important information. To let the clients be familiar with the atmosphere and pace of the real 300-730 exam we provide the function of stimulating the exam.

Cisco Implementing Secure Solutions with Virtual Private Networks Sample Questions (Q187-Q192):

NEW QUESTION # 187

Refer to the exhibit.

A Cisco ASA is configured as a client to a router running as a FlexVPN server. The router is configured with a virtual template to terminate FlexVPN clients. Traffic between networks 192.168.0.0/24 and 172.16.20.0/24 does not work as expected. Based on the show crypto ikev2 sa output collected from the Cisco ASA in the exhibit, what is the solution to this issue?

- A. Modify the crypto ACL on the router to permit network 172.16.20.0/24 to network 192.168.0.0/24.
- **B. Modify the crypto ACL on the ASA to permit network 192.168.0.0/24 to network 172.16.20.0/24.**
- C. Modify the crypto ACL on the router to permit network 192.168.0.0/24 to network 172.16.20.0/24.
- D. Modify the crypto ACL on the ASA to permit network 172.16.20.0/24 to network 192.168.0.0/24.

Answer: B

Explanation:

the show crypto ikev2 sa output from the ASA, the local selector is 192.168.0.0/24 the remote selector is 172.16.2.0/24 (which is wrong , should be .20.0/24) . so , the ACL in the ASA should be to permit 192.168.0.0/24 to 172.16.20.0/24

NEW QUESTION # 188

When troubleshooting FlexVPN spoke-to-spoke tunnels, what should be verified first?

- A. NHO routes exist on the spokes.
- **B. The spokes have sent a resolution request.**
- C. NHRP cache entries exist on the spoke.
- D. NHRP redirect is enabled on the hub.

Answer: B

Explanation:

The Next Hop Resolution Protocol (NHRP) redirect is not a strict requirement for FlexVPN spoke- to-spoke tunnels to function. NHRP redirect is typically used in DMVPN (Dynamic Multipoint Virtual Private Network) deployments to optimize the routing of traffic between spoke-to-spoke connections by allowing the hub to inform spokes about more efficient paths In a FlexVPN deployment, spokes send resolution requests to the hub for spoke-to-spoke communication. These resolution requests are typically related to Next Hop Resolution Protocol (NHRP) operations. NHRP is used in FlexVPN to dynamically map the public IP addresses of spokes to their private IP addresses, facilitating spoke-to-spoke communication without having to route all traffic through the hub.

NEW QUESTION # 189

A Cisco ASA is configured in active/standby mode. What is needed to ensure that Cisco AnyConnect users can connect after a failover event?

- A. Configure a backup server in the XML profile.
- B. The vpn-session-db must be cleared manually.
- C. AnyConnect images must be uploaded to both failover ASA devices.
- D. AnyConnect client must point to the standby IP address.

Answer: C

Explanation:

https://www.cisco.com/c/en/us/td/docs/security/asa/asa90/configuration/guide/asa_90_cli_config/ha_active_standby.html

NEW QUESTION # 190

Which benefit of FlexVPN is a limitation of DMVPN using IKEv1?

- A. GRE encapsulation allows for forwarding of non-IP traffic.
- B. NHRP authentication provides enhanced security.
- C. IKE implementation can install routes in routing table.
- D. Dynamic routing protocols can be configured.

Answer: C

Explanation:

Section: Secure Communications Architectures

NEW QUESTION # 191

Refer to the exhibit.

```
tunnel-group IKEV2 type remote-access
tunnel-group IKEV2 general-attributes
  address-pool split
  default-group-policy GroupPolicy1
tunnel-group IKEV2 webvpn-attributes
  group-alias ikev2 enable

-----

<HostEntry>
<HostName>ikev2</HostName>
<HostAddress>10.106.45.221</HostAddress>
<UserGroup>ikev2</UserGroup>
<PrimaryProtocol>IPsec</PrimaryProtocol>
</HostEntry>
```

The customer can establish a Cisco AnyConnect connection without using an XML profile. When the host "ikev2" is selected in the AnyConnect drop down, the connection fails. What is the cause of this issue?

- A. The HostName is incorrect.
- B. The IP address is incorrect.
- C. Primary protocol should be SSL.
- D. UserGroup must match connection profile.

Answer: D

Explanation:
