The Certified Wireless Security Professional (CWSP) (CWSP-208) questions is currently in use by many customers, and they are preparing for the test effectively. The applicants who used it previously to prepare for the CWSP-208 certification exam have rated our CWSP-208 Dumps as one of the best. Our customers receive Certified Wireless Security Professional (CWSP) (CWSP-208) questions updates for up to 365 days after their purchase.

You will be able to apply for high-paying jobs in top companies worldwide after passing the CWNP CWSP-208 test. The CWNP CWSP-208 Exam provides many benefits such as higher pay, promotions, resume enhancement, and skill development.

Test CWSP-208 Prep & CWSP-208 Downloadable PDF

This Certified Wireless Security Professional (CWSP) (CWSP-208) software has a simple-to-use interface. By using the CWSP-208 practice exam software, you can evaluate your mistakes at the end of every take and overcome them. Our software helps you

to get familiar with the format of the original CWSP-208 test. Software lets you customize your CWNP CWSP-208 Practice Exam's duration and question numbers as per your practice needs. You just need an active internet connection to confirm the license of your product. All Windows-based computers support this CWSP-208 practice exam software.

CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q94-Q99):

NEW QUESTION # 94

When using a tunneled EAP type, such as PEAP, what component is protected inside the TLS tunnel so that it is not sent in clear text across the wireless medium?

- A. Server credentials
- B. RADIUS shared secret
- C. User credentials
- D. X.509 certificates

Answer: C

Explanation:

In tunneled EAP types (e.g., PEAP, EAP-TTLS):

A secure TLS tunnel is first established using the server's certificate.

Then, user credentials (e.g., username/password) are sent through the encrypted tunnel to ensure confidentiality.

Incorrect:

A). Certificates are exchanged during tunnel establishment, not protected within it.

C). Server credentials are used to establish the tunnel, not protected inside it.

D). The RADIUS shared secret secures communication between AP/controller and RADIUS server-not sent via the tunnel.

NEW QUESTION # 95

The following numbered items show some of the contents of each of the four frames exchanged during the 4-way handshake:

1. Encrypted GTK sent
2. Confirmation of temporal key installation
3. Anonce sent from authenticator to supplicant
4. Snonce sent from supplicant to authenticator, MIC included

Arrange the frames in the correct sequence beginning with the start of the 4-way handshake.

- A. 4, 3, 1, 2
- B. 3, 4, 1, 2
- C. 1, 2, 3, 4
- D. 2, 3, 4, 1

Answer: B

Explanation:

The correct sequence of the 4-Way Handshake frames in WPA/WPA2 is:

Message 1: Authenticator sends ANonce to the supplicant # (3)

Message 2: Supplicant sends SNonce and a MIC to the authenticator # (4)

Message 3: Authenticator sends GTK and confirms keys with MIC # (1)

Message 4: Supplicant confirms installation of PTK/GTK # (2) This process ensures mutual key confirmation and integrity before data traffic begins.

NEW QUESTION # 96

The IEEE 802.11 standard defined Open System authentication as consisting of two auth frames and two assoc frames. In a WPA2-Enterprise network, what process immediately follows the 802.11 association procedure?

- A. DHCP Discovery
- B. RADIUS shared secret lookup

- C. 4-Way Handshake
- D. Passphrase-to-PSK mapping
- E. 802.1X/EAP authentication
- F. Group Key Handshake

Answer: E

Explanation:

In WPA2-Enterprise:

After successful Open System authentication and 802.11 association, the next step is 802.1X/EAP authentication via EAPOL frames.

This phase establishes user identity and derives the PMK.

Incorrect:

- A). Group Key Handshake comes after the 4-Way Handshake.
- C). DHCP occurs after authentication and key negotiation.
- D). 4-Way Handshake follows successful 802.1X authentication.
- E). PSK mapping applies to WPA2-Personal, not Enterprise.
- F). The RADIUS shared secret is pre-configured between authenticator and RADIUS server-not part of real-time negotiation.

NEW QUESTION # 97

Given: You are using a Wireless Aggregator utility to combine multiple packet captures. One capture exists for each of channels 1, 6 and 11. What kind of troubleshooting are you likely performing with such a tool?

- A. Interference source location.
- B. Wireless adapter failure analysis.
- C. Fast secure roaming problems.
- D. Narrowband DoS attack detection.

Answer: C

Explanation:

When using a wireless aggregator to combine packet captures from channels 1, 6, and 11 (the three non-overlapping 2.4 GHz channels), you're most likely analyzing multi-channel behavior. This is particularly relevant when troubleshooting roaming issues, such as fast secure roaming (e.g., 802.11r). These captures help determine whether authentication or association events occur smoothly across APs operating on different channels.

Incorrect:

- A). Adapter failure doesn't require multi-channel capture.
- B). Interference location is typically single-channel and spectrum-analysis focused.
- D). Narrowband DoS attacks are also usually identified using RF spectrum analysis, not packet capture across all channels.

NEW QUESTION # 98

Role-Based Access Control (RBAC) allows a WLAN administrator to perform what network function?

- A. Allow access to specific files and applications based on the user's WMM access category.
- B. Allow simultaneous support for multiple EAP types on a single access point.
- C. Minimize traffic load on an AP by requiring mandatory admission control for use of the Voice access category.
- D. Provide two or more user groups connected to the same SSID with different levels of network privileges.

Answer: D

Explanation:

RBAC enables dynamic assignment of different access privileges (e.g., VLAN, ACLs, bandwidth) to users even when they connect through the same SSID. This simplifies SSID management while maintaining fine-grained access control.

Incorrect:

- A). Admission control is a QoS/WMM function, not RBAC.
- B). Access category (AC) affects frame prioritization, not file/app access.
- D). Multiple EAP types are supported in authentication servers-not directly tied to RBAC.

NEW QUESTION # 99

.....

God always helps those who help themselves. It is impossible to make great fortune overnight. Enough preparation and efforts are needed when you come across an opportunity. So we suggest that you learn our CWSP-208 latest training material, which can help broaden your knowledge. Nowadays, lifelong learning has got wide attention. The much knowledge you learn, the better chance you will have. Our CWSP-208 practice material suits you best. You can elevate your ability in a short time. Then you can apply what you have learned on our CWSP-208 test engine into practice. We warmly welcome you to purchase our study guide.
