

# New Analytics-Admn-201 Free Exam Questions Free PDF | Professional Analytics-Admn-201 New Exam Bootcamp: Salesforce Certified Tableau Server Administrator

c. a series of "boxes" that allow for members of the audience to have the option to close windows in their "box" to shut out unwanted adjacent sounds.

d. a series of operable acoustical doors that open up into interstitial reverberation chamber rooms to extend the volume of the hall based on its performance.. Answer: d. a series of operable acoustical doors that open up into interstitial reverberation chamber rooms to extend the volume of the hall based on its performance.

© Select the correct pairing for the given blanks: The interior color scheme of Monticello in Charlottesville VA is based on a "character" quality of rooms. Predominant tones are assigned to the interiors of individual rooms in a sequence - starting with the entrance hall as \_\_\_\_\_ tones to the interior rooms as \_\_\_\_\_ tones.

- a. cool, warm
- b. dull, vibrant
- c. warm, cool
- d. vibrant, dull. Answer: a. cool, warm

© The Meridian Line at St Mary of the Angels and the Martyrs in Rome, Italy utilizes daylight to create the effect of a \_\_\_\_\_ on the interior of the basilica's floor.

- a. Symbol

P.S. Free & New Analytics-Admn-201 dumps are available on Google Drive shared by PassSureExam:

Our supporter of Analytics-Admn-201 study guide has exceeded tens of thousands around the world, which directly reflects the quality of them. Because the exam may put a heavy burden on your shoulder while our Analytics-Admn-201 practice materials can relieve you of those troubles with time passing by. Just spent some time regularly on our Analytics-Admn-201 Exam simulation, your possibility of getting it will be improved greatly.

## Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Migration &amp; Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.</li> </ul>

## Analytics-Admn-201 New Exam Bootcamp | Valid Analytics-Admn-201 Exam Materials

If you're looking to accelerate your career in the field of information technology, don't hesitate to take advantage of our top-notch Salesforce Analytics-Admn-201 practice material. What sets PassSureExam apart is our commitment to providing updated and actual Analytics-Admn-201 certification exam questions. Our dedicated team works hard to collect and update the Analytics-Admn-201 Exam Questions based on the latest exam sections. We closely observe the real Salesforce Analytics-Admn-201 content to ensure that our unique and error-free exam questions make your preparation successful.

### Salesforce Certified Tableau Server Administrator Sample Questions (Q40-Q45):

#### NEW QUESTION # 40

Which two types of content can you include in comments on a visualization? (Choose two.)

- A. Text
- B. Interactive snapshots of a view
- C. @mentions
- D. Images (jpg, png)

**Answer: A,C**

Explanation:

Comments on Tableau Server visualizations facilitate collaboration. Let's explore what's supported:

\* Comments Feature: Enabled per site (Settings > General > Allow Comments). Users with "Add Comment" permission can post on views.

\* Option B (Text): Correct.

\* Details: The primary content type-users type free-form text in the comment box.

\* Use: Notes, questions, or feedback (e.g., 'Sales spiked here-why?').

\* Option C (@mentions): Correct.

\* Details: Typing @username notifies the mentioned user via email or the UI (if notifications are enabled).  
\* Use: Directs comments to specific people (e.g., "@John, check this trend").  
\* Option A (Interactive snapshots of a view): Incorrect.  
\* Details: Snapshots (static images) aren't supported in comments-users must take screenshots externally and can't embed them interactively.  
\* Option D (Images - jpg, png): Incorrect.  
\* Details: No attachment or image embedding in comments-text and mentions only. Workaround: Link to an image hosted elsewhere.  
Why This Matters: Comments enhance teamwork, but their simplicity (text + mentions) keeps the interface lightweight and focused.  
Reference: Tableau Server Documentation - "Comment on a View" (<https://help.tableau.com/current/server/en-us/comment.htm>).

## NEW QUESTION # 41

You have a server that contains 16 processor cores. What is the default number of VizQL instances configured by the installer?

- A. 0
- **B. 1**
- C. 2
- D. 3

### Answer: B

Explanation:

The VizQL Server process in Tableau Server handles rendering visualizations and processing queries for users viewing dashboards or workbooks. During installation, Tableau Server automatically configures the number of VizQL instances based on the number of processor cores on the machine, following this rule:

Default VizQL instances = 2 per node, unless manually adjusted post-installation.

In multi-node setups, additional instances may be added based on core count, but the question specifies a single server with 16 cores.

The installer does not scale VizQL instances linearly with core count by default (e.g., it doesn't set 1 instance per 4 cores). Instead: For a single-node installation, the default is 2 VizQL instances, regardless of core count (assuming the minimum hardware requirements are met: 8 cores, 32 GB RAM).

Administrators can later adjust this using TSM (e.g., tsm topology set-process) based on performance needs, but the question asks for the default configured by the installer.

Option A (4): Incorrect. Four instances might be configured manually for a 16-core server, but it's not the default.

Option B (6): Incorrect. Six instances exceed the default for a single node.

Option C (10): Incorrect. Ten instances are far beyond the default and would require manual configuration.

Option D (2): Correct. The installer sets 2 VizQL instances by default on a single-node installation.

Reference: Tableau Server Documentation - "Server Process Settings" (<https://help.tableau.com/current/server/en-us/processes.htm>).

## NEW QUESTION # 42

What two events must occur for Tableau Server to recompute queries for a workbook cache after a scheduled refresh? (Choose two.)

- A. The workbook was published in the last month
- **B. The workbook has been viewed recently**
- C. The All Users group has a permission rule allowing access to the workbook
- **D. The workbook has upcoming scheduled refresh tasks**

### Answer: B,D

Explanation:

Tableau Server uses caching to speed up workbook loading by storing query results. After a scheduled extract refresh updates the data, the cache may need recomputing-let's dive into the mechanics:

\* Caching Basics:

\* VizQL Cache: Stores rendered views and query results for faster access.

\* Refresh Trigger: A scheduled refresh updates the underlying extract (.hyper), but the cache isn't automatically invalidated-it's demand-driven.

\* Recompute Conditions: Tableau recomputes the cache when the workbook is accessed (viewed) and its data has changed (e.g., via refresh).

\* Evaluation:

- \* Option B (The workbook has upcoming scheduled refresh tasks): Correct.
- \* Why: An upcoming refresh task indicates the workbook relies on an extract with a schedule. After the refresh runs, the data changes, priming the cache for recomputation on next view. Without a schedule, no refresh occurs, so this is a prerequisite.
- \* Detail: Schedules are set in Schedules > Tasks-e.g., "Daily at 2 AM."
- \* Option D (The workbook has been viewed recently): Correct.
- \* Why: Viewing triggers cache recomputation if the data has changed (e.g., post-refresh).

Tableau uses a "lazy caching" model-cache updates only when a user loads the workbook, ensuring fresh results.

\* Detail: "Recently" isn't strictly defined but implies post-refresh access.

\* Option A (Published in the last month): Incorrect.

\* Why: Publish date is irrelevant-cache recomputation ties to data changes and access, not publication timing.

\* Option C (All Users group has permission rule allowing access): Incorrect.

\* Why: Permissions enable viewing, but recomputation requires actual access (viewing) and a refresh event, not just potential access.

Why This Matters: Caching balances performance and freshness-understanding triggers prevents stale data surprises.

Reference: Tableau Server Documentation - "Caching and Performance" ([https://help.tableau.com/current/server/en-us/perf\\_cache.htm](https://help.tableau.com/current/server/en-us/perf_cache.htm)).

### NEW QUESTION # 43

What should you do to disable table recommendations for popular data sources and tables to users?

- A. Disable the option using the server Settings page
- B. Use the command: tsm configuration set -k recommendations.enabled -v false
- **C. Disable the option using the site Settings page**
- D. Publish data sources only to projects with permissions locked to the project

#### Answer: C

Explanation:

Table recommendations in Tableau Server suggest popular tables and data sources to users when they create new content in the web authoring environment. This feature is enabled by default but can be disabled at the site level.

Option A (Disable the option using the site Settings page): Correct. A site administrator can disable table recommendations by navigating to the site's Settings > General page in the Tableau Server web interface and unchecking the option "Enable table recommendations." This prevents users on that site from seeing these suggestions, offering a straightforward UI-based solution.

Option B (Use the command: tsm configuration set -k recommendations.enabled -v false): Incorrect. There is no recommendations.enabled key in the TSM configuration settings. This feature is managed per site, not server-wide via TSM.

Option C (Publish data sources only to projects with permissions locked): Incorrect. Locking permissions restricts access but doesn't disable the recommendation feature itself. Users with access would still see recommendations.

Option D (Disable the option using the server Settings page): Incorrect. Table recommendations are a site- specific setting, not a server-wide setting. The server Settings page (via TSM) controls global configurations, not this feature.

Reference: Tableau Server Documentation - "Manage Site Settings" ([https://help.tableau.com/current/server/en-us/site\\_settings.htm](https://help.tableau.com/current/server/en-us/site_settings.htm)).

### NEW QUESTION # 44

What account should you use to run the Tableau Server installation program?

- A. A local user account
- B. An NT AUTHORITY\NetworkService account
- C. A domain user account
- **D. An account in the local administrator group**

#### Answer: D

Explanation:

Installing Tableau Server on Windows requires an account with sufficient privileges to configure services, write to the file system, and manage registry settings. Let's analyze this in depth:

\* Installation Requirements:

\* The installer creates services (e.g., Tableau Server Gateway), writes to Program Files and ProgramData, and configures TSM.

- \* It needs local administrative privileges on the machine to perform these tasks.
  - \* Post-install, a "Run As" account can be set for services (e.g., NT AUTHORITY\NetworkService), but this is separate from the install account.
  - \* Option C (An account in the local administrator group): Correct.
  - \* Why: The account must be in the local Administrators group to:
    - \* Install software (UAC elevation).
    - \* Configure services and ports.
    - \* Write to protected directories (e.g., C:\Program Files\Tableau).
  - \* Examples: A local admin (e.g., Administrator) or a domain user added to the Administrators group (e.g., DOMAIN\AdminUser).
  - \* Process: Log in as this account, run the installer, and provide TSM admin credentials during setup.
  - \* Option A (A local user account): Incorrect.
    - \* A standard local user (not in Administrators) lacks permissions-installation would fail with "Access Denied" errors.
    - \* Option B (A domain user account): Incorrect unless clarified.
      - \* A domain user without local admin rights can't install. If it's in the Administrators group, it qualifies, but C is more specific.
    - \* Option D (NT AUTHORITY\NetworkService): Incorrect.
  - \* This is a built-in service account for running services (default "Run As" post-install), not for executing the installer-an interactive user account is required.

## NEW QUESTION # 45

• • • • •

Due to lots of same products in the market, maybe you have difficulty in choosing the Analytics-Admn-201 guide test. We can confidently tell you that our products are excellent in all aspects. You can directly select our products. Firstly, we have free trials of the Analytics-Admn-201 exam study materials to help you know our products. One of the great advantages is that you will soon get a feedback after you finish the exercises. So you are able to adjust your learning plan of the Analytics-Admn-201 Guide test flexibly. We hope that our new design can make study more interesting and colorful. You also can send us good suggestions about developing the study material.
