### Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q269-Q274):

#### NEW QUESTION # 269

The four activities of continuous deployment are deploy, verify, monitor and

- A. learn
- B. test
- C. respond
- D. adapt

Answer: C

### NEW QUESTION # 270

What is one responsibility of the Scrum Master?

- A. To define the tasks and assign owners
- **B. To remove impediments in order to help protect the team**
- C. To prioritize the Team's Backlog
- D. To facilitate the PI Planning session

**Answer: B**

Explanation:

The Scrum Master is a servant leader and coach for the Agile team. One of their main responsibilities is to remove impediments that hinder the team's progress and performance. Impediments can be anything that blocks the team from delivering value, such as technical issues, dependencies, conflicts, or lack of resources.

The Scrum Master helps the team identify and resolve impediments as quickly as possible, and escalates them to the appropriate level if needed. By removing impediments, the Scrum Master helps the team stay focused, productive, and motivated. References: Exam Study Guide: SP (6.0) - SAFe Practitioner, [Scrum Master]

### NEW QUESTION # 271

How many are the Scrum events?

- A. depends on the length of the iteration
- **B. four**
- C. three
- D. seven

**Answer: B**

### NEW QUESTION # 272

How can a technical exploration Enabler be demonstrated?

- A. Demonstrate working systems in the production environment
- **B. Show the knowledge gained by the exploration**
- C. Exploration Enablers do not need to be demonstrated
- D. Show the acceptance tests written for the exploration

**Answer: B**

Explanation:

A technical exploration enabler is a type of enabler that supports research, prototyping, and other activities needed to develop an understanding of customer needs, including the exploration of prospective solutions and evaluation of alternatives<sup>1</sup>. A technical exploration enabler can be demonstrated by showing the knowledge gained by the exploration, such as the results of experiments, the insights from data analysis, the feedback from customers or stakeholders, the lessons learned from failures, or the recommendations for future actions<sup>2</sup>. Showing the knowledge gained by the exploration helps to validate the assumptions and hypotheses, measure the value and feasibility of the solution, and inform the decision-making process<sup>3</sup>. The other options are not valid ways to demonstrate a technical exploration enabler, as they either do not reflect the purpose of the exploration, or imply that the exploration is not necessary or valuable.
