

# USE Salesforce Analytics-Admn-201 QUESTIONS TO SPEED UP EXAM PREPARATION [2026]

What's more, part of that TestkingPass Analytics-Admn-201 dumps now are free: <https://drive.google.com/open?id=1JSApvSNbCZWqomLq2RoXMiXOFIwd9Gmt>

Our Analytics-Admn-201 latest preparation materials provide users with three different versions, including a PDF version, a software version, and an online version. Although involved three versions of the Analytics-Admn-201 teaching content is the same, but for all types of users can realize their own needs, whether it is which version of Analytics-Admn-201 Learning Materials, believe that can give the user a better Analytics-Admn-201 learning experience. Below, I would like to introduce you to the main advantages of our research materials, and I'm sure you won't want to miss it.

## Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Migration &amp; Upgrade:</b> This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Administration:</b> This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Connecting to and Preparing Data:</b> This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.</li> </ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>Installation and Configuration:</b> This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Troubleshooting:</b> This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.</li> </ul>

## Analytics-Admn-201 Test Result | Certification Analytics-Admn-201 Exam Dumps

After the advent of the TestkingPass's latest Salesforce certification Analytics-Admn-201 exam practice questions and answers, passing Salesforce certification Analytics-Admn-201 exam is no longer a dream of the IT staff. All of TestkingPass's practice questions and answers about Salesforce Certification Analytics-Admn-201 Exam have high quality and 95% similarity with the real exam questions. TestkingPass is worthful to choose. If you choose TestkingPass's products, you will be well prepared for Salesforce certification Analytics-Admn-201 exam and then successfully pass the exam.

### Salesforce Certified Tableau Server Administrator Sample Questions (Q14-Q19):

#### NEW QUESTION # 14

Which three types of data should you backup to ensure that you can restore a Tableau Server? (Choose three.)

- A. Configuration data
- B. Server secrets and Repository passwords
- C. Topology data
- D. Repository data

**Answer: A,B,D**

Explanation:

Backing up Tableau Server ensures recovery from failures or migrations. A full backup includes multiple data types-let's dissect this comprehensively:

\* Backup Components:

\* Repository Data: PostgreSQL database with metadata (users, permissions, workbooks). Backed up via tsm maintenance backup -f<filename>.tsbak.

\* Configuration Data: Server settings (e.g., ports, authentication) also in the .tsbak file.

\* Server Secrets: Encryption keys, internal tokens, Repository passwords-critical for restoring functionality.

\* Extracts: .hyper files in File Store (optional, separate backup).

\* Option A (Server secrets and Repository passwords): Correct.

\* Details: Includes encryption keys (for extracts), internal tokens (process communication), and Repository credentials. Backed up separately or stored securely (e.g., tsm security export-keys).

\* Why Critical: Without these, restored data may be inaccessible or services may fail.

\* Option C (Configuration data): Correct.

\* Details: Ports, authentication settings, process topology-part of the .tsbak file.

\* Why Critical: Restores server behavior and connectivity post-recovery.

\* Option D (Repository data): Correct.

\* Details: Core metadata database-also in .tsbak.

\* Why Critical: Without it, all content and user data is lost.

\* Option B (Topology data): Incorrect.

\* Details: Topology (process distribution) is part of configuration data in the .tsbak, not a separate entity. It's not distinctly backed

up as "topology data." Why This Matters: A complete backup (secrets, config, repository) ensures full restoration-missing any piece risks an unusable server.

Reference: Tableau Server Documentation - "Back Up Tableau Server Data" ([https://help.tableau.com/current/server/en-us/backup\\_restore.htm](https://help.tableau.com/current/server/en-us/backup_restore.htm)).

### NEW QUESTION # 15

What should you do to disable table recommendations for popular data sources and tables to users?

- A. Use the command: `tsm configuration set -k recommendations.enabled -v false`
- B. Disable the option using the server Settings page
- C. Disable the option using the site Settings page
- D. Publish data sources only to projects with permissions locked to the project

**Answer: C**

Explanation:

Table recommendations in Tableau Server suggest popular tables and data sources to users when they create new content in the web authoring environment. This feature is enabled by default but can be disabled at the site level.

Option A (Disable the option using the site Settings page): Correct. A site administrator can disable table recommendations by navigating to the site's Settings > General page in the Tableau Server web interface and unchecking the option "Enable table recommendations." This prevents users on that site from seeing these suggestions, offering a straightforward UI-based solution.

Option B (Use the command: `tsm configuration set -k recommendations.enabled -v false`): Incorrect. There is no `recommendations.enabled` key in the TSM configuration settings. This feature is managed per site, not server-wide via TSM.

Option C (Publish data sources only to projects with permissions locked): Incorrect. Locking permissions restricts access but doesn't disable the recommendation feature itself. Users with access would still see recommendations.

Option D (Disable the option using the server Settings page): Incorrect. Table recommendations are a site-specific setting, not a server-wide setting. The server Settings page (via TSM) controls global configurations, not this feature.

Reference: Tableau Server Documentation - "Manage Site Settings" ([https://help.tableau.com/current/server/en-us/site\\_settings.htm](https://help.tableau.com/current/server/en-us/site_settings.htm)).

### NEW QUESTION # 16

Which three types of authentications can you use to implement single-sign-on (SSO) authentication to Tableau Server? (Choose three.)

- A. Local Authentication
- B. OpenID Connect
- C. Security Assertion Markup Language (SAML)
- D. Kerberos with Active Directory

**Answer: B,C,D**

Explanation:

Single Sign-On (SSO) allows users to authenticate once (e.g., via a corporate identity provider) and access Tableau Server without re-entering credentials. Tableau Server supports several SSO methods:

\* OpenID Connect (OIDC): An OAuth 2.0-based protocol for SSO, configured via Tableau's SAML settings with an OIDC-compatible IdP (e.g., Google, Okta).

\* Kerberos with Active Directory: A ticket-based SSO protocol, widely used in Windows environments with AD integration.

\* SAML: A flexible SSO standard using XML assertions, supporting various IdPs (e.g., ADFS, PingFederate).

Let's evaluate:

\* Option A (OpenID Connect): Correct. OIDC is an SSO method, implemented as a SAML variant in Tableau Server, enabling seamless login.

\* Option C (Kerberos with Active Directory): Correct. Kerberos provides SSO in AD environments, delegating authentication to the domain controller.

\* Option D (Security Assertion Markup Language - SAML): Correct. SAML is a core SSO method in Tableau, widely adopted for enterprise integrations.

\* Option B (Local Authentication): Incorrect. Local Authentication uses Tableau's internal user database, requiring manual credential entry-no SSO support.

Why This Matters: SSO enhances user experience and security by leveraging existing identity systems, reducing password fatigue.

Reference: Tableau Server Documentation - "Authentication" ([https://help.tableau.com/current/server/en-us/auth\\_overview.htm](https://help.tableau.com/current/server/en-us/auth_overview.htm)).

### NEW QUESTION # 17

You need to ensure that Tableau Server requires the setup of a new administrator account the next time you attempt to log in. What should you do?

- A. Edit tabsvc.yml
- B. Run the tsm register command
- C. Reinstall Tableau Server
- **D. Run the tsm reset command**

**Answer: D**

Explanation:

To force Tableau Server to require the setup of a new administrator account (e.g., resetting the server to an initial setup state), the tsm reset command is the appropriate tool. This command resets Tableau Server's administrative configuration, including the TSM administrator account, while preserving content like workbooks and data sources.

Option B (Run the tsm register command): Correct. Running tsm reset clears the current TSM administrator credentials and configuration settings. The next time you access TSM (e.g., via the web interface or CLI), it prompts you to set up a new administrator account, mimicking the initial setup process. Command: tsm reset -- username <new-username> --password <new-password>.

Option A (Edit tabsvc.yml): Incorrect. The tabsvc.yml file contains service configuration data, but manually editing it is not supported or recommended for resetting the administrator account. It could also corrupt the installation.

Option C (Run the tsm register command): Incorrect. The tsm register command is used to register Tableau Server with a new product key or identity store, not to reset the administrator account.

Option D (Reinstall Tableau Server): Incorrect. Reinstallation wipes the entire server, including content, and is overkill for this task. The tsm reset command achieves the goal without data loss.

Reference: Tableau Server Documentation - "TSM Reset Command" ([https://help.tableau.com/current/server/en-us/cli\\_reset.htm](https://help.tableau.com/current/server/en-us/cli_reset.htm)).

### NEW QUESTION # 18

A user reports that a newly-published workbook runs slowly. What should you ask the user first to investigate the problem?

- A. Did you enable caching on the workbook?
- B. Does the workbook always run slowly or does performance vary?
- **C. Does it run any faster in Tableau Desktop?**
- D. How many times have you opened the workbook in Tableau Server?

**Answer: C**

Explanation:

When a user reports slow performance for a newly-published workbook on Tableau Server, troubleshooting requires isolating the cause-e.g., data source issues, server load, workbook design, or caching. The first question should establish a baseline to narrow the scope. Let's analyze this step-by-step with depth:

\* Performance Context:

\* A workbook's speed depends on:

\* Data Source: Query complexity, size, network latency (e.g., database vs. extract).

\* Workbook Design: Filters, calculations, dashboard complexity.

\* Server Resources: VizQL rendering, Background load, caching.

\* "Newly-published" implies it's not yet optimized or cached on the server.

\* Option A (Does it run any faster in Tableau Desktop?): Correct.

\* Why First: Comparing Desktop vs. Server performance is the most foundational diagnostic step:

\* Desktop Baseline: If it's slow in Desktop (local machine), the issue likely lies in the workbook (e.g., complex queries, large data) or data source (e.g., slow database)-not Server-specific.

\* Server Difference: If it's fast in Desktop but slow on Server, the problem could be server-side (e.g., resource contention, network latency to the data source from Server).

\* Practical Next Steps:

\* Slow in Desktop: Optimize workbook (e.g., simplify calcs, use extracts).

\* Fast in Desktop: Check Server (e.g., caching, VizQL load).

\* Why Critical: Establishes whether the issue is inherent to the workbook/data or introduced by Server-guides all further investigation.

- \* Option B (Does the workbook always run slowly or does performance vary?): Useful but secondary.
  - \* Why Not First: Variability (e.g., slow at peak times) points to server load, but without a Desktop baseline, you can't rule out workbook design. It's a follow-up question after A.
  - \* Detail: Variability might suggest caching or concurrent user impact, but it assumes Server-side causation prematurely.
  - \* Option C (How many times have you opened the workbook in Tableau Server?): Less relevant initially.
  - \* Why Not First: Frequency of access might affect caching (first load is slower, subsequent loads faster), but it's too specific and doesn't isolate Desktop vs. Server. It's a niche follow-up.
  - \* Option D (Did you enable caching on the workbook?): Misleading and incorrect.
  - \* Why Not First: Caching is server-managed (e.g., VizQL cache settings via tsm data-access caching set), not a user-toggle per workbook. Users don't "enable" it-admins do. Plus, it's premature without a baseline.
- Why This Matters: Starting with Desktop performance cuts through assumptions, pinpointing whether the root cause is client-side (workbook/data) or server-side-essential for efficient resolution in production.
- Reference: Tableau Server Documentation - "Troubleshoot Performance" ([https://help.tableau.com/current/server/en-us/troubleshoot\\_performance.htm](https://help.tableau.com/current/server/en-us/troubleshoot_performance.htm)).

## NEW QUESTION # 19

.....

TestkingPass expect to design such an efficient study plan to help you build a high efficient learning attitude for your further development. Our Analytics-Admn-201 study torrent are cater every candidate no matter you are a student or office worker, a green hand or a staff member of many years' experience. Therefore, you have no need to worry about whether you can pass the Analytics-Admn-201 Exam, because we guarantee you to succeed with our technology strength. The language of our Analytics-Admn-201 exam questions are easy to follow and the pass rate of our Analytics-Admn-201 learning guide is as high as 99% to 100%.
