Just come and try!

## **OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q22-Q27):**

### **NEW QUESTION # 22**

The most frequently reported vector-borne illness is:

- A. Tick Paralysis
- **B. Lyme Disease**
- C. Rocky Mountain Spotted Fever

**Answer: B**

Explanation:

Lyme Disease is the most frequently reported vector-borne illness in the U.S., including New Jersey, transmitted by the blacklegged tick. TheGeneral Pest Management: Guide for Commercial Applicators

- Category 7A(Chapter 7: Ticks) highlights its prevalence, with thousands of cases reported annually.

Option A (Rocky Mountain Spotted Fever) is less common. Option B (Tick Paralysis) is rare and not a disease but a condition caused by tick bites.

### **NEW QUESTION # 23**

Control of bedbugs is best achieved through:

- A. A regimen of programmed pesticide application
- B. Use of residual insecticides
- **C. Integrated pest management practices**

**Answer: C**

Explanation:

Bedbug control is most effective using Integrated Pest Management (IPM) practices, which combine multiple methods such as inspection, monitoring, heat treatments, vacuuming, and targeted pesticide use. TheGeneral Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 7:

Bedbugs) emphasizes IPM due to bedbugs' resistance to many pesticides and their ability to hide in cracks and crevices. Option A (programmed pesticide application) is less effective and can lead to resistance. Option C (residual insecticides) is a component of control but not the best standalone method.

### **NEW QUESTION # 24**

Carpenter ants:

- **A. Discard the wood from their galleries**
- B. Feed on the chewed wood from their cavities
- C. Make transportation tubes from the chewed wood

**Answer: A**

Explanation:

Carpenter ants excavate wood to create galleries for nesting but do not feed on it; they discard the wood as sawdust-like frass outside their galleries. TheGeneral Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 7: Ants) notes that this frass is a key sign of carpenter ant activity. Option A (feed on the wood) is incorrect, as they feed on insects and sugary substances.

Option B (make transportation tubes) applies to termites, not carpenter ants.

### **NEW QUESTION # 25**

\_\_\_ flies are easily recognized by their metallic green or blue color.

- A. Bottle or blow
- B. Cluster
- C. House

**Answer: A**

Explanation:

Bottle or blow flies are known for their metallic green or blue color, which distinguishes them from other flies. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Flies) describes these flies as common in structures, often attracted to decaying organic matter. Option A (cluster flies) are dull grayish-brown and often found in attics. Option B (house flies) are gray with black stripes, not metallic.

### **NEW QUESTION # 26**

The cockroach that has two dark bands on the shield directly behind the head is the \_\_\_ cockroach.

- A. American
- B. Oriental
- C. German
- D. Wood

**Answer: C**

Explanation:

The German cockroach is identified by two dark, parallel bands on the pronotum (shield) directly behind its head. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Cockroaches) provides this as a key identifying feature. Option A (Oriental cockroach) is uniformly dark brown or black. Option C (Wood cockroach) is not a common indoor species and lacks these bands. Option D (American cockroach) has a different pattern, often with a yellowish figure-eight marking.

### **NEW QUESTION # 27**

.....

Our Category-7A-General-and-Household-Pest-Control study materials will be very useful for all people to improve their learning efficiency.
