As is known to us, the leading status of the knowledge-based economy has been established progressively. It is more and more important for us to keep pace with the changeable world and improve ourselves for the beautiful life. So the 300-730 certification has also become more and more important for all people. Because a lot of people long to improve themselves and get the decent job. In this circumstance, more and more people will ponder the question how to get the 300-730 Certification successfully in a short time.

iPassleader provides the three most convenient formats to prepare for 300-730 exam dumps. It offers a desktop practice test, web based practice test and pdf file. Therefore, feel free to go through Implementing Secure Solutions with Virtual Private Networks (300-730) exam dumps. Each of the three formats is downloaded to all android devices. Therefore, there's no reason to download an additional application to access web-based or desktop-based practice tests.

How do iPassleader Cisco 300-730 Exam Questions Help You in Exam Preparation?

This 300-730 exam prep material has been prepared under the expert surveillance of 90,000 highly experienced IT professionals worldwide. This updated and highly reliable iPassleader product consists of 3 prep formats: Implementing Secure Solutions with Virtual Private Networks (300-730) dumps PDF, desktop practice exam software, and browser-based mock exam. Each format specializes in a specific study style and offers unique benefits, each of which is crucial to good Implementing Secure Solutions with Virtual Private Networks (300-730) exam preparation. The specs of each Cisco 300-730 exam questions format are listed below, you may select any of them as per your requirements.

Cisco Implementing Secure Solutions with Virtual Private Networks Sample Questions (Q143-Q148):

NEW QUESTION # 143

Refer to the exhibit.

```
hostname RouterA
interface GigabitEthernet 0/0/0
ip address 10.0.0.1 255.255.255.0
standby 1 priority 110
standby ikev1-cluster
end

crypto ikev2 cluster
standby-group ikev1-cluster
slave max-session 500
port 2000
no shutdown

crypto ikev2 redirect gateway init
```

Which type of VPN implementation is displayed?

- A. IKEv2 backup gateway
- **B. IKEv2 load balancer**
- C. IKEv1 cluster
- D. IKEv2 reconnect

Answer: B

NEW QUESTION # 144

Which command automatically initiates a smart tunnel when a user logs in to the WebVPN portal page?

- A. auto-connect
- **B. auto-start**
- C. auto-upgrade
- D. auto-run

Answer: B

Explanation:

Section: Remote access VPNs

Explanation/Reference: https://www.cisco.com/c/en/us/td/docs/security/asa/asa91/configuration/vpn/asa_91_vpn_config/webvpn-configure-policy-group.html

NEW QUESTION # 145

Refer to the exhibit.

```

Flex-spoke#crypto ikev2 authorization policy default
route set interface
route set remote ipv4 192.168.200.0 255.255.255.0

Flex-spoke#crypto ikev2 profile default
aaa authorization group psk list default default

!--- Output is truncated ---!

Flex-spoke#show crypto ikev2 sa detailed
IPv4 Crypto IKEv2 SA

Tunnel-Id Local          Remote          fvrf/ivrf      Status
1    10.0.20.41/500    172.18.3.143/500  none/none     READY
Encr: AES-CBC, keysize: 256, Hash: SHA512, DH Grp: 5, Auth sign: PSK, Auth verify: RSA
Life/Active Time: 86400/6845 sec
CE id: 1043, Session-Id: 22
Status Description: Negotiation done
Local spi: 3413E984EC151E8D   Remote spi: 924798D873F59132
Local id: 10.0.20.41
Remote id: hostname=flex-hub.cisco.com,cn=flex-hub.cisco.com
Local req msg id: 0           Remote req msg id: 4
Local next msg id: 0          Remote next msg id: 4
Local req queued: 0           Remote req queued: 4
Local window: 5               Remote window: 5
DPD configured for 60 seconds, retry 2
NAT-T is not detected
Cisco Trust Security SGT is disabled   Initiator of SA : No

Remote subnets:
10.0.0.1 255.255.255.255
192.168.100.0 255.255.255.0

IPv6 Crypto IKEv2 SA

```

An engineer has configured a spoke to connect to a FlexVPN hub. The tunnel is up, but pings fail when the engineer attempts to reach host 192.168.200.10 behind the spoke, and traffic is sourced from host 192.168.100.3, which is behind the FlexVPN server. Based on packet captures, the engineer discovers that host 192.168.200.10 receives the icmp echo and sends an icmp reply that makes it to the inside interface of the spoke. Based on the output in the exhibit captured on the spoke by the engineer, which action resolves this issue?

- A. Add the route set remote ipv4 192.168.200.0 255.255.255.0 command to the hub authorization policy.
- B. Add the aaa authorization group cert list default default command to the spoke ikev2 profile.
- C. Add the route set remote ipv4 192.168.100.0 255.255.255.0 command to the spoke authorization policy.
- D. Add the aaa authorization group cert list default default command to the hub ikev2 profile.

Answer: C

Explanation:

The problem is that the spoke does not have a route to the host 192.168.100.3, which is behind the FlexVPN server. The spoke only has a default route to the tunnel interface, which points to the FlexVPN hub. Therefore, when the spoke receives the icmp reply from host 192.168.200.10, it does not know how to forward it to host 192.168.100.3.

One way to solve this problem is to add a route to the host 192.168.100.3 on the spoke using the route set remote ipv4 command in the authorization policy on the spoke. This command allows the FlexVPN server to push a route to the FlexVPN client during IKEv2 authorization. For example:

crypto ikev2 authorization policy default route set remote ipv4 192.168.100.0 255.255.255.0 This way, the spoke will have a more specific route to host 192.168.100.3 via the tunnel interface, and will be able to forward the icmp reply correctly.

NEW QUESTION # 146

Which two are characteristics of GETVPN? (Choose two.)

- A. The same key encryption and traffic encryption keys are distributed to all Group Members
- B. A key server is elected among all configured Group Members
- C. The IP header of the encrypted packet is preserved
- D. Unique encryption keys are computed for each Group Member

Answer: A,C

NEW QUESTION # 147

Drag and Drop Question

Drag and drop the GET VPN components from the left onto the correct descriptions on the right.

Answer Area

KEK	gets the IPsec SA to encrypt data traffic within the group
TEK	provides group key and group SA management
GDOI protocol	maintains security policies and provides the session key for encrypting traffic
KS	encrypts the rekey message
GM	used by all the group members to communicate securely among each other

Answer:

Explanation:

Answer Area

GM
GDOI protocol
KS
KEK
TEK

NEW QUESTION # 148

.....

iPassleader Implementing Secure Solutions with Virtual Private Networks (300-730) Questions have numerous benefits, including the ability to demonstrate to employers and clients that you have the necessary knowledge and skills to succeed in the actual 300-730 exam. Certified professionals are often more sought after than their non-certified counterparts and are more likely to earn higher

salaries and promotions. Moreover, cracking the Implementing Secure Solutions with Virtual Private Networks (300-730) exam helps to ensure that you stay up to date with the latest trends and developments in the industry, making you more valuable assets to your organization.
