## VMware vSphere 8.x Advanced Design Sample Questions (Q32-Q37):

### NEW QUESTION # 32

Which of the listed requirements would be classified as a recoverability non-functional requirement?

- A. The platform must be available 24 hours a day, 7 days a week with the exception of scheduled downtime.
- B. Maintenance windows must be scheduled to take place monthly during an established overnight period.
- C. The platform must be able to support a maximum tolerable downtime (MTD) of 30 minutes.
- D. The platform must be integrated with existing change control policies.

**Answer: C**

Explanation:

Recoverability - Easy to restore after an outage

Measurements : MTD, RPO, RTO

### NEW QUESTION # 33

The architect for a large enterprise is tasked with reviewing a proposed design created by a service partner.

Which design elements are expected to be detailed within the physical design section of the documentation?

- A. A list of requirements, constraints, and risks
- B. A design diagram illustrating the configuration and specific attributes, such as IP addresses
- C. An entity relationship diagram describing upstream and downstream dependencies for specific service components
- D. A solution architecture diagram with the components and data flow

**Answer: B**

Explanation:

The physical design is based on the logical design. The physical design includes specific hardware from specific vendors. This design also lists specific configurations for each of the components that are deployed.

### NEW QUESTION # 34

Which type of requirement focuses on the processing power and resources needed by the system?

- A. Network requirements
- B. Compute requirements
- C. Performance requirements
- D. Storage requirements

**Answer: B**

### NEW QUESTION # 35

An architect is responsible for extending the hosting design for a customer. The customer has a mission-critical 3-node application which is load balanced in an active/active/passive configuration. The application administrator requests that the virtual infrastructure team be responsible for maintaining platform level availability. An organizational policy exists to mandate the highest possible availability for mission-critical applications.

Based on the resource requirements, the architect has made the following design decision:

The target vSphere cluster contains three VMware ESXi host servers

A combination of which additional four physical design decisions should the architect make to maximize availability of the application? (Choose four.)

- A. The solution will create a virtual machine DRS group that contains all of the critical application workloads.
- B. The solution will create a VM-VM Affinity rule to keep virtual machines separate.
- C. The solution will enable vSphere High Availability (HA) with restart priority set to "Highest" for the application virtual machines.
- D. The solution will enable vSphere Fault Tolerance with vSphere High Availability (HA) virtual machine component failure enabled.
- E. The solution will create a host DRS group containing all hosts within the cluster.
- F. The solution will create a VM-VM Affinity rule to keep virtual machines together.
- G. The solution will create a VM-Host Affinity rule that specifies that workloads must run on hosts in a group.

**Answer: A,B,C,E**

### NEW QUESTION # 36

An architect is tasked with creating a design for a vSphere-based solution.

Reviewing requirements with the security team, the architect makes the following design decision:

ESXi hosts in the environment will enable shell sandbox for SSH connections and the local ESXi shell. What is an implication of the design decision to enable shell sandboxing?

- A. Only administrative accounts can access the sandbox shell
- B. All commands executed in the sandbox shell will be logged
- C. The vSphere 8 hosts will operate in strict lockdown mode
- D. Only certain commands can be executed in the sandboxed shell

**Answer: D**

Explanation:

When the shell sandbox is enabled on ESXi hosts, it restricts the execution of commands within the shell to ensure that only authorized or safe commands are allowed. This provides a level of isolation that limits the potential for accidental or malicious commands to be run in the shell, enhancing security while still providing necessary administrative access.
