

NCP-DB-6.10 Valid Exam Voucher | Dowanload in Dumpexams | 100% Pass

Why **DumpsPlanet** is No.1 Choice?

- Provide Real Questions According to Exam Topics & Pattern
- Possess A Pool of Satisfied Customers Whom Get Brilliant Results
- Have a Excellent Team of Experts Ready to Serve You 24/7

Download Free Demo & Get Full Version For 100% Guaranteed Results

DOWNLOAD Safe & Secure Payment Methods PayPal MasterCard Maestro VISA

All of our considerate designs have a strong practicability. We are still researching on adding more useful buttons on our NCP-DB-6.10 test answers. The aim of our design is to improve your learning and all of the functions of our products are completely real. Then the learning plan of the NCP-DB-6.10 exam torrent can be arranged reasonably. The scores are calculated by every question of the NCP-DB-6.10 Exam guides you have done. So the final results will display how many questions you have answered correctly and mistakenly. You even can directly know the score of every question, which is convenient for you to know the current learning condition.

You can now get Nutanix NCP-DB-6.10 exam certification our Dumpexams have the full version of Nutanix NCP-DB-6.10 exam. You do not need to look around for the latest Nutanix NCP-DB-6.10 training materials, because you have to find the best Nutanix NCP-DB-6.10 Training Materials. Rest assured that our questions and answers, you will be completely ready for the Nutanix NCP-DB-6.10 certification exam.

Valid NCP-DB-6.10 Valid Exam Voucher Supply you Latest-updated Braindump Pdf for NCP-DB-6.10: Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 to Study easily

These days the Dumpexams is providing you online Nutanix NCP-DB-6.10 exam questions to crack the Nutanix NCP-DB-6.10 certification exam which means you don't need to be physically present anywhere except the chair at your home. You need a laptop and an active internet connection to access the Dumpexams Nutanix NCP-DB-6.10 Exam Questions and practice exam.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q33-Q38):

NEW QUESTION # 33

An administrator is looking to provision a relational database management system (RDBMS) in an HA instance. Which two database engines are supported with NDB? (Choose two.)

- A. MongoDB
- B. MariaDB
- C. PostgreSGL
- D. Oracle

Answer: C,D

Explanation:

Nutanix Database Service (NDB) supports high availability (HA) instances for certain relational database management systems (RDBMS). Among the listed options, NDB natively supports Oracle and PostgreSQL for HA configurations, enabling features like

replication and failover.

These databases are well-integrated with NDB's Time Machine and HA frameworks.

NEW QUESTION # 34

An administrator enables NDB Multi-Cluster on Cluster A. Cluster B is then registered with NDB. What are the different NDB Service VMs present in each Nutanix cluster?

- A. Cluster A: 1 NDB Server
Cluster B: 1 NDB Agent
- B. Cluster A: 1 NDB Agent
Cluster B: 1 NDB Server, 1 NDB Agent
- C. Cluster A: 1 NDB Agent
Cluster B: 1 NDB Server
- D. Cluster A: 1 NDB Server, 1 NDB Agent
Cluster B: 1 NDB Agent

Answer: D

Explanation:

NDB Multi-Cluster is a feature that allows multiple Nutanix clusters to share a common NDB service for database management and automation. NDB service consists of two components:

NDB Server and NDB Agent. NDB Server is the central component that provides the web UI, REST API, and database orchestration logic. NDB Agent is the component that runs on each Nutanix cluster and communicates with the NDB Server to perform database operations. When NDB Multi-Cluster is enabled on Cluster A, it becomes the primary cluster that hosts the NDB Server VM. Cluster B, which is registered with NDB, becomes a secondary cluster that hosts only the NDB Agent VM. Therefore, Cluster A has both NDB Server and NDB Agent, while Cluster B has only NDB Agent. This configuration allows Cluster B to leverage the NDB service running on Cluster A for database management and automation.

NEW QUESTION # 35

An administrator manages an multi-cluster NDB instance with HA enabled. After failure, more than one API server VM is down. How should the administrator restore full functionality?

- A. Restart all database server VMs as NDB HA only tolerates single API server failure.
- B. Manually distribute connections across remaining clusters.
- C. Ensure at least one API server VM is online; the rest will recover automatically.
- D. Call Nutanix support to reset all API server connections.

Answer: C

Explanation:

In a multi-cluster NDB instance with HA enabled, the NDB architecture includes multiple API server VMs to ensure availability. If more than one API server VM is down after a failure, the administrator should ensure at least one API server VM is online. NDB's HA design tolerates multiple API server failures as long as one remains operational, and the remaining VMs will recover automatically through the HA failover mechanism. This leverages Nutanix's distributed architecture and self-healing capabilities to restore full functionality without manual intervention beyond ensuring one VM is running.

NEW QUESTION # 36

Which file format is available when downloading a list of alerts?

- A. xml
- B. xlsx
- C. csv
- D. pdf

Answer: C

Explanation:

When downloading a list of alerts from NDB, the available file format is csv (Comma-Separated Values). NDB provides this format

to export alert data (e.g., alert ID, timestamp, severity, description) in a structured, machine-readable way that can be easily imported into spreadsheet applications like Microsoft Excel or analyzed programmatically. This aligns with NDB's focus on operational efficiency and data portability.

NEW QUESTION # 37

An administrator wants to migrate an existing MSSQL Server database to NDB. How should the administrator complete this migration?

- **A. Provision a new database server VM and database then migrate the data.**
- B. Create a new database server VM and database then register it with NDB.
- C. Use Nutanix Move to migrate the database server VM.
- D. Backup your database VM and import it into Nutanix.

Answer: A

Explanation:

To migrate an existing Microsoft SQL Server (MSSQL) database to NDB, the recommended approach is to:

Provision a new database server VM and database: Use the NDB interface to provision a new VM and configure an MSSQL database instance on the Nutanix platform. This leverages NDB's automated provisioning capabilities to ensure compatibility with Nutanix infrastructure.

Migrate the data: Transfer the data from the existing MSSQL database to the newly provisioned database. This can be achieved using native MSSQL tools (e.g., backup/restore, log shipping, or replication) or NDB's data migration features, such as cloning or restoring from a backup, depending on the source environment.

NEW QUESTION # 38

.....

The world is changing rapidly and the requirements to the employees are higher than ever before. If you want to find an ideal job and earn a high income you must boost good working abilities and profound major knowledge. Passing NCP-DB-6.10 certification can help you realize your dreams. If you buy our product, we will provide you with the best Nutanix Certified Professional (NCP) study materials and it can help you obtain NCP-DB-6.10 certification. Our product is of high quality and our service is perfect.
