encounter any problems in the process of purchasing or using C-SEC-2405 Study Guide you can contact our customer service by e-mail or online at any time, we will provide you with professional help.

## SAP Certified Associate - Security Administrator Sample Questions (Q59-Q64):

### NEW QUESTION # 59

Which of the following rules does SAP recommend you consider when you define a role-naming convention for an SAP S/4HANA on-premise system? Note: There are 3 correct answers to this question.

- A. Role names must NOT start with "SAP"
- B. Role names can be no longer than 30 characters
- C. Role names are system language-independent
- D. Role names are system language-dependent
- E. Role names can be no longer than 20 characters

**Answer: A,B,C**

Explanation:

When defining a role-naming convention in an SAP S/4HANA on-premise system, SAP recommends the following rules:

- \* Role Names Must NOT Start with "SAP" (A):
- \* The prefix "SAP" is reserved for standard roles delivered by SAP.
- \* Custom roles should use a different prefix to avoid confusion and potential conflicts during upgrades or support packages.
- \* Role Names Are System Language-Independent (B):
- \* Role names should be consistent across different language settings.
- \* Using language-independent names ensures that roles are easily identifiable and maintainable regardless of the system's logon language.
- \* Role Names Can Be No Longer Than 30 Characters (E):
- \* The maximum length for role names is 30 characters.
- \* Keeping within this limit ensures compatibility with SAP standards and avoids issues in role assignment and maintenance.

### NEW QUESTION # 60

Which authorization objects can be used to restrict access to SAP Enterprise Search models in the SAP Fiori launchpad? Note: There are 2 correct answers to this question.

- A. RSDDLTP
- B. SDDLVIEW
- C. S\_ESH\_CONN
- D. S\_ESH\_ADM

**Answer: C,D**

### NEW QUESTION # 61

What authorization object can be used to authorize an administrator to create specific authorizations in roles?

- A. S\_USER\_TCD
- B. S\_USER\_VAL
- C. S\_USER\_AGR
- D. S\_USER\_AUT

**Answer: D**

Explanation:

The authorization object S\_USER\_AUT is used to authorize an administrator to create specific authorizations in roles within SAP systems. This object controls access to authorization maintenance tasks, such as defining and modifying authorization objects and

values in transaction PFCG. By assigning S\_USER\_AUT with appropriate values, administrators can be granted permissions to create or change authorizations within roles, ensuring that only authorized personnel can define access rights. This is critical for maintaining security and segregation of duties in role management. S\_USER\_VAL is used for maintaining authorization values, S\_USER\_TCD controls access to specific transactions, and S\_USER\_AGR manages role assignments, none of which directly address creating authorizations. S\_USER\_AUT's role in authorization maintenance ensures that administrators can securely configure roles while adhering to organizational security policies, preventing unauthorized changes to access controls and supporting compliance with audit requirements in SAP environments.

#### NEW QUESTION # 62

Which archiving objects are relevant for archiving change documents for user master records? Note: There are 2 correct answers to this question.

- A. US\_PROF
- B. US\_AUTH
- C. US\_PASS
- D. US\_USER

**Answer: B,D**

#### NEW QUESTION # 63

What authorization object can be used to authorize an administrator to create specific authorizations in roles?

- A. S\_USER\_TCD
- B. S\_USER\_VAL
- C. S\_USER\_AGR
- D. S\_USER\_AUT

**Answer: D**

Explanation:

The S\_USER\_AUT authorization object allows administrators to create or modify specific authorizations within roles. This ensures granular control over what authorizations an administrator can define, maintaining adherence to security policies.

Key Fields in S\_USER\_AUT:

- \* ACTVT (Activity): Determines if the administrator can create, change, or display authorizations.
- \* AUTH (Authorization): Specifies the exact authorizations that can be created or modified.
