### Cisco Designing Cisco Security Infrastructure Sample Questions (Q55-Q60):

#### NEW QUESTION # 55

A bank experienced challenges with compromised endpoints gaining access to the internal network. To enhance security, the bank wants to ensure that all endpoints are scanned for compliance check before being allowed to access the network. Which action achieves the level of security and control?

- A. Configure TrustSec using Cisco ISE.
- B. Use MFA using Cisco DUO.
- C. Set up data loss prevention policy.
- **D. Implement Posture validation using Cisco ISE.**

**Answer: D**

Explanation:

Posture validation with Cisco ISE checks endpoint compliance (such as antivirus status, patches, and security configurations) before granting network access. This ensures compromised or non-compliant endpoints are denied access, directly addressing the bank's security concern.

#### NEW QUESTION # 56

A developer company recently made a contract with new customer in the financial space. The customer has multiple remote sites and requires a VPN solution with the highest encryption.

Which protocol must be used in IPsec Phase 2?

- A. IKE
- B. SD-WAN
- C. ISAKMP
- D. ESP

**Answer: D**

Explanation:

In IPsec Phase 2, the Encapsulating Security Payload (ESP) protocol is used to provide confidentiality, integrity, and authentication for VPN traffic. ESP ensures the highest encryption and protection for sensitive financial data across remote sites.

#### NEW QUESTION # 57

A financial company uses a remote access solution that directs all traffic over a secure tunnel.

The company recently received some large ISP bills from the headcounter location. According to traffic analysis during the investigation, most of the network traffic was due to employees spending a lot of time on video conferences provided by a SaaS collaboration company. What must the company modify to reduce the cost without negatively impacting security or employee experience?

- A. Suggest users to disconnect from the VPN when on video calls.
- B. Reduce the video resolution size permitted within the SaaS application.
- C. Split-exclude the video SaaS application from the VPN.
- D. Block the video conferencing app when connected on VPN.

**Answer: C**

Explanation:

Split-exclusion allows trusted SaaS traffic (such as video conferencing) to bypass the VPN tunnel while keeping all other traffic secured. This reduces bandwidth costs at the headend location without degrading security or employee experience, since traffic to the SaaS provider is still encrypted natively.

#### NEW QUESTION # 58

A manufacturing company experienced a security breach that resulted in sales data being compromised. An engineer participating in the investigation must identify who logged into the sales system during the affected period. Which approach must be used to gather the information?

- A. PKI
- B. SNMP
- C. AAA
- D. NACM

**Answer: C**

Explanation:

AAA (Authentication, Authorization, and Accounting) provides accounting logs that record who logged in, when, and from where. During an investigation, these logs allow the security team to trace user logins to the sales system and identify who accessed it during the breach period.

#### NEW QUESTION # 59

Which financial reporting regulatory framework must a publicly traded company doing business in the US comply with?

- A. HIPAA

- **B. SOX**
- C. SOC
- D. FEDRAMP

**Answer: B**

Explanation:

Publicly traded companies in the United States must comply with the Sarbanes-Oxley Act (SOX).

This regulation mandates strict standards for financial reporting, internal controls, and data integrity to protect investors from fraudulent financial practices.
