

LEED-Green-Associate완벽한덤프공부자료 - LEED-Green-Associate퍼펙트공부문제

IT인증시험이 다가오는데 어느 부분부터 공부해야 할지 망설이고 있다구요? 가장 간편하고 시간을 절약하며 한방에 자격증을 취득할수 있는 최고의 방법을 추천해드립니다. 바로 우리Fast2test IT인증덤프제공사이트입니다. Fast2test는 고품질 고적중율을 취지로 하여 여러분들인 한방에 시험에서 패스하도록 최선을 다하고 있습니다. USGBC인증LEED-Green-Associate시험준비중이신 분들은Fast2test 에서 출시한USGBC인증LEED-Green-Associate 덤프를 선택하세요.

USGBC LEED-Green-Associate 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Integrative Strategies: This section of the exam measures the skills of project managers and focuses on the integrative process in LEED projects. It includes understanding the roles of various team members and standards that support LEED, such as ASHRAE and ENERGY STAR guidelines. This section highlights the importance of collaboration and systems thinking in achieving sustainable design.
주제 2	<ul style="list-style-type: none"> Water Efficiency: This section of the exam measures the skills of water conservation specialists and covers strategies for reducing water usage both indoors and outdoors. It includes the use of gray water and rainwater in irrigation and the implementation of low-flow fixtures.
주제 3	<ul style="list-style-type: none"> Location and Transportation: This section of the exam measures the skills of urban planners and covers site selection criteria and alternative transportation strategies. It emphasizes choosing sites that minimize environmental impact and promote sustainable transportation options.
주제 4	<ul style="list-style-type: none"> LEED Process: This section of the exam measures the skills of sustainability consultants and covers the foundational aspects of LEED, including organization fundamentals, the structure of LEED rating systems, and the LEED certification process. It emphasizes understanding the goals and objectives of each credit category and how they contribute to sustainable building practices.

주제 5	<ul style="list-style-type: none"> • Project Surroundings and Public Outreach: This section of the exam measures the skills of community engagement specialists and covers the environmental impacts of buildings, green building codes, and the values of sustainable design. It also includes regional design considerations and public outreach strategies.
주제 6	<ul style="list-style-type: none"> • Sustainable Sites: This section of the exam measures the skills of landscape architects and focuses on on-site assessment and design strategies that reduce environmental impact. It includes topics like habitat conservation, rainwater management, and exterior lighting.
주제 7	<ul style="list-style-type: none"> • Energy and Atmosphere: This section of the exam measures the skills of energy efficiency engineers and covers building loads, energy efficiency measures, and alternative energy practices. It emphasizes commissioning, energy auditing, and the use of renewable energy sources.

시험준비에 가장 좋은 LEED-Green-Associate완벽한 덤프공부자료 공부하기

Fast2test의USGBC LEED-Green-Associate 인증시험덤프는 자주 업데이트 되고, 오래 되고 더 이상 사용 하지 않는 문제들은 바로 삭제해버리며 새로운 최신 문제들을 추가 합니다. 이는 응시자가 확실하고도 빠르게USGBC LEED-Green-Associate덤프를 마스터하고USGBC LEED-Green-Associate시험을 패스할수 있도록 하는 또 하나의 보장입니다. 매력만점USGBC LEED-Green-Associate덤프 강력 추천합니다.

최신 USGBC LEED LEED-Green-Associate 무료샘플문제 (Q235-Q240):

질문 # 235

The Interior space of a six-story commercial building is being completely renovated. Which of the following actions should the design team conduct first in order to incorporate green building strategies?

- A. Set project goals
- B. Benchmark performance of existing building
- C. Measure performance and undergo third party verification
- D. Identify improvement opportunities

정답: A

설명:

Explanation

Setting project goals is the action that the design team should conduct first in order to incorporate green building strategies in a six-story commercial building renovation project. Setting project goals is an important step in the integrative process that defines the vision and expectations for the project's sustainability performance and guides the decision-making throughout the design and construction phases. Setting project goals involves engaging key stakeholders, such as owners, users, designers, contractors, and operators, and identifying measurable objectives, targets, and metrics for various aspects of green building, such as energy efficiency, water conservation, material selection, indoor environmental quality, site selection, and transportation access. The LEED Green Associate Candidate Handbook states that one of the steps in the integrative process is to "establish sustainability goals early in project development" [1, p.

12]. References: LEED Green Associate Candidate Handbook, [Integrative Process | U.S. Green Building Council]

질문 # 236

Waste water from kitchen sinks is considered blackwater unless

- A. it is only used for drip irrigation
- B. a CIR is submitted and approved
- C. it is for use in toilets
- D. local codes state otherwise

정답: D

설명:

Explanation

Blackwater is wastewater that contains fecal matter and pathogens, such as from toilets. Greywater is wastewater that is less contaminated, such as from showers, sinks, and washing machines¹. However, the classification of kitchen sink wastewater may vary depending on local codes and regulations. Some states and authorities consider kitchen sink wastewater as blackwater because it may contain food waste and germs¹²³. Others consider it as greywater if it meets certain quality standards and is used for beneficial purposes, such as irrigation or toilet flushing⁴⁵. A CIR (Credit Interpretation Request) is a process to seek clarification on a specific credit or prerequisite in a LEED rating system, but it does not change the definition of blackwater or greywater.

References:

Greywater Reuse | WaterSense | US EPA⁴

Greywater - California Department of Water Resources⁵

What Is Greywater? What Is Blackwater? | HomeServe USA¹

Grey Water / Reclaimed Water | University of Maryland Extension²

What is meant by the terms Gray water and black water³

Credit Interpretation Requests (CIRs) | U.S. Green Building Council

질문 # 237

A new tenant in an existing office building is pursuing LEED certification. The tenant would like to encourage alternative transportation methods. Which of the following items can be used to satisfy this request and achieve LEED Location and Transportation Credit?

- A. Develop on a brownfield site after remediation
- B. Designate preferred parking for motorcycles
- C. Provide underground parking
- **D. Develop an alternative commuting incentive program**

정답: D

설명:

Explanation

An alternative commuting incentive program is a strategy that can be used to encourage alternative transportation methods, such as public transit, carpooling, biking, or walking. An alternative commuting incentive program can provide benefits or rewards for the employees or tenants who use alternative transportation modes, such as subsidies, vouchers, discounts, prizes, recognition, or preferential parking. This strategy can help to achieve LEED Location and Transportation Credit: Alternative Transportation¹.

질문 # 238

The LEED credits given the greatest weights are credits that

- A. contribute to developmental density and Sustainable Sites
- **B. most directly address the most important environmental impacts and human benefits**
- C. are included in the LEED for Buildings Operations and Maintenance: Existing Buildings rating system
- D. are used in certifying a LEED Platinum Project

정답: B

설명:

LEED credits are weighted based on their potential environmental impacts and human benefits. Those that most directly address these areas are given greater weight in the scoring system. This approach is intended to prioritize actions that have the greatest positive impact on critical environmental issues such as climate change, water resources, biodiversity, air pollution, and human health. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

질문 # 239

Which Is a component of a construction waste management plan?

- A. Distance of the recycling facility from the project site
- **B. List of materials to be diverted from disposal**

- C. Quantity of waste generated from excavated soil
- D. Projected cost savings from diverting waste

정답: B

설명:

A list of materials to be diverted from disposal is a component of a construction waste management plan. A construction waste management plan is a document that outlines the goals, procedures, and responsibilities for diverting construction and demolition waste from landfills or incinerators. A list of materials to be diverted from disposal identifies the types and quantities of materials that can be recycled, reused, salvaged, or donated, as well as the destinations and methods for diversion. The other options are not components of a construction waste management plan. Projected cost savings from diverting waste is a potential benefit of implementing a construction waste management plan, but it is not a required component. Quantity of waste generated from excavated soil is a factor that affects the construction waste generation rate, but it is not a component of a construction waste management plan. Distance of the recycling facility from the project site is a factor that affects the transportation emissions and costs associated with diverting waste, but it is not a component of a construction waste management plan.
