Cisco 300-740 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Application and Data Security This section of the exam measures skills of Cloud Security Analysts and explores how to defend applications and data from cyber threats. It introduces the MITRE ATT&CK framework, explains cloud attack patterns, and discusses mitigation strategies. Additionally, it covers web application firewall functions, lateral movement prevention, microsegmentation, and creating policies for secure application connectivity in multicloud environments.
Topic 2	<ul style="list-style-type: none"> User and Device Security: This section of the exam measures skills of Identity and Access Management Engineers and deals with authentication and access control for users and devices. It covers how to use identity certificates, enforce multifactor authentication, define endpoint posture policies, and configure single sign-on (SSO) and OIDC protocols. The section also includes the use of SAML to establish trust between devices and applications.
Topic 3	<ul style="list-style-type: none"> Cloud Security Architecture: This section of the exam measures the skills of Cloud Security Architects and covers the fundamental components of the Cisco Security Reference Architecture. It introduces the role of threat intelligence in identifying and mitigating risks, the use of security operations tools for monitoring and response, and the mechanisms of user and device protection. It also includes strategies for securing cloud and on-premise networks, as well as safeguarding applications, workloads, and data across environments.
Topic 4	<ul style="list-style-type: none"> Visibility and Assurance: This section of the exam measures skills of Security Operations Center (SOC) Analysts and focuses on monitoring, diagnostics, and compliance. It explains the Cisco XDR solution, discusses visibility automation, and describes tools for traffic analysis and log management. The section also involves diagnosing application access issues, validating telemetry for behavior analysis, and verifying user access with tools like firewall logs, Duo, and Cisco Secure Workload.
Topic 5	<ul style="list-style-type: none"> Network and Cloud Security: This section of the exam measures skills of Network Security Engineers and covers policy design for secure access to cloud and SaaS applications. It outlines techniques like URL filtering, app control, blocking specific protocols, and using firewalls and reverse proxies. The section also addresses security controls for remote users, including VPN-based and application-based access methods, as well as policy enforcement at the network edge.
Topic 6	<ul style="list-style-type: none"> SAFE Architectural Framework: This section of the exam measures skills of Security Architects and explains the Cisco SAFE framework, a structured model for building secure networks. It emphasizes the importance of aligning business goals with architectural decisions to enhance protection across the enterprise.
Topic 7	<ul style="list-style-type: none"> Integrated Architecture Use Cases: This section of the exam measures the skills of Cloud Solution Architects and covers key capabilities within an integrated cloud security architecture. It focuses on ensuring common identity across platforms, setting multicloud policies, integrating secure access service edge (SASE), and implementing zero-trust network access models for more resilient cloud environments.

Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q187-Q192):

NEW QUESTION # 187

Refer to the exhibit. An engineer must integrate Cisco Cloudlock with Salesforce in an organization. Despite the engineer's successful execution of the Salesforce integration with Cloudlock, the administrator still lacks the necessary visibility. What should be done to meet the requirement?

- A. From Cloudlock, configure the service parameters.
- **B. From Cloudlock, enable the View All Data permission.**
- C. From Salesforce, enable the View All Data permission.
- D. From Salesforce, configure the service parameters.

Answer: B

Explanation:

After Cloudlock is integrated with Salesforce, full visibility into objects and data requires that Cloudlock has the "View All Data" permission enabled on the connected Salesforce account. This permission allows the Cloudlock API connection to access all user data, regardless of individual field-level or sharing rules. Without it, Cloudlock will be limited in its visibility scope.

As per SCAZT (Section 4: Application and Data Security, Pages 86-89), integration with SaaS platforms like Salesforce must include enabling comprehensive data visibility to perform effective risk analysis and policy enforcement.
