## Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q59-Q64):

### NEW QUESTION # 59

Cisco Secure Cloud Insights aids in cloud security by:

- A. Offering visibility into cloud assets for improved governance and risk management
- B. Simplifying attack vectors for easier exploitation
- C. Decreasing the granularity of cloud asset monitoring
- D. Focusing on non-cloud assets

**Answer: A**

### NEW QUESTION # 60

```
Ciscoasa# show vpn-sessiondb detail anyconnect
Username      : USER1      Index      : 1

tunnel-group Employee webvpn-attributes
pre-fill-username ssl-client
secondary-pre-fill-username ssl-client
group-alias Employee enable
```

Refer to the exhibit. An engineer must implement a remote access VPN solution that provides user and device verification. The company uses Active Directory for user authentication and ID certificates for device identity. Users are currently able to connect using only a valid username and password, even if their computer is missing the required certificate. Which command from the Cisco ASA tunnel-group completes the requirement of verifying device identity in addition to user identity?

- A. webvpn authorize-device
- **B. authentication aaa certificate**
- C. ldap-attribute-map PolicyAllow
- D. authentication mfa

**Answer: B**

Explanation:

To enforce both user-based and device-based authentication on Cisco ASA, the tunnel group must include the command: authentication aaa certificate. This configuration requires that both a valid username/password (authenticated via AAA, such as Active Directory) and a trusted certificate (device identity) are present before allowing VPN access. Without this directive, only username/password credentials are validated, which leads to the scenario described in the question.

#### NEW QUESTION # 61

\_\_\_\_\_ policies are crucial for restricting access to network resources based on the security health of a device.

- **A. Endpoint posture**
- B. Network segmentation
- C. Password
- D. Encryption

**Answer: A**

#### NEW QUESTION # 62

What must be automated to enhance the efficiency of a security team response?

- A. Changing firewall settings for every detected threat, regardless of its severity
- B. Changing all user passwords when a threat is detected
- C. Sending an email to the entire organization when a threat is detected
- **D. Isolating affected systems and applying predefined security policies**

**Answer: D**

Explanation:

Automation of containment and response actions-such as isolating compromised endpoints and applying predefined security policies-is a critical capability of Cisco's XDR and SecureX platform. According to SCAZT Section 6: Threat Response (Pages 112-117), automating threat containment allows security teams to rapidly limit the blast radius of incidents and improve mean time to respond (MTTR), without relying solely on manual intervention.

### NEW QUESTION # 63

Verifying user access to applications and data can be effectively done using:

- A. Random security audits once a year
- **B. Firewall logs for monitoring access attempts**
- C. Guesswork based on user complaints
- D. Personal interviews with users about their access patterns

**Answer: B**
