

API-936 Exam Valid Test Questions & High-quality Latest API-936 Test Sample Pass Success

API 936 Questions -1

1. Which function of refractories is to resist temperature.
a) Primary function
b) Secondary function
c) Tertiary function
d) None of the above.
2. The functions of refractories include resistance to other destructive influences such as abrasion, pressure, chemical attack and or rapid changes in temperature is called.
a) Primary function
b) Secondary function
c) Tertiary function
d) None of the above
3. Refractories means
a) Hard to fuse
b) Hard to test
c) Hart to set
d) None of the above
4. Refractories chemically and physically stable at
a) Low temperatures
b) Average temperatures
c) High temperatures
d) None of the above.
5. In ceramics, the property of resistance to melting, softening or deformation at high temperature is called.
a) Refractoriness
b) Pyrometric cone equivalent
c) Cold crushing strength
d) None of the above.
6. For fire clay and some high alumina materials, the most commonly used index of refractoriness is known as:
a) Refractoriness
b) Pyrometric cone equivalent
c) Refractoriness under load
d) None of the above.

Latest API-936 Test Sample - Reliable API-936 Exam Sims

First and foremost, in order to cater to the different needs of people from different countries in the international market, we have prepared three kinds of versions of our API-936 learning questions in this website. Second, we can assure you that you will get the latest version of our API-936 training materials for free from our company in the whole year after payment on API-936 practice

materials. Last but not least, we will provide the most considerate after sale service for our customers in twenty four hours a day seven days a week on our API-936 exam questions.

API Refractory Personnel Sample Questions (Q56-Q61):

NEW QUESTION # 56

A high alumina mineral usually consists of rounded concretionary grains embedded in clay-like mass and is believed to consist essentially of alumina trihydrate ($\text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}$) and alumina hydrate ($\text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}$) in varying proportions is called

- A. alusite
- **B. bauxite**
- C. fused alumina
- D. kyanite

Answer: B

NEW QUESTION # 57

Packing of chemical setting refractories should have mechanical protection by

- A. Cardboard
- **B. Any of the above.**
- C. Metal outside
- D. Rigid plastic

Answer: B

NEW QUESTION # 58

A metallic anchor, usually V-stud which has a foot-shaped configuration at the base to aid weld attachment to the shell is called.

- **A. Footed anchor**
- B. None of the above
- C. V-anchor
- D. Stud weld

Answer: A

NEW QUESTION # 59

The term that describes the condition of pre-set refractory in which gravitational forces cause it to lose its desired shaped is called

- **A. Slumping**
- B. Bloating
- C. None of the above
- D. Punky

Answer: A

NEW QUESTION # 60

A moldable refractory material that can be extruded and has a level of workability that permits it to be pounded into place to form a monolithic structure

- **A. Plastic refractory**
- B. Monolithic refractory
- C. None of the above
- D. Ramming mix

Answer: A
