We can say that how many the AZ-204 certifications you get and obtain qualification certificates, to some extent determines your future employment and development, as a result, the AZ-204 exam guide is committed to helping you become a competitive workforce, let you have no trouble back at home. Actually, just think of our AZ-204 Test Prep as the best way to pass the exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time.

Microsoft AZ-204 Exam Overview:

Certification Vendor:	Microsoft
Exam Name:	Developing Solutions for Microsoft Azure
Exam Number:	AZ-204
Exam Format:	Case studies, Drag and drop, Build list, Multiple choice, Active screen
Available Languages:	Spanish, Korean, French, English, German, Chinese (Simplified), Japanese, Portuguese (Brazil)
Passing Score:	700
Exam Duration:	120 minutes
Related Certifications:	Microsoft Certified: Azure Developer Associate
Certificate Validity Period:	1 year
Real Exam Qty:	40–60
Exam Price:	USD 165
Recommended Training:	Microsoft Learn: AZ-204 Learning Path
Exam Registration:	Microsoft Certification Exam Registration Pearson VUE Scheduling
Sample Questions:	Microsoft AZ-204 Sample Questions
Exam Way:	Online proctored or onsite testing center
Pre Condition:	No formal prerequisites; recommended 2+ years programming experience, familiarity with Azure SDKs, CLI, PowerShell
Official Syllabus URL:	https://learn.microsoft.com/en-us/credentials/certifications/resources/study-guides/az-204

AZ-204 Reliable Study Material & AZ-204 Test Training Pdf & AZ-204 Valid Pdf Practice

If you are applying for the AZ-204 certification exam, it is great to show your dedication to it. You cannot take it for granted because the Developing Solutions for Microsoft Azure (AZ-204) certification test is tough and you have to pay a good sum for appearing in it. You will lose money and time by studying with AZ-204 Exam Preparation material that is not updated. So, to avoid your loss and failure in the AZ-204 exam, you must prepare with actual Microsoft AZ-204 questions from TestsDumps.

One of the benefits of earning the Microsoft Certified: Azure Developer Associate certification is that it can open up new job opportunities and increase your earning potential. According to PayScale, the average salary for an Azure developer is \$98,000 per year, with salaries ranging from \$70,000 to \$137,000. With the demand for Azure developers increasing, earning this certification can help you stand out in a competitive job market.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q619-Q624):

NEW QUESTION # 619

You are developing an Azure Web App. You configure TLS mutual authentication for the web app.

You need to validate the client certificate in the web app. To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Property	Value
Client certificate location	▼ HTTP request header Client cookie HTTP message body URL query string
Encoding type	▼ HTML URL Unicode Base64

Answer:

Explanation:

Property	Value
Client certificate location	▼ HTTP request header Client cookie HTTP message body URL query string
Encoding type	▼ HTML URL Unicode Base64

Reference:

<https://docs.microsoft.com/en-us/azure/app-service/app-service-web-configure-tls-mutual-auth>

NEW QUESTION # 620

You provision virtual machines (VMs) as development environments.

One VM does not have host.

The VM is stuck in a Windows update process. You attach the OS disk for the affected VM to a recovery VM.

You need to correct the issue.

In which order should you perform the actions? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Open C:\temp\Patch.txt file and locate the update that is in a pending.
- Run the following command at an elevated command prompt: `dism /image:Attached OS disk>:\ /.....`
- Run the following command at an elevated command prompt: `dism /image:Attached OS disk>:\ /.....`
- Detach the OS disk and recreate the VM.

Answer:

Explanation:

Answer Area

Run the following command at an elevated command prompt: `dism /image\get-packages>c:\temp\Patch.txt`.

Open C:\temp\Patch.txt file and locate the update the update that is in a pending.....

Run the following command at an elevated command prompt: `dism /image:Attached OS disk>:\ /.....`

Detach the OS disk and recreate the VM.

- 1 - Run the following command at an elevated command prompt: `dism /image\get-packages>c:\temp\Patch.txt`.
- 2 - Open C:\temp\Patch.txt file and locate the update the update that is in a pending.....
- 3 - Run the following command at an elevated command prompt: `dism /image:Attached OS disk>:\ /.....`
- 4 - Detach the OS disk and recreate the VM.

NEW QUESTION # 621

You develop a gateway solution for a public facing news API.

The news API back end is implemented as a RESTful service and hosted in an Azure App Service instance.

You need to configure back-end authentication for the API Management service instance.

Which target and gateway credential type should you use? To answer, drag the appropriate values to the correct parameters. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

NEW QUESTION # 622

You need to retrieve all order line items from Order.json and sort the data alphabetically by the city. How should you complete the code? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

SELECT li.id AS lineitemid, li.price

FROM

Orders o
LinItems li

JOIN

li
o

 IN

o.line_items
li.line_items
o.address

ORDER BY

o.address.city
li.address.city
o.city
li.city

 ASC

Answer:

Explanation:

SELECT li.id AS lineitemid, li.price

FROM

Orders o
LinItems li

JOIN

li
o

Topic 7, VanArsdel, Ltd

Current environment

Requirements

The application components must meet the following requirements:

Corporate website

- * Secure the website by using SSL
- * Minimize costs for data storage and hosting
- * Implement native GitHub workflows for continuous integration and continuous deployment (CI/CO).
- * Distribute the website content globally for local use.
- * Implement monitoring by using Application Insights and availability web tests including SSL certificate validity and custom header value verification.
- * The website must have 99.95 percent uptime.

Corporate website

The company provides a public website located at <http://www.vanaisdeltd.com>. The website consists of a React JavaScript user

interface, HTML, CSS, image assets, and several APIs hosted in Azure functions.

Retail store locations

- * Azure Functions must process data immediately when data is uploaded to Blob storage. Azure Functions must update Azure Cosmos DB by using native SQL language queries.
- * Audit store sale transaction information nightly to validate data, process sales financials, and reconcile inventory.

Delivery services

- * Store service telemetry data in Azure Cosmos DB by using an Azure Function. Data must include an item id, the delivery vehicle license plate, vehicle package capacity, and current vehicle location coordinates.

- * Store delivery driver profile information in Azure Active Directory (Azure AD) by using an Azure Function called from the corporate website.

Inventory services

The company has contracted a third-party to develop an API for inventory processing that requires access to a specific blob within the retail store storage account for three months to include read-only access to the data.

Security

- * All Azure Functions must centralize management and distribution of configuration data for different environments and geographies, encrypted by using a company-provided RSA-HSM key.
- * Authentication and authorization must use Azure AD and services must use managed identities where possible.

Retail Store Locations

- * You must perform a point-in-time restoration of the retail store location data due to an unexpected and accidental deletion of data.
- * Azure Cosmos DB queries from the Azure Function exhibit high Request Unit (RU) usage and contain multiple, complex queries that exhibit high point read latency for large items as the function app is scaling.

NEW QUESTION # 623

Case Study 8 - VanArsdel, Ltd

Background

VanArsdel, Ltd. is a global office supply company. The company is based in Canada and has retail store locations across the world. The company is developing several cloud-based solutions to support their stores, distributors, suppliers, and delivery services.

Current environment

Corporate website

The company provides a public website located at <http://www.vanarsdelltd.com>. The website consists of a React JavaScript user interface, HTML, CSS, image assets, and several APIs hosted in Azure Functions.

Retail Store Locations

The company supports thousands of store locations globally. Store locations send data every hour to an Azure Blob storage account to support inventory, purchasing and delivery services.

Each record includes a location identifier and sales transaction information.

Requirements

The application components must meet the following requirements:

Corporate website

- Secure the website by using SSL.
- Minimize costs for data storage and hosting.
- Implement native GitHub workflows for continuous integration and continuous deployment (CI/CD).
- Distribute the website content globally for local use.
- Implement monitoring by using Application Insights and availability web tests including SSL certificate validity and custom header value verification.
- The website must have 99.95 percent uptime.

Retail store locations

- Azure Functions must process data immediately when data is uploaded to Blob storage. Azure Functions must update Azure Cosmos DB by using native SQL language queries.
- Audit store sale transaction information nightly to validate data, process sales financials, and reconcile inventory.

Delivery services

- Store service telemetry data in Azure Cosmos DB by using an Azure Function. Data must include an item id, the delivery vehicle license plate, vehicle package capacity, and current vehicle location coordinates.
- Store delivery driver profile information in Azure Active Directory (Azure AD) by using an Azure Function called from the corporate website.

Inventory services

The company has contracted a third-party to develop an API for inventory processing that requires access to a specific blob within the retail store storage account for three months to include read-only access to the data.

Security

- All Azure Functions must centralize management and distribution of configuration data for different environments and geographies,

- Authentication and authorization must use Azure AD and services must use managed identities where possible.

Retail Store Locations

- ### Question

You need to implement event routing for retail store location data.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Answer Area

Microsoft

Event data

Configuration

Source

Azure Blob Storage

Azure Event Grid

Azure Service Bus

Azure Event Hub

Receiver

Azure Event Grid

Azure Event Hub

Azure Service Bus

Azure Blob Storage

Handler

Azure Function App

Azure Logic App

Azure Event Grid

Azure Blob Storage

Explanation:

Box 1: Azure Blob Storage

Azure event publishers and event handlers are at the core of the Event Grid routing-service.

Event Grid listens to Azure event publishers, such as Blog Storage, then reacts by routing specific events to Azure event handlers, such as WebHooks. You can easily control this entire process at a granular level through event subscriptions and event filters.

Box 2: Azure Event Grid

Azure Event Grid is a highly scalable event-routing service that listens for specific system events, then reacts to them according to your precise specifications.

In the past, event handling has relied largely on polling - a high latency, low-efficiency approach that can prove prohibitively expensive at scale.

Box 3: Azure Function App

Event Grid's supported event handlers currently include Event Hubs, WebHooks, Logic Apps, Azure Functions, Azure Automation and Microsoft Flow.
