

# Certification C\_S43\_2601 Exam Dumps, Cheap C\_S43\_2601 Dumps

It is important to solve more things in limited times, C\_S43\_2601 Exam have a high quality, Five-star after sale service for our SAP C\_S43\_2601 exam dump, the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) prepare torrent has many professionals, and they monitor the use of the user environment and the safety of the learning platform timely.

You will obtain these updates entirely free if the SAP C\_S43\_2601 certification authorities issue fresh updates. GuideTorrent ensures that you will hold the prestigious SAP C\_S43\_2601 certificate on the first endeavor if you work consistently, taking help from our remarkable, up-to-date, and competitive SAP C\_S43\_2601 dumps.

>> **Certification C\_S43\_2601 Exam Dumps** <<

## Cheap C\_S43\_2601 Dumps & C\_S43\_2601 Latest Braindumps Ppt

By concluding quintessential points into SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) practice materials, you can pass the exam with the least time while huge progress. Our experts are responsible to make in-depth research on the exams who contribute to growth of our C\_S43\_2601 practice materials. Their highly accurate exam point can help you detect flaws on the review process and trigger your enthusiasm about the exam. What is more, C\_S43\_2601 practice materials can fuel your speed and the professional backup can relieve you of stress of the challenge.

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q11-Q16):

### NEW QUESTION # 11

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Initiate and screen a Maintenance Notification
- \* Plan Maintenance Order and send it for approval
- \* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.

Use the following data:

- \* Screen and accept the just created Maintenance Notification.
- \* Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

\* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .

\* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request ).

\* Enter the Following Data :

\* Technical Object : T-PB48

\* Description : Defective pump (phase-based)

\* Current Location : Production Line 1

\* Detection Method : Continuous Condition Monitoring

\* Operational Effect : Production restricted

\* Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

\* Access the Fiori App : Open Screen Maintenance Requests .

\* Locate Your Notification : Find the notification you just created for T-PB48.

\* Perform Screening :

\* Review the details to ensure they are complete.

\* Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

\* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .

\* Enter Planning Data :

\* Technical Object : T-PB48

\* Operation 0010 Description : Repair damage

\* Operation 0010 Work : 2 h

\* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is

"Waiting for Approval"

## NEW QUESTION # 12

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

\* Create a Maintenance Work Center

\* Create a capacity demand for a Maintenance Work Center

\* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center

T-ME00 and save it. Use the following information:

\* Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- \* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- \* maintain the required capacity values
- \* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

□ Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Description = Mechanical Maintenance 42
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□ Step-by-step procedure

Step 1: Open work center creation

- \* Go to SAP GUI command field
- \* Enter transaction IR01
- \* Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Work Center Category = 0005
- \* In Copy from :
- \* Plant = 1010
- \* Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- \* select Capacities
- \* continue with the green check

This was important because the task required changing capacity-related data:

- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

□ Step 4: Maintain basic data

On the work center master screen:

- \* change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- \* No. Ind. Capacities = 5
- \* Capacity Base Unit = H
- \* Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- \* Start Time = 08:00:00
- \* End Time = 17:00:00
- \* Length of breaks = 01:00:00
- \* Capacity Utilization = 60
- \* No. Ind. Capacities = 5

This produced:

- \* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

- \* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

- \* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

- \* create a capacity demand of 1 hour

- \* for the newly created maintenance work center ZZ-ME42

- \* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

- \* In the command field, enter /nIW31

- \* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen , enter:

- \* Order Type = PM01

- \* Planning Plant = 1010

Then press Enter .

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01 .

Step 9: Enter order description

On the order header screen, enter a short text such as:

- \* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

- \* Operation = 0010

- \* Work Center = ZZ-ME42

- \* Plant = 1010

- \* Control Key = PM01

- \* Work Duration / Work = 1

- \* Unit = H

Then press Enter .

This operation is the actual source of the capacity demand .

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

- \* Click Save

SAP displayed the confirmation message:

- \* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

- \* Maintenance Work Center created

- \* Work Center = ZZ-ME42

- \* Plant = 1010

- \* confirmed by SAP message that the work center already existed when rechecked

- \* Capacity maintained correctly

- \* No. Ind. Capacities = 5

- \* Capacity = 24.00 H

- \* Capacity demand created

- \* maintenance order type PM01
- \* operation assigned to ZZ-ME42
- \* planned work = 1 H
- \* Order successfully saved
- \* SAP confirmation: Order saved with number 4000314

### NEW QUESTION # 13

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam.

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is an implicit part of the exam.

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

□ Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client 400 ). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (##)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ## in all instructions.

How to find your number:

\* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

\* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

- \* System : T41
- \* Client : 400
- \* User Name/ID : S43900-## (e.g., if your group number is 10, use S43900-10)
- \* Password : Welcome1

Connection Methods:

- \* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).
- \* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system.

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

- \* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.
- \* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.
- \* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.

□

#### NEW QUESTION # 14

Task 4: Configure and create Technical Objects

The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.

The following features need to be checked:

- \* Configure and create Functional Locations
- \* Create, serialize and install Equipment
- \* Create Functional Location master record ZZ0##-01 and save it. Use the following information:
  - \* Create Equipment master record EQUI-## and save it. Use the following information:
  - \* Serialize the just created Equipment master record EQUI-## . Use the following data:
  - \* Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

#### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 4: Configure and create Technical Objects

This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.

Step 1: Create Functional Location Master Record

A Functional Location represents the area at which a maintenance task is to be performed.

- \* Access the Transaction : Use transaction code IL01 (Create Functional Location).
- \* Enter Initial Data :
  - \* Functional Location : ZZ048-01.
  - \* Structure Indicator : ZZ48.
  - \* Functional Location Category : T.
  - \* Press Enter .
  - \* Enter General Data :
    - \* Description : Production Line Z48.
  - \* Enter Location and Organization Data :
    - \* Maintenance Plant : 1020.
    - \* Cost Center : 4110.
    - \* Planning Plant : 1020.
    - \* Planner Group : Z48.
    - \* Main WorkCtr : T-ME48.
    - \* Work Center Plant : 1010.
  - \* Save : Click the Save icon.

Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.

#### Step 2: Create Equipment Master Record

Equipment represents an individual physical object that is maintained as an autonomous unit.

\* Access the Transaction : Use transaction code IE01 (Create Equipment).

\* Enter Initial Data :

\* Equipment : EQUI-48.

\* Equipment Category : T.

\* Press Enter .

\* Enter General Data :

\* Description : Drive Motor GR48.

\* Save : Click the Save icon.

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

#### Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

\* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.

\* Navigate to Serial Data : Go to the SerData (Serial Data) tab.

\* Enter Serialization Data :

\* Material : T-PM8000.

\* Serial Number : EQUI-48.

\* Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

#### Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

\* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.

\* Modify Installation Location :

\* Click on the Structure tab.

\* Find the FunctLoc field.

\* Enter the location: 00-01-ASS-02.

\* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

### NEW QUESTION # 15

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

\* Configure a Maintenance Order Type and create a Maintenance Order

\* Create a Time Confirmation a Maintenance Order

\* Prepare a Maintenance Order for Completion

\* Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

Plan a Maintenance Order Operation and use the following information:

\* Create a Time Confirmation for the just created Maintenance Order. Use the following information:

\* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order,

plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

\* Access the Transaction : Use transaction code IW31 .

\* Initial Screen :

\* Order Type : PM01.

\* Notification : Enter your notification number (e.g., 10000147).

\* Press Enter .

\* Header Data :

\* The description "Pump is leaking" should pull in automatically.

\* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

\* Go to the Operations Tab .

\* Enter Planning Data :

\* Work : 2.

\* Unit (Un) : H (Hours).

\* Number : 1 (One person).

\* Duration (Dur.) : 2 / Unit : H.

\* Add Enhancement Data :

\* Click the Additional Data tab - > Enhancement sub-tab.

\* In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).

\* In the first text box ( Text 1 ), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The

"Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

\* Release : Look at the top toolbar and click the Green Flag icon .

\* Verify Status : The "Sys.Status" field should now include REL.

\* Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

\* Access the Transaction : Use transaction code IW41 .

\* Enter Data :

\* Order : Enter your order number (e.g., 4000395).

\* Actual Work : 2 H.

\* Check the boxes for Final Confirmation and No Remaining Work .

\* Confirmation Text : Pump repaired and tested.

\* Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

\* Access the Transaction : Use transaction code IW32 .

\* Complete Technically :

\* Go to menu: Order > Functions > Complete > Complete (technically) .

\* Click the Green Checkmark on the popup window.

\* Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.
