Salesforce Plat-Arch-201 Latest Exam Book & Plat-Arch-201 Latest Dumps Sheet

Up to now, there are three versions of Plat-Arch-201 exam materials for your choice. So high-quality contents and flexible choices of Plat-Arch-201 learning mode will bring about the excellent learning experience for you. Though the content of these three versions of our Plat-Arch-201 study questions is the same, their displays are totally different. And you can be surprised to find that our Plat-Arch-201 learning quiz is developed with the latest technologies as well.

Salesforce Certified Platform Data Architect Sample Questions (Q152-Q157):

NEW QUESTION # 152

Cloud Kicks is launching a Partner Community, which will allow users to register shipment requests that are then processed by Cloud Kicks employees. Shipment requests contain header information, and then a list of no more than 5 items being shipped. First, Cloud Kicks will introduce its community to 6,000 customers in North America, and then to 24,000 customers worldwide within the next two years. Cloud Kicks expects 12 shipment requests per week per customer, on average, and wants customers to be able to view up to three years of shipment requests and use Salesforce reports. What is the recommended solution for the Cloud Kicks Data Architect to address the requirements?

- A. Create an external custom object to track shipment requests and a child external object to track shipment items. External objects are stored off-platform in Heroku's Postgres database.
- B. Create an external custom object to track shipment requests with five lookup custom fields for each item being shipped. External objects are stored off-platform in Heroku's Postgres database.
- C. Create a custom object to track shipment requests with five lookup custom fields for each item being shipped. Implement an archiving process that moves data off-platform after three years.
- D. Create a custom object to track shipment requests and a child custom object to track shipment items. Implement an archiving process that moves data off-platform after three years.

Answer: D

Explanation:

The recommended solution for the Cloud Kicks Data Architect to address the requirements is to create a custom object to track shipment requests and a child custom object to track shipment items. Implement an archiving process that moves data off-platform after three years. This solution would allow Cloud Kicks to store and manage their shipment data on Salesforce, and use Salesforce reports to analyze it. However, since Cloud Kicks expects a large volume of data over time, they should implement an archiving process that moves data off-platform after three years to avoid hitting the Org data storage limit and maintain optimal performance. External objects are not a good option for this scenario, because they are stored off-platform in an external system, such as Heroku's Postgres database, and they have limited functionality and performance compared to custom objects

NEW QUESTION # 153

How can an architect find information about who is creating, changing, or deleting certain fields within the past two months?

- A. Create a field history report for the fields in question.
- **B. Export the setup audit trail and find the fields in question.**
- C. Remove "customize application" permissions from everyone else.
- D. Export the metadata and search it for the fields in question.

Answer: B

Explanation:

The setup audit trail tracks changes made in your org's setup area for the past 180 days. You can export the setup audit trail and find the fields in question by filtering by action type, user, or date.

NEW QUESTION # 154

Universal Containers (UC) needs to run monthly and yearly reports on opportunities and orders for sales reporting. There are 5 million opportunities and 10 million orders. Sales users are complaining that the report will regularly timeout. What is the fastest and most effective way for a data architect to solve the time-out issue?

- A. Extract opportunity and order data from Salesforce, and use a third-party reporting tool to run reports outside of Salesforce.
- B. Create a skinny table in Salesforce, and copy order and opportunity fields into the skinny table and create the required reports on It.
- **C. Create an aggregate custom object that summarizes the monthly and yearly values into the required format for the required reports.**
- D. Create custom fields on opportunity, and copy data from order into those custom fields and run all reports on Opportunity object.

Answer: C

Explanation:

Creating an aggregate custom object that summarizes the monthly and yearly values into the required format for the required reports (option D) is the fastest and most effective way for a data architect to solve the time-out issue, as it reduces the amount of data that needs to be queried and processed by the reports.

NEW QUESTION # 155

A consumer products company has decided to use Salesforce for its contact center. The contact center agents need access to the following information in Service Console when a customer contacts them:

1. Customer browsing activity on its website stored on its on premise system
2. Customer interactions with sales associates at its retail stores maintained in Salesforce
3. Contact center interactions maintained in Salesforce
4. Email campaign activity to customer from its marketing systems.

What should a data architect do to fulfill these requirements with minimum development effort in Salesforce?

- A. Create web tabs in Service Console to show website and marketing activities.
- **B. Build customer view in Service Console with components that show website data and marketing data as mashup.**
- C. Use Salesforce Connect to integrate the website and the marketing system into Service Console using external objects.

- D. Build custom components in Service Console to bring information from the marketing and website information.

Answer: B

Explanation:

Building a customer view in Service Console with components that show website data and marketing data as mashup is the best option to fulfill the requirement with minimum development effort in Salesforce. A mashup is a technique that combines data from different sources into a single user interface. You can use Visualforce pages or Lightning components to create mashups that display data from external systems such as your website and marketing system. This way, you can provide your contact center agents with a comprehensive view of the customer information they need.

NEW QUESTION # 156

Cloud Kicks has the following requirements:

- Data needs to be sent from Salesforce to an external system to generate invoices from their Order Management System (OMS).
- A Salesforce administrator must be able to customize which fields will be sent to the external system without changing code.

What are two approaches for fulfilling these requirements? (Choose two.)

- A. Enable the field-level security permissions for the fields to send.
- B. A set<objectFieldset> to determine which fields to send in an HTTP callout.
- C. An Outbound Message to determine which fields to send to the OMS.
- D. A Field Set that determines which fields to send in an HTTP callout.

Answer: C,D

Explanation:

An Outbound Message is a native Salesforce feature that allows sending data to an external system without code. It can be configured to include any fields from the source object. A Field Set is a collection of fields that can be used in Visualforce pages or Apex classes to dynamically determine the fields to send in an HTTP callout. Both of these approaches meet the requirements of Cloud Kicks.

NEW QUESTION # 157

.....

We hope that you can use your time as much as possible for learning on the Plat-Arch-201 practice questions. So we have considered every detail of the Plat-Arch-201 study guide to remove all unnecessary programs. If you try to download our Plat-Arch-201 study materials, you will find that they are so efficient! And even you free download the demos on the website, you can feel the convenience and efficiency. It is simple and easy to study with our Plat-Arch-201 learning braindumps.

Plat-Arch-201 Latest Exam Book: <https://www.validtorrent.com/Plat-Arch-201-valid-exam-torrent.html>

If you want to pass it successfully please choose our Plat-Arch-201 exam cram pdf, Training materials in the ValidTorrent Plat-Arch-201 Latest Exam Book are the best training materials for the candidates, So it is very important for a lot of people to gain the Plat-Arch-201 certification, ValidTorrent Plat-Arch-201 exam PDF is that the latest and valid, In order to strengthen your confidence for Plat-Arch-201 exam braindumps, we are pass guarantee and money back guarantee.

Our Plat-Arch-201 quiz torrent materials are time-tested products with high quality and efficient contents for your using experience, Complete answers are provided for all exercises, Plat-Arch-201 except research problems, making the book particularly valuable for self-study.

Verified and Updated Salesforce Plat-Arch-201 Exam Questions & Answers

If you want to pass it successfully please choose our Plat-Arch-201 exam cram pdf, Training materials in the ValidTorrent are the best training materials for the candidates.

So it is very important for a lot of people to gain the Plat-Arch-201 certification, ValidTorrent Plat-Arch-201 exam PDF is that the latest and valid, In order to strengthen your confidence for Plat-Arch-201 exam braindumps, we are pass guarantee and money back guarantee.
