Ihr Gehalt wird erhöht und Sie werden sicher befördert.

ISACA Certified Information Security Manager CISM Prüfungsfragen mit Lösungen (Q753-Q758):

753. Frage

With limited resources in the information security department, which of the following is the BEST approach for managing security risk?

- **A. Prioritize security activities and report to management.**
- B. Implement technical solutions to automate security management activities.
- C. Hire additional information security staff.
- D. Engage a third-party company to provide security support.

Antwort: A

754. Frage

The chief information security officer (CISO) has developed an information security strategy, but is struggling to obtain senior management commitment for funds to implement the strategy.

Which of the following is the MOST likely reason?

- **A. There was a lack of engagement with the business during development.**
- B. The CISO reports to the CIO.
- C. The strategy does not include a cost-benefit analysis.
- D. The strategy does not comply with security standards.

Antwort: A

Begründung:

To address this issue, the CISO should work on enhancing business engagement, involving key stakeholders in the strategy's development, and clearly demonstrating how the security strategy aligns with and supports the organization's business objectives and risk mitigation.

755. Frage

Which of the following BEST enables the integration of information security governance into corporate governance?

- A. Senior management approval of the information security strategy
- **B. An information security steering committee with business representation**
- C. Well-documented information security policies and standards
- D. Clear lines of authority across the organization

Antwort: B

Begründung:

= The best way to enable the integration of information security governance into corporate governance is to establish an information security steering committee with business representation. An information security steering committee is a group of senior executives and managers from different business units and functions who are responsible for overseeing, directing, and supporting the information security program and strategy of the organization. An information security steering committee with business representation can enable the integration of information security governance into corporate governance by providing the following benefits¹²:

* Align the information security objectives and priorities with the business objectives and priorities, and ensure that the information security program and strategy support and enable the achievement of the organizational goals and performance.

* Communicate and promote the value and importance of information security to the board of directors, senior management, and other stakeholders, and ensure that information security is considered and incorporated in the decision making and planning processes of the organization.

* Provide guidance and direction to the information security manager and the information security team, and ensure that they have the necessary authority, resources, and support to implement and maintain the information security program and strategy effectively and efficiently.

* Monitor and evaluate the performance and outcomes of the information security program and strategy, and ensure that they are aligned with the expectations and requirements of the organization and its stakeholders, as well as the relevant laws, regulations, standards, and best practices.

* Identify and address the issues, challenges, and opportunities related to information security, and ensure that the information security program and strategy are continuously improved and updated to reflect the changes and developments in the internal and external environment.

The other options are not the best way to enable the integration of information security governance into corporate governance, as they are less comprehensive, effective, or influential than establishing an information security steering committee with business representation. Well-documented information security policies and standards are important components of the information security program and strategy, but they are not sufficient to enable the integration of information security governance into corporate governance, as they may not reflect or align with the business needs, priorities, or expectations, and they may not be communicated, implemented, or enforced properly or consistently across the organization. Clear lines of authority across the organization are important factors for the information security governance structure, but they are not sufficient to enable the integration of information security governance into corporate governance, as they may not ensure the involvement, participation, or support of the senior executives, managers, and other stakeholders who are responsible for or affected by information security. Senior management approval of the information security strategy is an important outcome of the information security governance process, but it is not sufficient to enable the integration of information security governance into corporate governance, as it may not ensure the alignment, communication, or monitoring of the information security strategy with the business strategy, and it may not ensure the accountability, responsibility, or authority of the information security manager and the information security team¹. 756. Frage

What would a security manager PRIMARILY utilize when proposing the implementation of a security solution?

- A. Technical evaluation report
- **B. Business case**
- C. Budgetary requirements
- D. Risk assessment report

Antwort: B

Begründung:

The information security manager needs to prioritize the controls based on risk management and the requirements of the organization. The information security manager must look at the costs of the various controls and compare them against the benefit the organization will receive from the security solution. The information security manager needs to have knowledge of the development of business cases to illustrate the costs and benefits of the various controls. All other choices are supplemental.

757. Frage

Which of the following are seldom changed in response to technological changes?

- A. Procedures
- B. Standards
- C. Guidelines
- **D. Policies**

Antwort: D

Begründung:

Explanation

Policies are high-level statements of objectives. Because of their high-level nature and statement of broad operating principles, they are less subject to periodic change. Security standards and procedures as well as guidelines must be revised and updated based on the impact of technology changes.
