

# 3V0-23.25 Valid Dumps Book - 3V0-23.25 Valid Exam Book

The screenshot shows a webpage with a header 'Valid Dumps HPE6-A73 Book | HPE6-A73 Latest Test Practice'. Below the header is a photograph of a person's hands typing on a laptop. The main text on the page describes the book's content, which includes PC, tablet, and APP versions. It also mentions that the book is useful for IT professionals preparing for the HPE6-A73 exam, which is a prerequisite for the Aruba Certified Switching Professional (ACSP) certification. A red button labeled '>> Valid Dumps HPE6-A73 Book <<' is visible. At the bottom, there is a sub-header 'Valid Dumps HPE6-A73 Book Is Useful to Pass Aruba Certified Switching Professional Exam' and a small note about the online test engine.

With the number of people who take the exam increasing, the 3V0-23.25 exam has become more and more difficult for many people. A growing number of people have had difficulty in preparing for the 3V0-23.25 exam, and they have a tendency to turn to the study materials. However, a lot of people do not know how to choose the suitable study materials. We are willing to recommend the 3V0-23.25 Study Materials from our company to you.

We do gain our high appraisal by our 3V0-23.25 quiz torrent and there is no question that our 3V0-23.25 test prep will be your perfect choice. It is our explicit aim to help you pass it. Our latest 3V0-23.25 exam torrent are perfect paragon in this industry full of elucidating content for exam candidates of various degree to use. Our results of latest 3V0-23.25 Exam Torrent are startlingly amazing, which is more than 98 percent of exam candidates achieved their goal successfully.

## 3V0-23.25 Exam Practice Training Materials - 3V0-23.25 Test Dumps - PassExamDumps

We give priority to the relationship between us and users of the 3V0-23.25 preparation materials, as a result of this we are dedicated to create a reliable and secure software system not only in payment on 3V0-23.25 training quiz the but also in their privacy. So we have the responsibility to delete your information and avoid the leakage of your information about purchasing 3V0-

## VMware Advanced VMware Cloud Foundation 9.0 Storage Sample Questions (Q175-Q180):

### NEW QUESTION # 175

A cache drive failed on one of the vSAN OSA nodes in the cluster.

When the drive failed, vSAN started a resync to ensure the health of the data, and all objects are showing a healthy and compliant state.

The vSAN administrator needs to replace the failed cache drive.

Which set of steps should the vSAN administrator take?

- A. Remove the existing vSAN disk group, and physically replace the device. Then, check to verify that the ESX host automatically detects the new device. Afterwards, manually recreate the Disk Group.
- B. Place the disk group into maintenance mode, and select Full Data Migration. Then, physically replace the failed cache device. Afterwards, vSAN will rebuild the disk group automatically.
- C. Physically replace the failed cache device, and vSAN will automatically allocate the storage.
- D. Physically replace the failed cache device, and vSAN will automatically create a new disk group. Then, remove the disk group with the failed device.

**Answer: A**

Explanation:

In vSAN Original Storage Architecture, a disk group consists of one flash cache device and one or more capacity devices. The cache device is a required component of the disk group, so a failed cache device cannot be replaced as an isolated drive while preserving the same disk group. The supported operational approach is to remove the affected disk group, physically replace the failed cache device, verify that ESX detects the new device, and then manually recreate the disk group using the replacement cache device and the appropriate capacity devices. The scenario states that vSAN has already completed resynchronization and that all objects are healthy and compliant, so removing the failed disk group no longer risks object noncompliance. Selecting Full Data Migration on a failed cache device is not the correct workflow because the cache failure affects the entire disk group. Simply inserting a replacement drive does not cause vSAN OSA to automatically rebuild the disk group.

Reference topics: vSAN OSA Disk Groups, Replace a Cache Device, Remove Disk Group, Recreate Disk Group.

### NEW QUESTION # 176

A CTO mandates that the IT team reduce storage capacity consumption on a vSAN cluster to delay a hardware procurement cycle. The storage administrators propose adjusting the Object Repair Timer (CLOM repair delay) and modifying the standard Storage Policy rules to aggressively reclaim space.

...

[Storage Policy Rule View - Proposed Changes]

Policy: DB-Prod-Policy (Proposed)

Failures to Tolerate: 0 (No Redundancy)

Object Space Reservation: 0%

Advanced Setting Target:

CLOM Repair Delay: 15 minutes

...

Which of the following statements accurately evaluate the trade-offs and interactions associated with these aggressive policy choices? (Select all that apply.)

- A. Lowering the CLOM Repair Delay to 15 minutes reduces the time a component sits in the "Absent" state, forcing vSAN to consume more CPU and network bandwidth for resyncs on shorter outages.
- B. Setting FTT=0 (No Redundancy) means any host failure will instantly cause the objects to become "Inaccessible" with no CLOM repair delay applied.
- C. A 15-minute CLOM timer is highly inefficient for environments with routine host patch cycles, as hosts often take 20-30 minutes to reboot.
- D. The combination of FTT=0 and a 15-minute CLOM repair delay will cause vSAN to automatically rebuild data from backup snapshots when a host fails.

**Answer: A,B,C**

### NEW QUESTION # 177

Which component manages storage lifecycle in VMware Cloud Foundation?

- A. NSX Manager
- **B. SDDC Manager**
- C. vCenter Server
- D. ESXi

**Answer: B**

### NEW QUESTION # 178

A Network Administrator is auditing the storage configuration for a VCF 9.0 environment. The environment contains a vSAN ESA cluster and a cluster of traditional ESXi hosts connected to legacy Fibre Channel LUNs.

The administrator discovers a critical anti-pattern while running an API query against the Storage DRS configurations using Ruby vSphere Console (RVC).

```
...
[RVC Output: vsan.cluster_info / WLD-All-Compute]
+-----+-----+-----+-----+
+-----+
| Datastore Name | Type | SDRS Enabled | Automation Level |
+-----+-----+-----+-----+
+-----+
| vsanDatastore-ESA-01 | vSAN ESA | True | Fully Automated |
| FC-LUN-01 | VMFS-6 | True | Fully Automated |
| FC-LUN-02 | VMFS-6 | True | Fully Automated |
+-----+-----+-----+-----+
+-----+
...

```

Which TWO architectural statements describe the violations and necessary remediation for this specific Datastore Cluster configuration? (Choose 2.)

- A. The "Fully Automated" setting on the FC LUNs violates the vSAN ESA requirement for strict physical switch traffic isolation.
- B. Storage DRS can include the vSAN datastore only if the "I/O Metric Inclusion" threshold is disabled, as vSAN does not expose DAVG metrics.
- **C. The vSAN datastore must be removed from the Datastore Cluster, as mixing vSAN and VMFS in the same SDRS cluster will cause severe metadata corruption.**
- **D. Storage DRS is explicitly unsupported on vSAN Datastores; vSAN uses its own internal Distributed Object Manager (DOM) to balance capacity and I/O.**

**Answer: C,D**

### NEW QUESTION # 179

An Infrastructure Manager imports a configuration from the vSAN Sizer tool to deploy a new 4- node vSAN cluster in SDDC Manager. The Sizer projected that the cluster would have 40 TB of usable capacity after FTT=1 (RAID-1) mirroring. However, immediately after SDDC Manager provisions the cluster, the capacity view shows significantly less available space for actual virtual machines than projected.

```
...
[SDDC Manager - vSAN Capacity View (Post-Deployment)]
Total Raw Capacity: 80.0 TB
Total Usable (RAID-1): 40.0 TB
Operations Reserve (Slack): 4.0 TB
Host Rebuild Reserve: 10.0 TB
Free Space for VMs: 26.0 TB
...

```

Which TWO factors explain the discrepancy between the "Sizer Projected Usable Space" and the actual "Free Space for VMs" available post-deployment? (Choose 2.)

- **A. The Operations Reserve (Slack Space) is explicitly fenced off to accommodate transient capacity needs for VM**

snapshots, vMotion, and component merges.

- B. The Sizer tool assumes thin provisioning, but SDDC Manager defaults to thick provisioning for the management virtual machines.
- C. The Host Rebuild Reserve (10.0 TB) is actively withheld by vSAN to ensure the cluster can auto-rebuild if one of the four hosts fails permanently.
- D. The 40 TB projection assumed RAID-5, but SDDC Manager forcibly applied RAID-1, halving the capacity.

Answer: A,C

## NEW QUESTION # 180

.....

The valid updated, and real VMware 3V0-23.25 PDF questions and both practice test software are ready to download. Just take the best decision of your professional career and get registered in the VMware 3V0-23.25 Certification Exam and start this journey with PassExamDumps 3V0-23.25 exam PDF dumps and practice test software.

**3V0-23.25 Valid Exam Book:** <https://www.passexamdumps.com/3V0-23.25-valid-exam-dumps.html>

VMware 3V0-23.25 Valid Dumps Book More than ever, the professionals are now facing a highly competitive world to get their talent recognized enhancing their positions in their work environment, Non-Refundable A PassExamDumps 3V0-23.25 Valid Exam Book User can claim a refund if he fails the exam within 15 days of purchase of the product, VMware 3V0-23.25 Valid Dumps Book We are 7/24 online service support.

Then, as you move the mouse, you will see the control change size, 3V0-23.25 Test Centres Each option is designed for you to select each option in turn and be guided" through the process of creating your new project.
