2026 SCA-C01: Tableau Server Certified Associate Exam Newest New Practice Materials

In order to meet the different needs of customers, we have created three versions of our SCA-C01 guide questions. Of course, the content of the three versions is exactly the same, but the displays are the totally different, so you only need to consider which version of our SCA-C01 study braindumps you prefer. Perhaps you can also consult our opinions if you don't know the difference of these

three versions. Or you can free download the demos of the SCA-C01 exam braindumps to check it out.

Tableau Server Certified Associate Exam Sample Questions (Q160-Q165):

NEW QUESTION # 160
When you use trusted tickets in Tableau Server, users can:

- A. Encrypt database connections
- B. Access embedded views without being prompted for credentials
- C. Save and edit workbooks
- D. Embed database credentials

Answer: B

Explanation:
Trusted Ticketsis an authentication method in Tableau Server for embedding views in external applications (e.g., portals) without requiring users to log in manually. Here's how it works:
* A trusted application (e.g., a web server) authenticates with Tableau Server using a trusted IP or username/password.
* Tableau Server issues a temporary ticket (a unique string).
* The ticket is embedded in a view URL (e.g., /trusted/<ticket>/views/...), granting access to the view for a short period (configurable, default 5 minutes).
* Option A (Access embedded views without being prompted for credentials): Correct. Trusted tickets enable SSO-like behavior for embedded content, bypassing the login prompt if the ticket is valid. This is ideal for seamless integration into external systems.
* Option B (Encrypt database connections): Incorrect. Encryption is handled by data source configurations (e.g., SSL), not trusted tickets, which focus on user authentication.
* Option C (Save and edit workbooks): Incorrect. Trusted tickets grant view access, not edit permissions-those depend on the user's site role and permissions.
* Option D (Embed database credentials): Incorrect. Trusted tickets authenticate users to Tableau Server, not databases-database credentials are managed separately in the data source.
Why This Matters: Trusted tickets simplify embedding Tableau content securely in custom applications, enhancing user experience.

NEW QUESTION # 161
If you later decide that you want to disable remote access to the Tableau Server repository, which command should you run?

- A. tsm data-access repository-access close
- B. tsm postgres-repository disable
- C. tsm data-access repository-access disable

Answer: C

Explanation:
Explanation
Link to Tableau Server documentation:
https://help.tableau.com/current/server/en-us/perf_collect_server_repo.htm

NEW QUESTION # 162
What file format should you use to register Tableau Server from the command line?

- A. JSON
- B. XML
- C. YML
- D. HTTP

Answer: A

Explanation:
Registering Tableau Server from the command line involves providing configuration details (e.g., identity store, license) via the tsm register command. Let's explore this fully:
* Registration Process:

* Run during initial setup or to update settings (e.g., after changing AD/LDAP config).
* Uses a configuration file to pass parameters to TSM.
* Command: tsm register --file <path-to-file>.
* File Format:
* Tableau Server uses JSON for configuration files in TSM commands like tsm register.
* Example:
json
CollapseWrapCopy
{
"identityStore": {
"type": "local",
"domain": "example.com"
}
}
* JSON is structured, machine-readable, and aligns with Tableau's modern CLI design.
* Option C (JSON): Correct.
* Official format for tsm register, per documentation and practical use.
* Option A (YML): Incorrect.
* While tabsvc.yml exists internally, it's not for registration-tsm register uses JSON.
* Option B (XML): Incorrect.
* Older Tableau configs used XML (e.g., workgroup.yml pre-TSM), but TSM standardized on JSON.
* Option D (HTTP): Incorrect.
* HTTP is a protocol, not a file format-irrelevant here.
Why This Matters: Correct file format ensures seamless registration, avoiding CLI errors in setup or migrations.

NEW QUESTION # 163
What is the file extension of a Tableau Server backup file generated with the tsm maintenance backup command?

- A. .tsbackconfig
- B. .tsmbackup
- C. .tsback
- D. .tsbak

Answer: D

Explanation:

https://help.tableau.com/current/server-linux/en-us/db_backup.htm

NEW QUESTION # 164
It is common knowledge that users granted the Explorer (Can Publish) site role with an Explorer license can publish workbooks using existing data sources, but cannot connect to external data and create new data sources. What happens if a user with an Explorer license is granted the Server Administrator site role?

- A. A Server Administrator with an Explorer license can now connect to external data and create new data sources
- B. A Server Administrator with an Explorer license still cannot connect to external data and create new data sources
- C. This site role isn't allowed to be assigned to the Explorer license to begin with

Answer: B
