

2026 Valid NSE7_SSE_AD-25 Latest Exam Questions | Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator 100% Free Practice Exam Fee

The "Actual4Exams" is committed to making the entire Fortinet NSE7_SSE_AD-25 exam preparation process instant and successful. To achieve these objectives the "Actual4Exams" is offering real, valid, and updated Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) exam practice test questions in three high in demand formats. These formats are Fortinet NSE7_SSE_AD-25 PDF dumps files, desktop practice test software, and web-based practice test software. All these NSE7_SSE_AD-25 Exam Questions formats contain the real Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) exam practice test questions that assist you in preparation and you will feel confident to pass the final Fortinet NSE7_SSE_AD-25 exam easily.

If you are not certain whether the NSE7_SSE_AD-25 prep guide from our company is suitable for you or not, so you are hesitate to buy and use our study materials. Do not worry, in order to help you solve your problem and let you have a good understanding of our NSE7_SSE_AD-25 study practice dump, the experts and professors from our company have designed the trial version for all people. You can have a try of using the NSE7_SSE_AD-25 Prep Guide from our company before you purchase it. We believe that the trial version provided by our company will help you know about our study materials well and make the good choice for yourself. More importantly, the trial version of the NSE7_SSE_AD-25 exam questions from our company is free for all people. We believe that the trial version will help you a lot.

NSE7_SSE_AD-25 Practice Exam Fee & Reliable NSE7_SSE_AD-25 Study Guide

The passing rate of our NSE7_SSE_AD-25 study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our study materials are selected strictly based on the real NSE7_SSE_AD-25 exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them. We also update frequently to guarantee that the client can get more learning NSE7_SSE_AD-25 resources and follow the trend of the times. So if you use our NSE7_SSE_AD-25 study materials you will pass the NSE7_SSE_AD-25 test with high success probability.

Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q53-Q58):

NEW QUESTION # 53

When deploying FortiSASE agent-based clients, which three features are available compared to an agentless solution? (Choose three.)

- A. Anti-ransomware protection
- B. SSL inspection
- C. Web filter
- D. Vulnerability scan
- E. ZTNA tags

Answer: B,C,D

Explanation:

When deploying FortiSASE agent-based clients, several features are available that are not typically available with an agentless solution. These features enhance the security and management capabilities for endpoints.

* Vulnerability Scan:

* Agent-based clients can perform vulnerability scans on endpoints to identify and remediate security weaknesses.

* This proactive approach helps to ensure that endpoints are secure and compliant with security policies.

* SSL Inspection:

* Agent-based clients can perform SSL inspection to decrypt and inspect encrypted traffic for threats.

* This feature is critical for detecting malicious activities hidden within SSL/TLS encrypted traffic.

* Web Filter:

* Web filtering is a key feature available with agent-based clients, allowing administrators to control and monitor web access.

* This feature helps enforce acceptable use policies and protect users from web-based threats.

References:

FortiOS 7.6 Administration Guide: Explains the features and benefits of deploying agent-based clients.

FortiSASE 23.2 Documentation: Details the differences between agent-based and agentless solutions and the additional features provided by agent-based deployments.

NEW QUESTION # 54

Refer to the exhibits. Jumpbox and Windows-AD are endpoints from the same remote location.

Jumpbox can access the internet through FortiSASE, while Windows-AD can no longer access the internet.

Based on the information in the exhibits, which reason explains the outage on Windows-AD?

Ⓜ

- A. The device posture for Windows-AD has changed.
- B. The remote VPN user on Windows-AD no longer matches any VPN policy.
- C. Windows-AD is excluded from FortiSASE management.
- D. The FortiClient version installed on Windows AD does not match the expected version on FortiSASE.

Answer: A

Explanation:

The Windows-AD endpoint now has both "FortiSASE-Compliant" and "FortiSASE-Non- Compliant" tags due to failing the

antivirus software check. As a result, the Secure Internet Access Policy matches the "Non-Compliant" rule, which is set to Deny, causing the device to lose internet access.

NEW QUESTION # 55

Refer to the exhibits. How will the application vulnerabilities be patched, based on the exhibits provided?

□

- A. An administrator will patch the vulnerability remotely using FortiSASE.
- B. The end user will patch the vulnerabilities using the FortiClient software.
- C. The vulnerability will be patched by installing the patch from the vendor's website.
- D. The vulnerability will be patched automatically based on the endpoint profile configuration.

Answer: A

Explanation:

The "Automatically patch vulnerabilities" option is disabled in the endpoint profile. Additionally, the Vulnerability Dashboard shows the patching status as "Manual patching required." This means an administrator must manually initiate the patching process remotely using FortiSASE.

NEW QUESTION # 56

Refer to the exhibits.

□

A FortiSASE administrator has configured an antivirus profile in the security profile group and applied it to the internet access policy. Remote users are still able to download the eicar.com-zip file from <https://eicar.org>.

Which configuration on FortiSASE is allowing users to perform the download? (Choose one answer)

- A. Deep inspection is not enabled.
- B. Application control is exempting all the browser traffic.
- C. Web filter is allowing the URL.
- D. Intrusion prevention is disabled.

Answer: A

Explanation:

The core of the issue shown in the exhibits is the lack of visibility into encrypted traffic.

* HTTPS Encryption: The eicar.org website uses the HTTPS protocol for its downloads. This means the data payload, including the test malware file, is encrypted as it traverses the network.

* SSL Inspection Modes: As seen in the Security profile group exhibit (image_5705fc.jpg), the SSL inspection mode is explicitly set to Certificate inspection mode.

* Visibility Gap: Certificate inspection only analyzes the initial SSL handshake, such as the server certificate and SNI (Server Name Indication). It does not decrypt the traffic payload. Consequently, the antivirus engine in FortiSASE cannot "see" or scan the eicar.com-zip file hidden within the encrypted session.

* Resolution Requirement: To detect and block malicious files over HTTPS, SSL Deep Inspection must be enabled. Deep inspection allows FortiSASE to act as a proxy, decrypting the traffic for full content scanning by the antivirus and IPS engines before re-encrypting it for the endpoint.

* Log Analysis: While the web filtering logs (image_5704e5.jpg) show the traffic is "Allowed" because the URL is not blocked by a web filter category, this is only the first step of inspection. The antivirus engine is present but ineffective because it is blind to the encrypted content due to the lack of deep inspection.

NEW QUESTION # 57

Which statement about FortiSASE and SAML is true? (Choose one answer)

- A. FortiSASE includes IdP functionality and uses it for SAML group matching.
- B. FortiSASE acts as the IdP and can perform SAML group matching internally.
- C. FortiSASE supports SAML login but cannot use SAML group matching.
- D. FortiSASE acts as the SP, relies on an external IdP, and can use SAML group matching.

Answer: D

Explanation:

FortiSASE utilizes Security Assertion Markup Language (SAML) to provide a seamless Single Sign-On (SSO) experience for remote users connecting to the cloud infrastructure.

* Role Identification: In a SAML exchange, FortiSASE functions as the Service Provider (SP). It relies on an external Identity Provider (IdP)—such as Microsoft Entra ID (formerly Azure AD), Okta, or FortiAuthenticator—to authenticate the user's identity and provide security assertions.²

* SAML Group Matching: One of the core features of the FortiSASE SAML implementation is the ability to perform group matching. During the authentication process, the IdP sends a SAML assertion that typically includes an "Attribute Statement" containing the user's group memberships.³ FortiSASE captures this attribute and matches it against locally defined SAML user groups.

* Policy Enforcement: This group matching capability is critical because it allows administrators to apply different Security Internet Access (SIA) or Secure Private Access (SPA) policies based on the user's role (e.g., "Marketing" vs. "Finance") rather than managing individual users manually.

* Analysis of Incorrect Options: * Options C and D are incorrect because FortiSASE does not natively act as a SAML IdP; it is designed to consume assertions from professional identity management platforms.

* Option B is incorrect because FortiSASE fully supports and relies upon group matching for enterprise-scale policy management.

NEW QUESTION # 58

.....

Only by our NSE7_SSE_AD-25 practice guide you can get maximum reward not only the biggest change of passing the exam efficiently, but mastering useful knowledge of computer exam. So our practice materials are regarded as the great help. Rather than promoting our NSE7_SSE_AD-25 Actual Exam aggressively to exam candidates, we have been dedicated to finishing their perfection and shedding light on frequent-tested NSE7_SSE_AD-25 exam questions.
