Our AWS-Solutions-Architect-Professional study guide provides free trial services, so that you can gain some information about our study contents, topics and how to make full use of the software before purchasing. It's a good way for you to choose what kind of AWS-Solutions-Architect-Professional test prep is suitable and make the right choice to avoid unnecessary waste. Besides, if you have any trouble in the purchasing AWS-Solutions-Architect-Professional practice torrent or trail process, you can contact us immediately and we will provide professional experts to help you online on the AWS-Solutions-Architect-Professional learning materials.

Amazon AWS-Solutions-Architect-Professional (AWS Certified Solutions Architect - Professional) Certification Exam is designed to validate an individual's advanced technical skills and experience in designing and deploying AWS solutions. AWS Certified Solutions Architect - Professional certification is intended for professionals who have already obtained the AWS Certified Solutions Architect - Associate certification and have a minimum of two years of hands-on experience designing and deploying AWS cloud architecture.

The AWS-Solutions-Architect-Professional exam is considered one of the most challenging and valuable certifications in the industry, requiring extensive knowledge of AWS services, best practices, and design patterns. AWS-Solutions-Architect-Professional Exam covers a wide range of topics, including network design, application deployment, data security, disaster recovery, and cost optimization strategies. To pass the exam, candidates must demonstrate their ability to design and implement complex cloud solutions that meet specific business requirements.

What is the duration, language, and format of AWS Solutions Architect Professional Exam

- Type of Questions: Multiple choice (MCQs), multiple answers
- Number of Questions: 65
- Language of Exam: English, Japanese, Korean.
- Duration of Exam: 130 minutes
- No negative marking for wrong answers

Pass AWS-Solutions-Architect-Professional Test - AWS-Solutions-Architect-Professional Latest Exam Materials

According to the survey, the average pass rate of our candidates has reached 99%. High passing rate must be the key factor for

choosing, which is also one of the advantages of our AWS-Solutions-Architect-Professional real study dumps. Once our customers pay successfully, we will check about your email address and other information to avoid any error, and send you the AWS-Solutions-Architect-Professional prep guide in 5-10 minutes, so you can get our AWS-Solutions-Architect-Professional Exam Questions at first time. And then you can start your study after downloading the AWS-Solutions-Architect-Professional exam questions in the email attachments. High efficiency service has won reputation for us among multitude of customers, so choosing our AWS-Solutions-Architect-Professional real study dumps we guarantee that you won't be regret of your decision.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q313-Q318):

NEW QUESTION # 313

A large company runs workloads in VPCs that are deployed across hundreds of AWS accounts. Each VPC consists to public subnets and private subnets that span across multiple Availability Zones. NAT gateways are deployed in the public subnets and allow outbound connectivity to the internet from the private subnets.

A solutions architect is working on a hub-and-spoke design. All private subnets in the spoke VPCs must route traffic to the internet through an egress VPC. The solutions architect already has deployed a NAT gateway in an egress VPC in a central AWS account. Which set of additional steps should the solutions architect take to meet these requirements?

- A. Create an AWS PrivateLink connection between the egress VPC and the spoke VPCs. Configure the required routing to allow access to the internet
- B. Create a transit gateway in every account. Attach the NAT gateway to the transit gateways. Configure the required routing to allow access to the internet.
- C. Create peering connections between the egress VPC and the spoke VPCs. Configure the required routing to allow access to the internet.
- **D. Create a transit gateway, and share it with the existing AWS accounts. Attach existing VPCs to the transit gateway. Configure the required routing to allow access to the internet.**

Answer: D

Explanation:

NEW QUESTION # 314

In regard to DynamoDB, when you create a table with a hash-and-range key.

- A. You must define one or more secondary indexes on that table
- B. You must define one or more Local secondary indexes on that table
- C. You must define one or more Global secondary indexes on that table
- **D. You can optionally define one or more secondary indexes on that table**

Answer: D

Explanation:

Explanation

When you create a table with a hash-and-range key, you can optionally define one or more secondary indexes on that table. A secondary index lets you query the data in the table using an alternate key, in addition to queries against the primary key.

NEW QUESTION # 315

A company's service for video game recommendations has just gone viral. The company has new users from all over the world. The website for the service is hosted on a set of Amazon EC2 instances in an Auto Scaling group behind an Application Load Balancer (ALB). The website consists of static content with different resources being loaded depending on the device type.

Users recently reported that the load time for the website has increased. Administrators are reporting high loads on the EC2 instances that host the service.

Which set of actions should a solutions architect take to improve response times?

- **A. Create separate Auto Scaling groups based on device types. Switch to a Network Load Balancer (NLB). Use the User-Agent HTTP header in the NLB to route to a different set of EC2 instances.**

- B. Move content to Amazon S3 Create an Amazon CloudFront distribution to serve content out of the S3 bucket Use the User-Agent HTTP header to load different content
- C. Move content to Amazon S3 Create an Amazon CloudFront distribution to serve content out of the S3 bucket Use Lambda@Edge to load different resources based on the User-Agent HTTP header
- D. Create a separate ALB for each device type. Create one Auto Scaling group behind each ALB Use Amazon Route 53 to route to different ALBs depending on the User-Agent HTTP header

Answer: A

NEW QUESTION # 316

You have been asked to set up a public website on AWS with the following criteria:

You want the database and the application server running on an Amazon VPC. You want the database to be able to connect to the Internet so that it can be automatically updated to the correct patch level.

You do not want to receive any incoming traffic from the Internet to the database.

Which solutions would be the best to satisfy all the above requirements for your planned public website on AWS? (Choose 2 answers)

- A. Set up both the public website and the database on a public subnet, and block all incoming requests from the Internet with a security group which only allows access from the IP of the public website.
- B. Set up both the public website and the database on a public subnet and block all incoming requests from the Internet with a Network Access Control List (NACL)
- C. Set up both the public website and the database on a private subnet and block all incoming requests from the Internet with a Network Access Control List (NACL). Set up a Security group between the public website and the database which only allows access via port 80.
- D. Set up the public website on a public subnet and set up the database in a private subnet which connects to the Internet via a NAT instance.

Answer: A,D

Explanation:

Explanation

You want the database to be able to connect to the Internet you need to either set it up on a public subnet or set it up on a private subnet which connects to the Internet via a NAT instance

NEW QUESTION # 317

A company wants to send data from its on-premises systems to Amazon S3 buckets. The company created the S3 buckets in three different accounts. The company must send the data privately without the data traveling across the internet. The company has no existing dedicated connectivity to AWS Which combination of steps should a solutions architect take to meet these requirements? (Select TWO.)

- A. Create an Amazon S3 gateway endpoint in the networking account
E. Establish a networking account in the AWS Cloud. Create a private VPC in the networking account Peer VPCs from the accounts that host the S3 buckets with the VPC in the network account
- B. Create an Amazon S3 interface endpoint in the networking account
- C. Establish a networking account in the AWS Cloud Create a private VPC in the networking account Set up an AWS Direct Connect connection with a public VIF between the on-premises environment and the private VPC
- D. Establish a networking account in the AWS Cloud Create a private VPC in the networking account Set up an AWS Direct Connect connection with a private VIF between the on-premises environment and the private VPC

Answer: A,D

NEW QUESTION # 318

.....

Good product and all-round service are the driving forces for a company. Our Company is always striving to develop not only our AWS-Solutions-Architect-Professional latest practice dumps, but also our service because we know they are the acce in the hole to

prolong our career. Reliable service makes it easier to get oriented to the exam. If our candidates fail to pass the AWS-Solutions-Architect-Professional exam unfortunately, you can show us the failed record, and we will give you a full refund. The combination of AWS-Solutions-Architect-Professional Exam Guide and sweet service is a winning combination for our company, so you can totally believe that we are sincerely hope you can pass the AWS-Solutions-Architect-Professional exam, and we will always provide you help and solutions with pleasure, please contact us through email then.
